

**VASAVI COLLEGE OF ENGINEERING(AUTONOMOUS)**

**Ibrahimbagh, Hyderabad-31**

Approved by A.I.C.T.E., New Delhi and  
Affiliated to Osmania University, Hyderabad-07

**Sponsored by  
VASAVI ACADEMY OF EDUCATION  
Hyderabad**

**STUDENT HAND BOOK  
ACADEMIC REGULATIONS (AUTONOMOUS) AND SYLLABI OF  
THIRD YEAR B.E (ECE) w.e.f 2016-17**

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION  
ENGINEERING**

+91-40-23146040, 23146041  
Fax: +91-40-23146090  
Website: [www.vce.ac.in](http://www.vce.ac.in)

**DEPARTMENT VISION**

Striving for excellence in teaching, training and research in the areas of Electronics and Communication Engineering

**DEPARTMENT MISSION**

To inculcate a spirit of scientific temper and analytical thinking, and train the students in contemporary technologies in Electronics & Communication to meet the needs of the industry."

**PROGRAM EDUCATIONAL OBJECTIVES**

- PEO I: To provide the required foundation in mathematics and engineering sciences that will enable the graduates to identify, analyze and solve engineering problems.
- PEO II: To impart in-depth knowledge and training in Electronics and Communication Engineering and help them succeed in their careers, higher education and research.
- PEO III: To inculcate professional and ethical values in the graduates to excel individually and in multi-disciplinary teams to solve engineering and societal problems.
- PEO IV: To provide the graduates with an environment that is conducive for developing excellence in leadership and encourage lifelong learning.

## ABOUT THE COLLEGE

### VISION

*Striving for a symbiosis of technological excellence and human values*

Established in 1981 by Vasavi Academy of Education under the stewardship of Late Sri Pendekanti Venkata Subbaiah, a veteran statesman of independent India and by a few eminent people from

different walks of life Vasavi College of Engineering represents a rich tradition of excellence in technology based education in a stimulating environment. From a modest beginning with just three undergraduate programs, viz., B.E. degree programs in Civil, Mechanical and Electronics & Communication Engineering, with dedicated efforts for over **33** years, it has now grown into a mighty center of learning with excellent and well-developed infrastructural facilities, offering 6 undergraduate programs, viz., B.E. in Civil, Mechanical, Electrical & Electronics, Electronics & Communication Engineering, Computer Science & Engineering, and Information Technology, in addition to a 3-year postgraduate program in Computer Applications (MCA), and 2-Year Postgraduate Programmes in CSE, ECE, EEE and Mechanical Engineering.

All the undergraduate (B.E) programs were accredited by National Board of Accreditation (NBA) for the academic years 2013-2015. The college sought fresh approval for NBA accreditation for two eligible PG

programs and MCA program. The college has been recognized under 12(B) and 2(f) sections of the University Grants Commission (UGC).

The college has been granted **autonomy by the University Grants Commission**, New Delhi and Osmania University, Hyderabad for all the programs it offers for a period of six years with effect from 2014-15.

### MISSION

*To arm the young brains with competitive technology and nurture the holistic development of the individuals for a better tomorrow.*

The College has 185 highly qualified and experienced faculty members consisting of Professors, Associate Professors and Assistant Professors and around **158** technical and supporting staff. The college has very good infrastructural facilities which go beyond the curriculum requirements. The college offers value-added courses in GIS, CAD/CAM, DSP, VLSI, Networking, J2EE and communication skills to bridge the gap between the curriculum and the requirements of the Industry. Finishing school has been made part of curriculum from the second year onwards to improve the skills of the students.

A Research & Development (R&D) Cell is established by personnel from industry / research organization to encourage the faculty and the students in acquiring additional qualifications and knowledge.

This Cell also facilitates the faculty for interaction with industry/research organizations in getting sponsored

research projects. In addition, the college extends consultancy in various fields of engineering and technology. The Center for Counseling and Placement at Vasavi College of Engineering provides personal and career-related support to its students. The educational experience at the college is enlivened and enriched by an array of extra-curricular activities to fulfill the cultural and emotional needs of students.

A good number of ranks in university examinations are secured by our students every year. The all-round development of a student is achieved by exposing him/her to the outside world in a systematic and well planned manner. Just not marks and ranks, but also ethics and morals are incorporated into psyche of a student at Vasavi in a cautious way. This unification of tradition and technology makes Vasavi a place for paradise of learning.

### QUALITY POLICY

*Education without quality is like a flower without fragrance. It is our earnest resolve to strive towards high standards of teaching, training and developing human resources.*

**ACADEMIC RULES AND REGULATIONS  
FOR FOUR YEAR B.E DEGREE COURSE  
w.e.f 2016-17 Academic Year**

**1. RULES OF PROMOTION**

**ATTENDANCE:** The *minimum aggregate attendance* percentage for BE program **is 75%**. On medical grounds 65% attendance with valid medical certificate will be considered. A candidate who did not meet above attendance requirements is not eligible to appear for the semester examinations.

*A student is allowed to use medical condonation facility only 4 (four) times in the entire period of 8 semesters in the span of 4 years B.E program.*

**2. ASSESSMENT AND EVALUATION SYSTEM:**

There will be continuous and comprehensive evaluation of students. The distribution of sessional (internal) and semester examination marks for **B.E program** are given below:

**SESSIONALS EXAMS (internals)**

**Theory: 30 Marks**

- **20** Marks each for two internal examinations in a semester and 10 marks for assignments and quizzes etc together.
- **Average of two tests** will be considered for calculating internal exams marks to which assignment/quiz marks will be added for obtaining total CIE marks.
- Every student should secure a **minimum of 40% aggregate marks in the internal exams.**

**Lab: 25 Marks**

- **15** marks for day-to-day laboratory class work which will be awarded based on the average of all experiments.
- **10** marks for the internal examination.

**SEMESTER EXAMS**

- Semester theory examinations will be conducted for 70 marks. A student should secure a minimum of 40% marks in each subject for a pass.
- Semester laboratory examinations will be conducted for 50 marks. A student should secure a minimum of 50% marks for a pass. In addition, a student shall secure a minimum of 40% marks in a theory subject and 50% marks in lab from sessional exams and semester examinations put together for a pass.

**3. PROMOTION RULES TO NEXT HIGHER CLASS**

S No	Semester/Class	Conditions to be fulfilled for
1	From 1/4 BE, I-SEM to 1/4 BE, II-SEM	Regular course of study of 1/4 B.E, I-SEM and 40% aggregate sessional marks in I-SEM
2	From 1/4 BE, II-SEM to 2/4 BE, I SEM	(a) Regular course of study of 1/4 B.E-II SEM and (b) Must have secured at least 50% of total credits prescribed for 1/4 B.E.
3	From 2/4 BE, I-SEM to 2/4 BE, II-SEM	Regular course of study of 2/4 BE, I-SEM and 40% aggregate sessional marks in II- SEM
4	From 2/4 BE, II-SEM to 3/4 BE, I SEM	(a) Regular course of study of 2/4 BE II SEM (b) Must have secured at least 50% of total credits prescribed for 2/4B. E and passed in all the subjects 1/4 B.E.
5	From 3/4 BE, I-SEM to 3/4 BE, II-SEM	Regular course of study of 3/4 B.E, I-SEM, and 40% aggregate sessional marks in I- SEM
6	From 3/4 BE, II-SEM to 4/4 BE, I SEM	(a) Regular course of study of 3/4 B.E, II-SEM (b) Must have secured at least 50% of total credits prescribed for 3/4 B.E and passed in all the subjects 2/4 B.E.
7	From 4/4 BE, I-SEM to 4/4 BE, II-SEM	(a) Regular course of study of 4/4 B.E, I-SEM and 40% aggregate sessional marks in II- SEM

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E - I SEMESTER**  
**LINEAR INTEGRATED CIRCUITS AND APPLICATIONS**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3010

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will acquire the knowledge of linear IC applications and design various circuits using IC's for any given specifications.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Describe and analyze the internal circuits, parameters. Features of op-amp.</li> <li>Design and analyze various applications of linear IC's 555, &amp; 723 IC's</li> <li>Distinguish various voltage regulators, analog to digital converters and digital to analog converters.</li> </ul>

**UNIT – I**

Differential Amplifiers: Classification, DC and AC analysis of single/dual input Balanced and unbalanced output Configurations using BJTs. Level Translator. Operational Amplifier: Op-amp Block Diagram, ideal Op-amp Characteristics, op-amp and its features, Op-Amp parameters & Measurements, Input and Output Offset voltages and currents, Slew Rate, CMRR, PSRR. Frequency Response and Compensation techniques.

**UNIT – II**

Op-amp Applications I: Inverting and Non-inverting Amplifiers with ideal and non-ideal

Op-amps, Voltage Follower, Difference Amplifier, Summing Amplifier, Ideal and Practical Integrator, Differentiator, V to I and I to V converters, Instrumentation Amplifier, Sample and Hold Circuit, Log and Antilog amplifiers, Precision Rectifiers.

**UNIT – III**

Op-amp Applications II: Schmitt Trigger with and without reference voltage, Astable Multivibrator, Monostable multivibrator, Triangular waveform generator.

Active Filters: Introduction, Butterworth 1<sup>st</sup> order, 2<sup>nd</sup> order low pass and high pass filters. Wide and Narrow Band-pass, Band-reject and All-pass filters.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -I SEMESTER**  
**DIGITAL INTEGRATED CIRCUITS AND APPLICATIONS**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3020

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Student shall describe specifications of a digital IC for various logic families and design combinational and sequential circuits with digital ICs.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Define specification of digital ICs</li> <li>Classify various logic families and summarize their features.</li> <li>Identify combinational, sequential circuits, memories and reconstruct them using digital ICs.</li> </ul>

**UNIT – I**

Manufacturer's designations for integrated circuits, Development of integrated circuits, Integrated circuit package types, Pin identifications and temperate ranges, IC characteristics, Introduction to diode and transistor logic families. TTL logic family, TTL series, Output configurations, Open Collector, Totem pole, Tri State logic.

**UNIT – II**

Concept of negative logic, ECL logic family, MOS logic family (pMOS and nMOS) CMOS logic family and its characteristics, CMOS transmission gate (bilateral switch), and its applications, CMOS open drain and high impedance outputs. Dynamic MOS logic family, dynamic MOS inverter, dynamic NAND and NOR gates, Comparison of various logic families. Interfacing of CMOS and TTL driving CMOS ECL driving TTL and TTL driving ECL.

**UNIT – III**

Design using TTL-74XX and CMOS 40XX series: Demultiplexers, drivers for LED and LCD displays, Multiplexers and their applications, Parity generators and Checker circuits, Digital Comparator and Digital. Parallel and serial binary adder/subtractor circuits using 2's compliment, Multiplier, Decimal adder, look-ahead adder.

**UNIT – IV**

Flip-flops and their conversions, Design of Synchronous and Asynchronous counters, Decade Counters, Cascading of BCD counters, application of counters, Shift register and applications, Familiarity with 74 XX and CMOS 40XX series of IC Counters. Sequence detector.

**UNIT – IV**

Timer: Introduction to 555 timer and its functional diagram, Monostable, Astable and Schmitt Trigger applications.

IC Function Generator: Analysis and Design of Function Generators using IC 8038 Voltage Controlled Oscillator: Operation and Applications using IC 566.

Phase Locked Loops: Introduction, Principles, Block Schematic and Description of IC 565, Applications of PLL: Frequency multiplication and frequency synthesis.

**UNIT – V**

IC Regulators: Introduction, Analysis and design of regulators using 78XX and 723 monolithic ICs, Current limiting and Current foldback techniques using IC 723.

Data Converters: Introduction, basic Digital to Analog Converter techniques, Weighted Resistor DAC, Inverted R-2R Ladder DAC. Analog to Digital Converter: Types; Parallel Comparator ADC, Successive Approximation ADC and Dual Slope ADC. DAC and ADC specifications.

**Suggested Reading:**

1. David A. Bell, "Operational Amplifiers and Linear ICs," 3/e, Oxford Publications, 2011.
2. Roy, Chowdhury D., & Jain, Shail B., "Linear Integrated Circuits," 4/e, New Age International Publishers, 2010.
3. Sergio Franco, "Design with Operational Amplifiers and Analog Integrated Circuits," 3/e, TMH, 2008.
4. Ramakant A. Gayakwad, "Op-Amps and Linear Integrated Circuits," 4/e, PHI, 2010.
5. K.R.Botkar, "Integrated Circuits," 10/e, Khanna Publishers, 2010.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -I SEMESTER  
ANALOG COMMUNICATION**

**UNIT – V**

ROM, PROM, EPROM, EEPROM, RAM, Types, Architectures, operation and applications, NVRAM, Flash memory, CCD. Expanding word size and capacity. ASICs, Introduction to PLD's, Architectures of PAL, PLA with operation.

**Suggested Reading:**

1. Ronald J. Tocci, Neal S. Widmer & Gregory L. Moss, "*Digital Systems: Principles and Applications*," PHI, 10/e, 2009.
2. Jain R.P., "*Modern Digital Electronics*," 3/e, TMH, 2003.
3. Sonde, B. S., "*Introduction to system Design using IC's*," Wiley, 2/e, 1994.
4. Morris R L and Miller J R, "*Designing with TTL Integrated Circuits*," TMH, 1971.

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3030

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>• To understand different types of analog modulation schemes employed in transceivers and evaluate their performance.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>• Demonstrate of various analog modulation schemes.</li> <li>• Describe different types of analog receiver blocks.</li> <li>• Estimate the performance characteristics of analog communication systems.</li> </ul>

**UNIT – I**

Linear Modulation schemes: Need for modulation, double side band suppressed carrier (DSB-SC) modulation, conventional Amplitude Modulation (AM). Hilbert transform, properties of Hilbert transform. Pre-envelop. Complex envelop representation of band pass signals, In-phase and Quadrature component representation of band pass signals. Low pass representation of band pass systems. Single side band (SSB) modulation and Vestigial-side band (VSB) modulation. Modulation and demodulation schemes

**UNIT – II**

Angle modulation schemes: Frequency Modulation (FM) and Phase modulation (PM), Concept of instantaneous phase and frequency. Types of FM modulation: Narrow band FM and wide band FM. FM spectrum in terms of Bessel functions. Direct and indirect (Armstrong's) methods of FM generation. Balanced discriminator, Foster–Seeley discriminator and Ratio detector for FM demodulation. Pre-Emphasis and De-Emphasis. Capture effect.

**UNIT – III**

Transmitters and Receivers: Classification of transmitters. High level and low level AM transmitters. FM transmitters. Principle of operation of Tuned radio frequency (TRF) and super heterodyne receivers. Selection of RF amplifier. Choice of Intermediate frequency. Image frequency and its rejection ratio, Receiver characteristics: Double spotting, Tracking and alignment, Automatic Gain Control.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -I SEMESTER**  
**MICROPROCESSORS AND MICROCONTROLLERS**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3040

**UNIT – IV**

Noise Sources and types. Atmospheric noise, Shot noise and thermal noise. Noise temperature. Noise in two-port network: noise figure, equivalent noise temperature and noise bandwidth. Noise figure and equivalent noise temperature of cascade stages. Narrow band noise representation. S/N ratio and Figure of merit calculations in AM, DSB-SC, SSB and FM systems.

**UNIT – V**

Analog pulse modulation schemes: Sampling of continuous time signals. Sampling of low pass and band pass signals. Types of sampling. Pulse Amplitude Modulation (PAM) generation and demodulation. Pulse time modulation schemes: PWM and PPM generation and detection.

**Suggested Reading:**

1. Simon Haykin, "Communication Systems," 4/e, Wiley India, 2011.
2. Herbert Taub, Donald L. Shilling & Goutam Saha, "Principles of Communication Systems," 3/e, TMH, 2008.
3. P. Ramakrishna Rao, "Analog Communication," 1/e, TMH, 2011.
4. A. Bruce Carlson and Paul B. Crilly, "Communication Systems," 5/e, 2011.
5. Singh, R.P. and Sapre, S.D., "Communication Systems," TMH, 2007.

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>• Students will acquire knowledge about the architecture of various processors &amp; 8051 controller interfacing 8086, 8051 with various I/O peripherals &amp; memory to do a particular task.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>• Understand an architectures of various processors</li> <li>• Interface various I/O peripherals and memory to a processor.</li> <li>• Develop a microprocessor based prototype for a particular application.</li> </ul>

**UNIT – I**

8086/8088 Architecture and Instruction set: Minimum and Maximum mode operations, 8086 control signal interfacing under minimum mode system, control signal interfacing under maximum mode using multiprocessing systems. Addressing modes, Interrupt structure, Instruction formats, Instruction execution timings. Brief overview of x86 series microprocessors.

**UNIT – II**

8086 Assembly Language programming: Assembler directives and operators, programs using data transfer, arithmetic, logical, Branching and ASCII instructions. String processing, Procedures, Macros and stack, Basic programs using DOS functions. Introduction to assemblers and debugging tools.

**UNIT – III**

8086 Interfacing: Memory interfacing using standard RAM, EPROM IC Chips, 8255 PPI, 8253/8254 programmable interval timers, need for DMA and interfacing with DMA controller (8257 IC), Keyboard & display controller (8279) interfacing, programmable communication interface (8251). Serial and parallel data transmission formats, USART interfacing.

#### UNIT – IV

8051 Microcontroller: Classification, Internal architecture of 8051 and its pin configuration, Memory organization and expansion. 8051 instruction set, addressing modes and bit addressable features. Data transfer, arithmetic, logical and branching groups. Interrupt and I/O port structures and their operations. Assembly language Programming with 8051. 8051 timer and counter and its programming.

#### UNIT – V

Interfacing and Applications: 8051 Serial data communication and interrupt programming. 8051 Interfacing with external memory, expansion of I/O ports. A/D converter, D/A converter, Seven- segment display, LCD module, Keyboard and Stepper Motor interfacing with 8051.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -I SEMESTER**  
**AUTOMATIC CONTROL SYSTEMS**

Instruction: 3 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3050

Course Objective:	Course Outcomes
<ul style="list-style-type: none"><li>• Students will understand the types of control systems, frequency domain specifications and state models. Learn to find the transfer function gain margin, phase margin and stability of control systems.</li></ul>	<b>At the end of the course students will be able to:</b> <ul style="list-style-type: none"><li>• Apply block diagram rules and mason's gain formula to calculate transfer function of control systems.</li><li>• Apply root locus techniques. Bode plot and Nyquist plot to analyze the stability of control systems.</li><li>• Apply properties of state transition matrix and analyze controllability and observability of digital control systems.</li></ul>

#### UNIT – I

Control System fundamentals and Components: Classification of control systems, Open and Closed loop systems, Error sensing devices – potentiometers and syncros. AC and DC servo motors. Mathematical modeling of mechanical systems and their conversion into electrical systems. Block diagram reduction and Signal flow graphs.

#### UNIT – II

Time response: Transfer function and Impulse response, types of input. Transient response of second order system for step input. Time domain specifications. Types of systems, static error coefficients, error series, Routh - Hurwitz criterion for stability.

Root locus techniques: Analysis of typical systems using root locus techniques. Effect of location of roots on system response.

#### UNIT – III

Frequency response plots: Bode plots, frequency domain specifications. Gain margin and Phase Margin. Principle of argument, Polar plot, Nyquist plot and Nyquist criterion for stability. Compensation: Cascade and feedback compensation using Bode plots. Phase lag, lead, lag-lead compensators. PID controller.

#### UNIT – IV

Discrete Control Analysis: Digital control, advantages and disadvantages, and digital control system architecture. The discrete transfer function. Sampled data system. Transfer function of sample data systems. Stability of Discrete data systems.

#### UNIT – V

State Space Representation: Concept of state and state variables. State models of linear time invariant systems, State transition matrix, Solution of state equations. Design of digital control systems using state-space concepts. Controllability and observability.

5. Gopal, Madan, "Digital Control Engineering," 1/e, New Age Publishers, 2008.

With effect from the A.Y 2016-17

### DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING SYLLABUS FOR III/IV B.E -I SEMESTER ELECTRONIC INSTRUMENTATION

Instruction: 3 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hours	Subject Ref Code: EC3060

Course Objective:	Course Outcomes
<ul style="list-style-type: none"><li>• The students will be able to understand basic measurement concepts, concepts of electronic measurements, importance of signal generators and signal analyzers in measurements, relevance of digital instruments in measurements, the need for data acquisition systems, measurement techniques in biomedical field.</li></ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"><li>• Identify different characteristics of instruments and errors in measurements.</li><li>• To use modern instruments for measurements.</li><li>• Demonstrate working principle and usage of medical instruments.</li><li>• Modeling of various applications in virtual instrumentation.</li><li>• Analyze various voltmeters, CRO, spectrum analyzer.</li></ul>

#### UNIT – I

Accuracy, Precision, Resolution and Sensitivity. Errors and their types. Standards of measurement, classification of standards, IEEE standards, Elements of ISO 9001, Quality management standards.

#### UNIT – II

Transducers: classification, factors for selection of a transducer, transducers for measurement of velocity, acceleration, force, radio activity, Hot wire anemometer. Passive electrical transducers- Strain gauges and strain measurement, LVDT and displacement measurement, capacitive transducer and thickness measurement. Active electrical transducers: Piezo electric, photo conductive, photo voltaic and photo emissive transducers.

#### UNIT – III

Characteristics of sound, pressure, power and loudness measurement. Microphones and their types. Temperature measurement, resistance wire thermometers, semiconductor thermometers and thermocouples. Humidity measurement, resistive capacitive, aluminum oxide and crystal Hygrometer types.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -I SEMESTER**  
**FINISHING SCHOOL – III : TECHNICAL SKILLS BASICS OF JAVA**

Instruction: 2 Periods per week	Sessionals: 15 Marks	SEM Exam Marks:35 Marks
Credits:01	SEM Exam Duration: 1.5Hrs	Subject Ref Code: EC3070

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>students will be able to create Java programs that leverage the object-oriented features of the Java language, use data types, arrays and other data collections; implement error-handling techniques using exception handling and develop technical skills necessary for a complete understanding of front-end web development</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Analyze the semantics of HTML, Java script.</li> <li>Interpret the different parts of a web page.</li> <li>Interpret the Java SDK environment to create, debug and run simple Java programs.</li> <li>Apply fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.</li> <li>Demonstrate understanding of applets, events and keywords.</li> </ul>

**UNIT – I**

HTML for Java Programmers: Introduction to Internet. HTML, HTML format, HTML tags, the applet tag, HTML Document Creation. Introduction to scripting languages VBScript and Java Script.

**UNIT – II**

Overview of Java, Features of Java, Java tools, Java applications, The Java language: Java keywords, Primitive types, Literals, Arrays, Operators, and Control Operations: Selection, Iteration, Jumping.

**UNIT – III**

Java Classes class inheritance

Exception handling, working with Threads: Thread basics, Thread classes, Creating Threads, scheduling and Thread Priorities, Daemons, Grouping threads, Thread states, Synchronization, Packages.

**UNIT – IV**

Java Applets, Programming the user interface: Introduction and Basic Concepts, Abstract Window Toolkit (AWT), Drawing, Interactive Interface Elements, Organizing Interface with Layouts, Images, Windows, Frames, Dialog Box, and File Dialog Box

**UNIT – IV**

Block diagram, specification and design considerations of different types of DVMs. Digital LCR meters, Spectrum analyzers. The IEEE488 or GPIB Interface and protocol.

Delayed time base oscilloscope, Digital storage oscilloscope, and mixed signal oscilloscope. Introduction to virtual instrumentation, SCADA. Data acquisition system block diagram

**UNIT-V**

Biomedical Instrumentation: Human physiological systems and related concepts. Bio-potential electrodes Bio-potential recorders - ECG, EEG, EMG, X-ray machines and CT scanners, magnetic resonance and imaging systems, Ultrasonic Imaging systems.

**Suggested Reading:**

1. Albert D. Helfric, and William D. Cooper, "*Modern Electronic Instrumentation and Measurement Techniques*", PHI, 2010.
2. H S Kalsi, "*Electronic Instrumentation*", 3/e, TMH, 2011.

## DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING SYLLABUS FOR III/IV B.E -I SEMESTER FINISHING SCHOOL – III : SOFT SKILLS

Instruction: 2 Periods per week	Sessionals: 15 Marks	SEM Exam Marks:35 Marks
Credits:01	SEM Exam Duration: 1.5 Hrs	Subject Ref Code: HS 3110

Course Objective:	Course Outcomes
This is a foundation course and aims at enhancing employability skills in students. Students will be introduced to higher order thinking skills and problem solving on the following areas - Arithmetic ability, Numerical ability and General reasoning. Students will be trained to work systematically with speed and accuracy while problem solving. The three major areas covered in this course include <ol style="list-style-type: none"><li>1. Numerical Ability</li><li>2. Arithmetic Ability</li><li>3. General reasoning</li></ol>	<b>At the end of the course students will be able to:</b> <ul style="list-style-type: none"><li>• Solve questions on the above mentioned areas using short cuts and smart methods</li><li>• Understand the fundamentals concepts of Aptitude skills</li><li>• Perform calculations with speed and accuracy</li></ul>

### UNIT – I : QUANTITATIVE APTITUDE - NUMERICAL ABILITY

- Numerical Ability
- Introduction to higher order thinking skills
- Speed Maths
- Number systems
- LCM & HCF

### UNIT – II: QUANTITATIVE APTITUDE- ARITHMETIC ABILITY FOUNDATION

- Arithmetic Ability
- Percentage
- Profit loss and discounts
- Ratio proportions Allegations and mixtures
- Averages

### UNIT – III: QUANTITATIVE APTITUDE- ARITHMETIC ABILITY ADVANCED

- Arithmetic Ability
- Time speed and distance
- Time and work
- Interest calculations

### UNIT – IV: REASONING ABILITY – GENERAL REASONING PART 1

- General Reasoning
- Coding decoding
- Directions
- Series completions

### UNIT – V: REASONING ABILITY- GENERAL REASONING PART 2

- General Reasoning
- Analogies
- Classification
- Alphabet test
- Mathematical operations

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -I SEMESTER  
INTEGRATED CIRCUITS LAB**

Instruction: 3 Periods per week	Sessionals: 25 Marks	SEM Exam Marks:50 Marks
Credits:02	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3311

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will design and verify circuits using ICs for the given specifications.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Implementing and Testing various OPAMP based circuits.</li> <li>Design and verify the combinational and sequential circuits.</li> <li>Examine the performance of various filters and 555 timer applications.</li> </ul>

**LIST OF EXPERIMENTS: PART – A**

- Measurement of parameters of Op-Amp. Voltage Follower, Inverting and Non Inverting Amplifiers, Level Translators using Op-Amp.
- Arithmetic Circuits: Summer, Integrator Differentiator using Op-Amp.
- Active filters: LP, HP and BP using Op-Amp.
- Op-Amp Oscillators: Astable, Monostable.
- Triangle and Square wave Generators. Schmitt Trigger using Op-Amp.
- Voltage Controlled Oscillator Using LM 566.
- IC Regulators and current boosting.
- Applications of 555 Timer.

**PART – B**

- Measurement of propagation delay, fan-out, Noise margin and transfer Characteristics of TTL and CMOS IC gates and open collector / drain gates.
- Designing code converters using logic gates and standard code converters. Parity generator and checker circuit.
- Flip-Flop conversions and latches using gates and ICs.
- Designing Synchronous, Asynchronous up/down counters
- Shift registers and ring counters using IC Flip-Flops & Standards IC counters.
- Full adders, subtractors using logic gates and multiple bits IC Adder/Subtractor and arithmetic Circuits.
- Mux - Demux applications.
- Interfacing counters with 7-segment LED/LCD display units.

**General Note:** 1. At least 5 experiments shall be done by each student from each part.

- A total of not less than 10 experiments must be carried out during the semester.
- Analysis and design of circuits, wherever possible, should be carried out using SPICE tools.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -I SEMESTER  
MICROPROCESSOR AND MICROCONTROLLER LAB**

Instruction: 3 Periods per week	Sessionals: 25 Marks	SEM Exam Marks:50 Marks
Credits:02	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3321

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will experiment with 8086 assembly language programming on X86 kits and perform virtual design simulation on proteus 7.2 for 8051 microcontroller in embedded 'C' with (µ vision-4) IDE.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Apply the knowledge of programming on the basic architectures of 8086 µP &amp; 8051 µC.</li> <li>Interface 8051 µC with various I/O peripherals using proteous software in keil microvision 4 IDE.</li> <li>Design and model a mini project as per the required specifications.</li> </ul>

**PART – A [Experiments on assembly language programming for 8086 µP using Assembler]**

- Execution of basic programs on 8086 microprocessors (8 bit and 16 bit arithmetic operations).
- Programs using different addressing modes.
- Single byte, multi byte binary and BCD addition and Subtraction.
- Code conversions.
- String Searching and Sorting
- Generation of waveforms and gating applications using 8253/8254 timers.
- Generation of waveforms using DAC interface.
- Monitor utilities of 8086 kit for Keypad/displaying results.

**PART- B [Experiments on Embedded C programming for 8051 µC using Keil IDE]**  
LED toggle, Switch control logics in polling mode.

- Timer and counter programming.
- Square wave generation with variable duty cycle (PWM).
- Interrupt programming

4. Serial communication using RS 232 UART protocols.
5. Interfacing for A/D applications.
6. Program to control stepper motor and DC motor.
7. LCD display interfacing (4-bit and 8-bit mode).
8. Keypad interfacing.

**General Note:**

1. At least 7 experiments shall be done by each student from each part.
2. A total of not less than 14 experiments must be carried out during the semester.
3. Analysis and design of circuits, wherever possible should be carried out using SPICE tools.

**Special Note:**

- Sessional marks are to be awarded as per the following breakup.
- 20 marks for the regular lab exercises and internal exam.
- 5 marks for the mini project-cum-design exercise(s).

*With effect from the A.Y 2016-17*

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -I SEMESTER**  
**NETWORKING LAB**

Instruction: 3 Periods/week	Sessionals: 25 Marks	SEM Exam Marks:50 Marks
Credits:02	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3331

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>• Provides comprehensive coverage of networking topics, from fundamentals to advanced applications and services, while providing opportunities for hands-on practical experience and career skills development.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>• Build simple LANs, perform basic configurations for routers and switches, and implement IP addressing schemes.</li> <li>• Configure and troubleshoot routers and switches and resolve common issues with RIPv1, RIPng, single-area and multi-area OSPF, virtual LANs, and inter-VLAN routing.</li> </ul>

1. Packet Tracer - Network representation.
2. Configuring Initial Switch Settings.
3. Investigating the tcp/ip and osi models in action.
4. Explore a Network.
5. Identifying Network Devices and Cabling.
6. Connecting Wired and Wireless lan.
7. Configure Initial Router Settings.
8. Investigate Unicast, Broadcast and Multicast Traffic.
9. Configuring ipv4 & ipv6 Addressing.
10. Troubleshooting ipv4 and ipv6 Addressing.
11. Subnetting Scenario 1.
12. Subnetting Scenario 2.
13. Implementing a Subnetted ipv6 Addressing Scheme.
14. DNS and DHCP.
15. Configuring a Linksys Router.
16. Skills Integration Challenge- module

**SYLLABUS FOR III/IV B.E -II SEMESTER**  
**DIGITAL COMMUNICATION**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3160

<b>Course Objective:</b>	<b>Course Outcomes</b>
<ul style="list-style-type: none"> <li>Students will understand the fundamentals of digital communication system &amp; learn various source and channel coding techniques and will appreciate different examples of digital modulation applications in real time &amp; Spread Spectrum modulation.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Understand /compare digital modulation techniques and their applications.</li> <li>Assess entropy and efficiency of various channels.</li> <li>Design block codes, convolution &amp; cyclic codes.</li> <li>Analyze spread spectrum modulation techniques their acquisition and tracking circuits.</li> </ul>

**UNIT – I**

Elements of Digital Communication System, Comparison of Digital and Analog Communication Systems. Analog to Digital Conversion, Quantization and Encoding techniques, PCM. Companding in PCM systems:  $\mu$ -law and A-law. Applications of PCM: PCM-TDM. Introduction to Linear Prediction Theory. Modulation and demodulation of DPCM and DM. Quantization noise and Slope overload error in DM. Modulation and demodulation of ADM. Comparison of PCM, DPCM, DM and ADM. SNR of PCM and DM. Vocoders.

**UNIT – II**

Uncertainty, Information and entropy. Source coding, Shannon – Fano algorithm and Huffman coding. Discrete memoryless channels, Probability relations in a channel, priori & posteriori entropies, cascaded channels, mutual information, Channel capacity, information rate and information capacity. Rate distortion.

**UNIT – III:**

Types of transmission errors, need for error control coding, Linear Block Codes (LBC): description of LBC, generation, Syndrome and error detection, minimum distance of a block code, error correcting and error detecting capabilities, Standard array and syndrome decoding, Hamming codes. Binary cyclic codes (BCC): description of cyclic codes, encoding, decoding and error correction of cyclic codes using shift registers, BCH codes. Convolution codes: description, encoding and decoding.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -II SEMESTER  
DIGITAL SIGNAL PROCESSING**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3170

**UNIT – IV:**

Base band digital data transmission, error probability, matched filter, correlation receiver, coherent and non-coherent ASK, FSK, PSK, DPSK and QPSK, and error probability. Need for MSK, Modulation, Comparison of digital carrier modulation schemes. M-ary signaling schemes. Synchronization methods.

**UNIT – V**

Need for spreading a code, generation and characteristics of PN sequences. Direct Sequence Spread Spectrum and Frequency hopping spread spectrum systems and their applications. Acquisition schemes for spread spectrum receivers, Tracking of FH and DS signals.

**Suggested Reading:**

1. Simon Haykin, "Communication Systems," 4/e, Wiley India, 2011.
2. Herbert Taub, Donald L. Shilling & Goutam Saha, "Principles of Communication Systems," 3/e, TMH, 2008.
3. P. Ramakrishna Rao, "Digital Communication," 1/e, TMH, 2011.
4. A. Bruce Carlson and Paul B. Crilly, "Communication Systems," 5/e, 2011.
5. Sam Shanmugham.K., "Digital and Analog Communication Systems," Wiley, 1979.

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>• Students will apply FFT algorithms, discuss various design methods of FIR &amp; IIR filters, describe the concepts of multirate signal processing and identify important features of TMS 320C 54XX DSP processors.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>• Apply FFT for computation of DFT.</li> <li>• Design digital filters by various methods</li> <li>• Implement S/R conversions and describe DSP processors.</li> </ul>

**UNIT – I**

Fast Fourier Transform : Overview of Discrete time Fourier Transform (DTFT), Discrete Fourier transform (DFT), – Efficient computation of DFT- Properties of DFT .

FFT algorithms –Radix-2 FFT algorithms – Decimation in Time – Decimation in Frequency algorithms - in place computation- bit reversal- Use of FFT algorithms in Linear Filtering and Correlation.

**UNIT – II**

Digital filters (FIR) Design: Amplitude and phase responses of FIR filters – Linear phase filters – Windowing techniques for design of Linear phase FIR filters – Rectangular, Bartlet, Hamming, Blackman, Kaiser – realization and finite word length effects.

**UNIT – III**

Digital filters (IIR) Design: Butterworth and Chebychev approximation- IIR digital filter design techniques- Impulse Invariant transformation - Bilinear transform techniques- Digital Butterworth- Chebychev filters,-comparisons between FIR and IIR filters. Digital filters structures.

**UNIT – IV**

Multirate Digital Signal Processing : Introduction -Decimation by a Factor D- Interpolation by a Factor I- Sampling Rate Conversion by a Rational Factor I/D- Implementation of Sampling Rate Conversion- Multistage implementation of Sampling Rate Conversion- Sampling Rate Conversion by an Arbitrary factor- Application of Multirate Signal Processing.

### UNIT – V

Introduction to DSP Processors: Difference between DSP and other microprocessors architectures- their comparison and need for ASP, RISC and CPU- General purpose DSP processors- TMS 320C 54XX processors, architecture, addressing modes-instruction set.

#### Suggested Reading:

1. Alan V. Oppenheim & Ronald W. Schafer, "Digital Signal Processing," PHI, 2/e, 2010.
2. John G. Proakis & Dimitris G. Manolakis, "Digital Signal Processing Principles, Algorithms and Application," PHI, 3/e, 2000.

SYLLABUS FOR III/IV B.E -II SEMESTER  
ANTENNAS AND WAVE PROPAGATION**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3180

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will understand antenna fundamentals, working of antennas and different modes of wave propagation.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Analyze the basic antennas parameters and antenna radiation.</li> <li>Classify, analyze and design the antennas and isotropic antenna arrays.</li> <li>Identify and explain different modes of propagation different regions of atmosphere at different frequencies.</li> </ul>

### UNIT – I

Principles of radiation, retarded potential and isotropic radiator, Basic antenna parameters: patterns, radiation intensity, far field, near field, Gain and directivity, Antenna Polarization, effective aperture, aperture efficiency. Point sources, Current distribution, infinitesimal dipole.

### UNIT – II

Half-wave dipole, quarter wave monopole, Effect of earth on vertical patterns, Loop antenna, Far field pattern of circular loop with uniform current. Helical Antennas: Axial mode pattern, wideband characteristics, radiation efficiency, Q, Bandwidth, S/N ratio.

### UNIT – III

Arrays of point sources, two element array with equal and unequal amplitudes, different phases. Linear array with uniform distribution, binomial array, principle of pattern multiplication. Broadside and End fire arrays, effect of inter element phase shift on beam scanning.

### UNIT – IV

VHF,UHF turnstile antennas, Rhombic Antenna, Yagi - Uda Array, Log periodic Antenna, Horn, Parabolic Reflector, Lens antennas. Microstrip antennas: different types, advantages and disadvantages of Microstrip antennas (Working principle and characteristics only). Antenna Measurements: Antenna Test Site, impedance, radiation pattern and gain measurement techniques, Antenna temperature.

### UNIT – V

Ground wave propagation, Space and Surface waves, Tropospheric refraction and reflection, Duct propagation, Sky wave propagation, Regular and irregular variations in ionosphere. Friis transmission formula, Line of sight propagation.

2. Constantine A. Balanis, "Antenna Theory: Analysis and Design," 3/e, John Wiley, 2005.
3. Edward C. Jordan and Kenneth G. Balmain, "Electromagnetic Waves and Radiating Systems," 2/e, PHI, 2001.
4. Chatterjee, R., "Antenna Theory and Practice," New Age Publishers, 2008.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -II SEMESTER  
COMPUTER ORGANIZATION AND ARCHITECTURE**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:03	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC 3190

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will be introduced to computer organization and architecture and understand the basic concepts of CPU, I/o organization &amp; memory organization.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Define and discuss various types of Data representation, digital arithmetic algorithms and instruction codes.</li> </ul>

**UNIT – I**

Data representation and Computer arithmetic: Introduction to Computer Systems, Organization and architecture, evolution and computer generations; Fixed point representation of numbers, digital arithmetic algorithms for Addition, Subtraction, Multiplication using Booth's algorithm and Division using restoring and non-restoring algorithms. Floating point representation with IEEE standards and its arithmetic operations.

**UNIT – II**

Basic Computer organization and Design: Instruction codes, stored program organization, computer registers and common bus system, computer instructions, timing and control, instruction cycle: Fetch and Decode, Register reference instructions; Memory reference instructions. Input, output and Interrupt: configuration, instructions, Program interrupt, Interrupt cycle, Micro programmed Control organization, address sequencing, micro instruction format and microprogram sequencer.

**UNIT – III**

Central Processing Unit: General register organization, stack organization, instruction formats, addressing modes, Data transfer and manipulation, Program control. CISC and RISC: features and comparison. Pipeline and vector Processing , Parallel Processing, Pipelining, Instruction Pipeline, Basics of vector processing and Array Processors.

**UNIT – IV**

Input-output organization: I/O interface. I/O Bus and interface modules, I/O versus Memory Bus. Asynchronous data transfer: Strobe control, Handshaking, Asynchronous serial transfer. Modes of Transfer: Programmed I/O, Interrupt driven I/O, Priority interrupt; Daisy chaining, Parallel Priority interrupt. Direct memory Access, DMA controller and transfer. Input output Processor , CPU-IOP communication, I/O channel.

**UNIT – V**

Memory organization: Memory hierarchy, Primary memory, Auxiliary memory, Associative memory, Cache memory: mapping functions, Virtual memory: address mapping using pages, Memory management.

**Suggested Reading:**

SYLLABUS FOR III/IV B.E -II SEMESTER  
MANAGERIAL ECONOMICS AND ACCOUNTANCY**

Instruction: 3+1 Periods per week	Sessionals: 30 Marks	SEM Exam Marks: 70 Marks
Credits: 03	SEM Exam Duration: 3 Hrs	Subject Ref Code: HS 3120

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>To create an awareness about the significance of economics in day to day life and its impact of policies of organizations.</li> <li>Helps in engineering the products according to the societal needs</li> <li>Helps in leaning the investment decision making</li> <li>To understand the economical ways of production and pricing the products based on the market structures</li> <li>To analyse the performance of companies</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Make decisions in solving the economic problems of the organization</li> <li>Make better sale of the product with customer centered products and services</li> <li>Make economical production by identifying the optimum combination of inputs and price them appropriately for better profits</li> <li>Understand the process of making long term investment decisions involving huge outlay</li> <li>Analyse the past performance of the company and make decisions for future and will be competent to set up own enterprise.</li> </ul>

**UNIT – I**

**Meaning and Nature of Managerial Economics: Branches of economics – micro and macro**, Managerial Economics – nature, scope, importance, relation with other sciences and its usefulness to Engineers, Fundamental Concepts of Managerial Economics - Scarcity, Marginalism, Equi-marginalism, opportunity costs, Discounting, Time Perspective, Risk and Uncertainty, Profits, Case study method.

**UNIT - II**

**Consumer Behaviour:** Demand – concept, Determinants, Law of demand, relationship between total revenue, marginal revenue and demand, Elasticity of Demand (Price, Income Cross-Elasticity and advertising elasticity); Demand forecasting, Law of Supply, concept of Equilibrium. (Theory questions and small numerical problems on measurement of arc and point elasticity can be asked).

**UNIT - III**

**Theory of Production and Markets:** Production Function, Law of Variable Proportion, Isoquants, Economies of Scale, Cost analysis - cost concepts, Cost-Output relationship, Optimization of employment of inputs, Break-Even Analysis, market structures – types, Price-Output determination under Perfect Competition and Monopoly (theory and problems can be asked on breakeven point).

**UNIT - IV**

**Capital Management:** Significance, Introduction to capital budgeting, traditional methods and discounted cash flow methods, determination and estimation of working capital requirements, sources of capital, (Theory questions and numerical problems on estimating working capital requirements and evaluation of capital budgeting opportunities can be asked).

**UNIT - V**

**Book-Keeping:** Principles of Double entry system of Book keeping, Journal, Three column cash book and petty cash book, Bank reconciliation statement, Trial Balance, Preparation of Final Accounts with simple adjustments, Analysis and interpretation of Financial Statements through Ratios (liquidity, solvency and profitability ratios). (theory questions and numerical problems on preparation of final accounts, cash book, petty cash book, bank reconciliation statement, calculation of some ratios and analysis).

**Suggested Reading:**

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -II SEMESTER  
HUMAN VALUES AND PROFESSIONAL ETHICS – II**

Instruction: 2 Periods per week	Sessionals: 30 Marks	SEM Exam Marks:70 Marks
Credits:01	SEM Exam Duration: 3 Hrs	Subject Ref Code: HS 3140

Course Objective:	Course Outcomes
<p><b>The course will enable the students to</b></p> <ul style="list-style-type: none"> <li>• Get a holistic perspective of value-based education.</li> <li>• Grasp the meaning of basic human aspirations vis-a-vis the professional aspirations.</li> <li>• Understand professionalism in harmony with self and society.</li> <li>• Develop ethical human conduct and professional competence.</li> <li>• Enrich their interactions with the world around, both professional and personal.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>• Gain a world view of the self, the society and the profession.</li> <li>• Make informed decisions.</li> <li>• Start exploring themselves in relation to others and their work –constantly evolving into better human beings and professionals</li> <li>• Inculcate Human values into their profession.</li> <li>• Validate their aspirations through right understanding of human relationship and see the co-relation between the human values and prevailing problems.</li> <li>• Strike a balance between physical, mental, emotional and spiritual parts their being.</li> <li>• Obtain a holistic vision about value-based education and professional ethics.</li> </ul>

**UNIT-I**

**A. DISTINCTION BETWEEN NEED AND GREED**

Exercising the wisdom to distinguish need from greed.

**B. IDEAL SELF-REAL SELF**

How to define the ideal-idealism at various levels- is it possible to reach idealism –Man as a pilgrim on a journey to idealism.

**UNIT-II**

**A. RIGHTS AND RESPONSIBILITIES**

Educating an individual about rights and responsibilities –Safeguards-Stimulants- Social Justice-The three catalysts for deciding rights and responsibilities.

**B. IMBIBING AND INCULCATING CIVIC SENSE AND CIVIC-VIRTUES**

The true meaning of Integrity -Honesty, Humility, Openness, Transparency, Dedication, Reliability, Confidentiality, accountability, Collegiality, Sympathy, Trustworthiness, Co-operation, Courage.

- The moral dilemma of the Modern world, Respect for Self, Others and Work.
- Respect for women at all times especially at the workplace.

**UNIT-III: MANAGING FAILURE**

Identifying causes for failure and learning lessons-Using failure to score success-Role of self- confidence and personal ethics in coping with failure.

Anger/ Depression	Cruelty
Fear	Jealousy
Agitation	Desire
Failure	Cheating
Lethargy	Pride
Dishonesty	Greed
	Lying

**UNIT-IV : STRESS MANAGEMENT**

Identifying sources and levels of stress –Tackling stress and its associated Negativity-Positive aspect of coping with stress- Some techniques to manage stress.

**UNIT-V: DEVELOPING EMOTIONAL INTELLIGENCE**

- Self-Awareness
- Handling Emotions
- Motivation
- Empathy
- Social skills

**Learning Resources**

Credits:01	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC3220

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>To familiarize the students with advanced Java programming concepts, simple graphical user interfaces, examine case studies and have practice in developing small-scale programs ,which is done using Object Oriented Programming techniques to develop Java applications in a Windows based environment</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Write good java programs in GUI using SWING and handling different kinds of event on it including applying the concepts of multithreading.</li> <li>Update and retrieve the data from the databases using SQL</li> <li>Implements a data tier based on JDBC.</li> <li>Analyze business tier and business logic based on EJB</li> <li>Ability to implements a web tier using Java Servlets and JSP supporting Java Beans and RMI.</li> </ul>

**UNIT – I**

Working with Databases: Introduction to SQL and Relational Databases, Using java with databases: Java and CGI calls, JDBC API, Server side database Access. IO streams, IO exceptions.

**UNIT – II**

**Files** - streams - byte streams, character streams, text input/output, binary input/output, random access file operations, File management using File class.

**Connecting to Database** - JDBC Type 1 to 4 drives, connecting to a database, querying a database and processing the results, updating data with JDBC.

**UNIT – III**

Package Java. net: Datagram Packet, Datagram socket, Inet Address, Server Socket, Socket, URL, and URL Connection.

**UNIT – IV**

Introduction to CGI, PERL, SERVELETS, RMI, SWINGS, CORBA, EJB, activeX.

**Suggested Reading**

1. Thomas. A. Powell, *HTML- The Complete Reference*, TMH, 2002.
2. Herbert Schildt, *JAVA – The Complete Reference*, TMH, 2014 9<sup>th</sup> edition
3. Robert Orfali and Donharkey, *Client Server Programming with JAVA and CORBA*, John Wiley, 2<sup>nd</sup> ed., 1998.
4. Comer, *Internet Book – everything you need to know about computer networking & How Internet Works*, 3<sup>rd</sup> PHI, 2002

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -II SEMESTER**  
**FINISHING SCHOOL – IV : SOFT SKILLS**

Instruction: 2 Periods per week	Sessionals: 15Marks	SEM Exam Marks:35 Marks
Credits:01	SEM Exam Duration: 3 Hrs	Subject Ref Code: HS3210

Course Objective:	Course Outcomes
<p>This course aims at enhancing the employability skills. Students will be trained in higher order thinking skills including analytical skills, problem solving skills and critical &amp; logical reasoning skills. Students will be trained to work systematically and develop logical and analytical thinking.</p> <p>Students will be trained in the following areas</p> <ol style="list-style-type: none"> <li>1. Critical and Nonverbal reasoning</li> <li>2. Pure Maths</li> <li>3. Verbal ability</li> <li>4. Logical reasoning</li> <li>5. Data Interpretation and Analysis</li> </ol>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Understand the fundamentals concepts of Aptitude and verbal skills</li> <li>Solve questions using short cuts and smart methods</li> <li>Perform calculations with speed and accuracy</li> <li>Develop Analytical thinking and problem solving skills</li> </ul>

**UNIT 1****VERBAL ABILITY**

- Finding errors
- Vocabulary
- Synonyms
- Antonyms
- Idioms and Phrases
- Fill in the blanks and sentence Jumbles
- Reading comprehension

**UNIT 2 LOGICAL REASONING**

- Logical Reasoning
- Assignments
- Puzzles
- Blood relations
- Syllogisms

**UNIT 3 CRITICAL AND NON VERBAL REASONING**

- Critical Reasoning
- Nonverbal reasoning
- Figure series and completions

**UNIT 4 QUANTITATIVE APTITUDE - PURE MATHS**

- Pure maths
- Algebra
- Probability
- Permutations and combinations

**UNIT 5 DATA INTERPRETATION AND ANALYSIS**

- Data Interpretation
- Line graph
- Pie chart
- Bar Graph
- Tabulations

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -II SEMESTER  
ANALOG AND DIGITAL COMMUNICATION LAB**

Instruction: 3 Periods per week	Sessionals: 25Marks	SEM Exam Marks:50 Marks
Credits:02	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC3411

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>The objective of this course is to provide necessary skills to design, analyze and implement digital communication systems.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Analyze modulation &amp; demodulation of PCM, DPCM, DM, ADM.</li> <li>Plot the modulated &amp; demodulated waveforms of ASK, PSK, FSK, MSK.</li> <li>Study the working of modem.</li> <li>Measure attenuation, NA, losses of optical fibre cable.</li> </ul>

**(A) Experiments on Analog Communication**

- AM, FM generation and detection
- Balanced Modulator
- Pre emphasis and De-emphasis circuits
- Radio Receiver Measurements: Sensitivity, Selectivity and Fidelity
- Sampling and reconstruction
- PAM, PWM, and PPM generation and detection
- Time Division, Frequency Division Multiplexing and De-multiplexing
- PLL Characteristics
- Spectral Analysis of Video signals generated by TV demonstrator Kit and Pattern Generator using Spectrum analyzer
- Mixer Characteristics

**(B) Experiments on Digital Communication**

- PCM generation and detection
- Error control coding
- Data formats / channel encoding and decoding.
- Linear Delta, Adaptive Delta Modulation and Demodulation.
- ASK, FSK, BPSK & QPSK generation and Detection.
- Minimum Shift Keying generation & detection
- Optical Fibre measurements: Numerical aperture, Attenuation, E-O and O-E characteristics
- Digital Fibre Optic Multiplexed Link
- Modem characteristics.
- Wavelength Division Multiplexing

**Note:**

- Minimum of **5** from Part A and **5** from Part B is mandatory.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING  
SYLLABUS FOR III/IV B.E -II SEMESTER  
DIGITAL SIGNAL PROCESSING LAB**

Instruction: 3 Periods per week	Sessionals: 25Marks	SEM Exam Marks:50 Marks
Credits:02	SEM Exam Duration: 3 Hrs	Subject Ref Code: EC3421

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>Students will develop MATLAB programs for operation of sequences, to design and obtain the frequency response of various digital filters and to implement techniques of multirate processing.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Develop MATLAB files for the verification of system response and design various digital filters.</li> <li>Verify the functionality of FFT algorithms, interpolation &amp; Decimation.</li> <li>Implementation of code using CCS on DSK for verification of system response and for designing digital filters.</li> </ul>

**(A) Experiments on DSK and CCS**

- Solutions of difference equations
- Impulse Response
- Linear Convolution.
- Circular Convolution
- Study of procedure to work in real- time.
- Fast Fourier Transform Algorithms: (DIT, DIF)
- Design of FIR (LP/HP) using windows, (a)Rectangular, (b)Triangular (c) Hamming window
- Design of IIR (HP/LP) filters.

**(B) Experiments on signal processing.**

- DFT and FFT algorithm
- Linear Convolutions
- Circular Convolutions
- FIR filter design using different data windows
- IIR filter design: Butter worth, chebysheve type 1 and 2 and Bilinear transformation Methods.
- Interpolation and Decimation.

**Note:**

- Minimum of **5** from Part A and **5** from Part B is mandatory.
- For section 'B', MATLAB with different toolboxes like Signal Processing, Signal Processing block set, and SIMULINK/ MATHEMATICA/ any popular software can be used.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING**  
**SYLLABUS FOR III/IV B.E -II SEMESTER**  
**MINI PROJECT**

Instruction: 3 Periods per week	Sessionals: 25Marks
Credits:02	Subject Ref Code: EC3431

Course Objective:	Course Outcomes
<ul style="list-style-type: none"> <li>To make the students realize the application value of what they have studied till then.</li> <li>The students would be made to know the importance of sequential thinking that is needed to achieve a specified goal.</li> <li>This is a prelude to take up a major project in their final year.</li> </ul>	<p><b>At the end of the course students will be able to:</b></p> <ul style="list-style-type: none"> <li>Take up projects of good quality and application value</li> <li>Acquire skills to apply their knowledge in a multi-dimensional environment to solve problems of interdisciplinary nature.</li> <li>Take up projects of social relevance and investigate academic issues and challenges in their implementation.</li> </ul>

The Students are required to carry out Mini Project one or more of the areas such as

- Linear and Digital Integrated Circuits,
- Analog and Digital Communication
- Microprocessor and Microcontrollers
- Control and Instrumentation
- Digital Signal Processing
- Antennas

Students are required to submit a report on the Mini Project at the end of the Semester.
