MATHEMATICS - III

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : MA 2010
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> Understand the basics of Fourier series, partial differential equations, applications of partial differential equations in one dimensional wave, heat and Laplace equations Study the basic numerical methods to find the solution of algebraic, transcendental equations and also the numerical techniques for finding derivatives, solutions of ordinary differential equations and their applications Study the fundamentals of probability, statistics, distributions, testing of hypothesis, curve fitting, correlation, regression, lines of regression and their applications 	<ol style="list-style-type: none"> Understand the basics of Fourier series, partial differential equations. Applications of partial differential equations in one dimensional wave, heat and Laplace equations Understand study the basic numerical methods to find the solution of algebraic, transcendental equations and also the numerical techniques for finding derivatives, solutions of ordinary differential equations and their applications Understand the fundamentals of probability, statistics, distributions, testing of hypothesis, curve fitting, correlation, regression, lines of regression and their applications

- UNIT-I :** **Fourier Series:** Introduction to Fourier series - Conditions for a Fourier expansion - Functions having points of discontinuity - Change of Interval - Fourier series expansions of even and odd functions - Fourier Expansion of Half-range Sine and Cosine series.
- UNIT-II :** **Partial Differential Equations and its Applications:** Formation of first and second order Partial Differential Equations - Solution of First Order Equations - Linear Equation - Lagrange's Equation, Non-linear first order equations - Charpit's method
Applications of Partial Differential Equations: Method of Separation of Variables - Solution of One Dimensional Heat Equation - One Dimensional Wave Equation - Laplace's Equation.
- UNIT-III :** **Numerical Methods:** Solution of Algebraic and Transcendental equations-Bisection method - Regula Falsi method- Newton-Raphson Method - Solution of Linear System of Equations - Gauss- Seidel Iteration Method - Interpolation- Newton's Forward and Backward Interpolation Formulae - Lagrange's Interpolation Formula - Newton's Divided Difference Formula - Numerical Differentiation -Interpolation approach- Numerical Solutions of Ordinary Differential Equations - Taylor's Series Method - Euler's Method - Runge-Kutta Method of 4th order(without proofs).
- UNIT-IV :** **Probability and Statistics:** Random variables - Discrete Probability Distribution - Continuous Probability Distribution - Expectation - Variance - Moments -Moment Generating Function- Poisson and Normal Distributions - Testing of Hypothesis - Tests of

UNIT-V : Significance - t-test - F- test - χ^2 - test for small samples.
Curve Fitting: Curve Fitting by the Method of Least Squares, Fitting of Straight line - Parabola - Exponential Curves- Correlation - Karl Pearson's Co-efficient of Correlation - Spearman's Rank Correlation, Regression - Lines of Regression.

BUILDING PLANNING & DRAWING

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 2+3 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE2010
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Learn the principles of planning and orientation of buildings along with building services 2. Acquire knowledge on various aspects of green buildings 3. Study the preparation and presentation of civil engineering drawings with relevant conventional signs 	<ol style="list-style-type: none"> 1. Develop building plans relevant to building bylaws 2. Explain various services utilized in buildings 3. Understanding the basics of green building 4. Draw components of buildings and roof trusses 5. Demonstrate the ability to prepare civil engineering drawings

- UNIT-I :** **Building Planning:** Principles of planning. Relevant building bylaws (NBC & Municipal), site selection for buildings, common errors in planning, orientation of buildings. Provision of rainwater harvesting, provision for physically handicapped facilities.
- UNIT-II :** **Building services:** Lifts, Escalators and ramps. Fire protection - its importance, development of fire, reduced spread of fire, fire resistance in structural elements, means of escape, Standing Fire Advisory Council norms. Water supply - Water distribution and plumbing fixtures.
Green Building: Concept of Green building. Principles of green building - usage of low energy materials - effective cooling and heating systems - effective electrical systems - effective water conservation systems - Certification systems.
- UNIT-III :** **Conventional Signs:** Conventional representation of building materials in section-Representation of building elements- doors, windows, ventilators, cupboards and grills in plan, Representation of electrical and plumbing services. Bricks and brick sections in isometric view.
Brick Bonds: Plan and isometric view of wall junctions for half brick wall; one and one and a half brick wall; brick masonry courses in English bond and Flemish bond.
Stone Masonry: Elevation, sectional plans and cross sections of walls of ashlar, CRS-I and II Sorts and RR stone masonry.
- UNIT-IV :** **Doors and Windows:** Plan, section and elevation of a fully panelled door and fully panelled window, panelled venetian and glazed doors.
Stair Cases: Types of stair cases, RC stair cases - dog legged, open well and bifurcated. Steel spiral stair case.
- UNIT-V :** **Building Drawing:** Plans, elevations and sections of a single storey 1-, 2- and 3- bed room residential buildings and duplex houses.

**Learning
Resources :**

BUILDING MATERIALS & CONSTRUCTION

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2020
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Acquire knowledge on building materials such as stones, bricks, cement, aggregates, mortar and concrete. 2. Study various aspects of paints, varnishes and timber. 3. Learn the construction principles of floors, arches form work. 	<ol style="list-style-type: none"> 1. Explain the characteristics of stones and bricks. 2. Describe the properties and tests on cement, aggregate, concrete, mortar. 3. Understand the significance of emerging building materials. 4. Identify the suitability of timber, paints and varnishes for building works. 5. Review the construction principles of floors, arches and the preparation of plastering and form work.

UNIT-I : **Stones:** Classifications of stones, uses of stones as building materials, characteristics of good building stones. Quarrying, various methods. Dressing and polishing of stones.

Bricks: Composition of brick clay. Methods of manufacturing bricks. Preparation of brick earth, Tempering, Pugmill. Various steps of moulding, drying and methods of burning of bricks; clamps. Characteristics of good building bricks, classification of bricks. Introduction to light weight bricks.

UNIT-II : **Cement:** Chemical composition of cement, manufacturing process. Tests on cement. IS:269 specifications for Ordinary Portland Cement, various types of cements.

Blended Cements: Various types and their uses.

Fine Aggregate: Characteristics of good sand and its classifications, bulking of sand. Alternatives to natural sand.

Coarse Aggregate: Characteristics of good coarse aggregates for manufacture of concrete. Tests on aggregates.

UNIT-III : **Mortar:** Different types of mortars, preparation, setting and curing. Manufacturing methods of mortar.

Concrete: Designation, workability of concrete.

Reinforcing steel: Types of reinforcement, specifications.

Emerging Building Materials: Recycled materials, local materials and industrial waste products as a means of sustainable development, eco-friendly, smart materials and materials for repair.

UNIT-IV : **Timber:** Timber as a building material and its uses. Various types of timber. Seasoning and its importance. Preservation of wood. Plywood & Laminates and their uses.

Paints, Varnish and Distemper: Constituents, characteristics of good paints. Binders, vehicles, thinners and pigments. Painting of different types of surfaces; types of varnish, and application. Types of distemper, and application.

UNIT-V : **Floors:** Characteristics of good floors. Common types of floors. Stone flooring, concrete flooring, terrazo flooring. Ceramic and mosaic tiles. Industrial floors. Methods of construction, and maintenance.

Arches: Geometrical forms. Semicircular, segmental, HorseShoe, Stilted, Blunt, Equilateral, Acute, Three centered, Two Cupped flat arch, Types of brick and stone arches.

Plastering, Pointing and White / Colour Washing: Types of plastering, preparation of surfaces, and defects. Types of pointing, preparation of surfaces. Preparation and application of white wash, and colour wash.

Form work and scaffolding: Requirements, types, materials, accessories, reuses and maintenance.

Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Describe the various properties of minerals, distinguishing features of rocks. 2. Describe the geological structures, processes of weathering and classification of soils. 3. Explain the process of ground water exploration. 4. Illustrate the knowledge of geological studies for dams and reservoirs. 5. Illustrate the knowledge of geological studies for tunnels, list the causes and effects of earth quakes, tsunamis and landslides with their mitigation measures. 	<ol style="list-style-type: none"> 1. Identify the different minerals and distinguishing features exhibited by the rocks 2. Identify the geological structures like folds, faults, joints and unconformities present in rocks and describe the processes of weathering, classify and distribution of soils. 3. Assess the occurrence of ground water in various lithological formations and location of bore wells. 4. Evaluate the suitability of site for the dam construction. 5. Evaluate the suitability of site for the tunnel construction, recognize the causes and effects of earth quakes, tsunamis and land slides and suggest mitigation measures.

UNIT-I : Mineralogy: Definition of mineral and crystal, physical properties used in the identification of minerals, physical properties of quartz, feldspars, hornblende, biotite, muscovite, talc, olivine, calcite, kyanite and garnet.

Rocks: Textures and structures of igneous, sedimentary and metamorphic rocks. Geological description and Indian occurrence of granite, basalt, dolerite, gabbro, laterite, sandstone, shale, limestone, slate, gneiss, quartzite, marble, khondolite and charnockite.

UNIT-II : Geological Structures: Classification, mode of origin and engineering importance of folds, faults, joints and unconformities, fault map of India.

Rock Weathering: Processes and end-products of weathering. Susceptibility of rocks to weathering; assessment of the degree of weathering. Tests of weatherability, and engineering classifications of rock weathering.

Geology of Soils: Formation of soils, soil profile, nature of parent materials, relative stability of minerals, important clay minerals, geological classification of soils, types of Indian soils.

UNIT-III : Hydrogeology: Hydrological cycle, water table, aquifers, occurrence of ground water in various lithological formations. Ground water movement, springs. Ground water exploration. Ground water provinces of India.

UNIT-IV : Geology of Dams and Reservoirs: Types of dams. Dam foundations and reservoirs. Engineering and geological investigations for a masonry dam site; analysis of dam failures in the past. Engineering geology of major dam sites of India, Reservoir induced seismicity.

UNIT-V : **Tunnels:** Engineering geological investigations of tunnels in rock; Stand-up time of different rocks. Problems of tunneling, pay line and over break, logging of tunnels, and geology of some well known tunnels. Tunnel alignment.

Geological Hazards: Geological aspects of earthquakes, tsunamis and land slides.

STRENGTH OF MATERIALS - I

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 4+2 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2040
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Examine and interpret basic concepts of Strength of materials and analyze statically determinate and indeterminate structures. 2. Analyze simple beams subjected to various types of loading and plot shear force and bending moment diagrams and compute bending stresses. 3. Define and analyze shear stresses in beams and plot shear stress distribution across cross section of beams 4. Define and analyze problem of columns subjected to direct and bending stresses 5. Define the concepts of compound stresses and strains in beams 6. Investigate the behavior of thin cylinder, spherical shells and thick cylinders 	<ol style="list-style-type: none"> 1. Express his understanding of the basic concepts and principles of Strength of materials and solve problems of composite sections and solve problems of statically determinate and indeterminate structures. 2. Construct shear force and bending moment diagrams for beams and compute stresses and strains in bending and shear in the cross section of beams subjected to transverse loading. 3. Compute direct and bending stresses in columns and beams subjected to eccentric loading. 4. Identify and interpret the governing equation for compound stress and strains and compute the principal stress and strains 5. Compute stresses in thin cylinders, spherical shells and thick cylinders subjected to internal and external pressure.

UNIT-I : **Simple Stresses and Strains:** Definitions, types of stresses and strains. SI units, and notation. Hooke's law, modulus of elasticity, stress-strain curves for mild steel and typical engineering materials. Ductile and brittle materials. Working stress and factor of safety. Deformation of bars under axial loads; prismatic and non-prismatic bars. Deformations due to self-weight. Bars of uniform strength. Poisson's ratio; volumetric strain and restrained strains. Relationship between elastic constants. Compound bars and temperature stresses. Statically indeterminate problems in tension and compression. Compound bars and temperature stresses.

UNIT-II : **Shear Force and Bending Moment:** Definitions. Different types of beams and loads; shears force and bending moment diagrams for cantilever and simply supported beams with and without overhangs subjected to different types of loads viz., point loads, uniformly distributed loads, uniformly varying loads and couples. Relationship between loading, shear force and bending moment.

UNIT-III : **Bending Stresses in Beams:** Theory of simple bending. Moment of resistance, modulus of section. Stresses in beams of various cross sections; flitched beams.
Shear Stresses in Beams: Distribution of transverse shear stresses over rectangular, circular, triangular, I- and T- sections.

UNIT-IV : **Direct and Bending Stresses:** Distribution of stresses over symmetrical sections under combined axial load and bending moment. Cores of solid and hollow circular and rectangular sections.

Compound stresses and strains: Principal stresses. Ellipse of stress. Mohr's circle for biaxial stresses. Principal strains. Introduction to failure theories.

UNIT-V : **Thin Cylinders and spherical shells:** Thin Cylinders subjected to internal fluid pressure; wire wound cylinders & shells

Thick Cylinders: Stresses under internal and external pressure. Compound cylinders.

SURVEYING-I

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2050
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
1. Learn the basic concepts and use of surveying in Civil Engineering 2. Understand the measurement techniques and equipment used in land surveying such as chain/tape, compass, plane table and level with respect to equipments used, methods, errors and analysis of data 3. Acquire knowledge on use of theodolite equipment, its adjustments, measurements, methods employed, errors and computation of data.	1. Employ basic surveying operations and computations using chain/tape; theories of errors and their analysis; computation of areas 2. Explain the instruments, systems of angle measurements, survey and plotting methods and errors in compass surveying; 3. Identify the instruments used, principles adopted and methods involved in plane table surveying. 4. Illustrate the levelling operations and apply the principles of levelling and contouring, prepare contour maps and estimate volume of earthwork 5. Interpret the principles of measurement of angles with theodolites, make traverse computations and identify omitted measurements in traverse and give solutions to such problems

UNIT-I : Introduction to Surveying: Plane and Geodetic surveying, Principle of surveying, Classification of surveys.

Chain Surveying: Principles of chain survey, use and adjustment of various instruments employed in chain survey. Concept of Direct and Reciprocal Ranging, Use of optical square, Offsets and errors in offsets. Obstacles in chaining, Errors and sources of errors, Tape corrections, Conventional signs.

Determination of areas by Average ordinate, mid-ordinate, Trapezoidal and Simpsons rule

UNIT-II : Compass Surveying: Use and adjustment of prismatic and surveyor's compass. Methods of surveying with a compass, Bearing systems and conversions, Magnetic declination, Dip, local attraction. Errors in prismatic survey. Plotting of compass survey. Distribution of closing error graphically by Bowditch Method.

UNIT-III : Plane Table Surveying: Instruments employed in plane table survey and their use, importance of orientation and different methods of orientation. Various methods of plane table survey. Three-point and two-point problems. Errors in plane table survey.

UNIT-IV : Levelling: Definitions and principles of levelling, components of various levelling instruments, Use and adjustment of dumpy and tilting levels. Terms used in levelling, booking and reduction of levels. Establishment of bench marks by levelling. Longitudinal levelling. Cross-section levelling, Fly levelling, and Reciprocal levelling.

Errors in levelling; curvature and refraction corrections. Sensitivity of bubble tube, Permanent adjustments of level

Contouring: Definition and characteristics of contours. Direct and indirect methods of contouring. Uses of contours. Estimation of volumes of earthwork using Simpsons and Trapezoidal rules

UNIT-V: Theodolite: Transit vernier theodolite; setting, use and temporary adjustments. Measurements of horizontal angles and bearings by repetition and reiteration methods. Permanent adjustments of transit theodolite.

Theodolite Traversing and Computations: Traversing by included angles, and bearings, conditions of closed traverse, Gale's traverse table, closing error and its adjustment, accuracy of traverse. Advantages of plotting traverse by co-ordinates, omitted measurements in traverse and their computations. Errors in theodolite survey.

Duration of Semester End Exam : 3 Hours

Course Objectives	Course Outcomes
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Identify the various features and functions of human language and communication. 2. Develop the habit of listening effectively so as to analyze the speaker's tone and tenor. 3. Choose the appropriate words so as to speak and write accurately. 4. Read various types of texts and sift information correctly. 5. Write notes and letters for personal and official purposes. 	<ol style="list-style-type: none"> 1. Listen and analyze context, tone and tenor before responding to others. 2. Begin, sustain and end conversation. 3. Respond to people in different situations. 4. Read with adequate speed and comprehend various texts. 5. Use words appropriately in different contexts for speaking and writing. 6. Use markers in written discourse. 7. Construct grammatically correct sentences to write effectively.

Part-A Soft skills (35 Marks)

UNIT-I : ORAL COMMUNICATION: LANGUAGE FUNCTION IN CONTEXT

- Greeting People and responding to greetings
- Making and responding to introductions
- Making and responding to requests
- Making , accepting and refusing invitations
- Taking permissions
- Thanking people and responding to thanks

UNIT-II : AURAL COMMUNICATION: LISTENING TO VARIOUS SPEAKERS AND TEXTS

- Listening for meaningful chunks of information
- Listening for gist and specific information

UNIT-III : READING: COMMUNICATING WITH A GIVEN TEXT

- For gist
- For details
- To target questions
- For main idea
- For supporting details to the main idea

UNIT-IV : WRITING: PERSONAL AND OFFICIAL COMMUNICATION

- Basic structures of texts
- Punctuation
- Letters
- Types of sentences

UNIT-V : GRAMMAR

- Relative clauses
- Subject verb
- Prepositions
- Common errors

VOCABULARY

- Collocations
- Phrasal verbs
- Idioms
- Adjectives for descriptions

Part-B Technical skills (35 Marks)

- Introduction to software development life cycle,
- Basic C concepts, Data types,
- Storage classes, conditional statements,
- Looping statements,
- Functions, pass by value / reference,
- Recursion,
- Arrays, pointers, structures, union, memory allocation.

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none">1. Familiarize with the procedures for the identification of minerals, rocks and structural models.2. Calculate the specific gravity, porosity and water absorption in rocks.3. Measure the attitude of beds and draw the sections for geological maps.4. Operate electrical resistivity meter.5. Describe the various types of maps.	<ol style="list-style-type: none">1. Identify the minerals, rocks and various structural features like folds, faults and unconformities.2. Calculate the specific gravity, porosity and water absorption in different rocks.3. Measure the electrical resistivity of rocks, soil etc and determines the depth of water table.4. Locate the occurrence of different rocks, soils and study of topographic maps.5. Draw the sections pertaining to the study of folds, faults and unconformities.

LIST OF EXPERIMENTS

1. Identification and description of physical properties of minerals.
2. Identification and description of geotechnical characteristics of rocks; IS: 1123 - 1975.
3. Determination of apparent specific gravity, porosity and water absorption of different rocks; IS : 1124 - 1974.
4. Study of structural models; folds, faults and unconformities.
5. Measurement of strike and dip of joints in granites using clinometer compass.
6. Measurement of electrical resistivity of rocks, soils and water.
7. Vertical electrical sounding.
8. Study of geological and geotechnical maps of Telangana, Andhra Pradesh and India.
9. Study of Topographic maps.
10. Study of maps and sections pertaining to the study of folds, faults and unconformities.

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
1. Learn the principal of working from whole to part and errors in surveying.	1. Locate the objects, measure the distances and area and transfer the same onto the drawings
2. Develop skills for applying classroom knowledge to field problems and handling of measuring tools.	2. Demonstrate controlling the accumulation of errors.
3. Learn the ability to work in a team and make effective presentations.	3. Compute the distances, angles, reduced levels and setting out works using chain and tape, prismatic compass, auto levels, plane table and theodolite.
	4. Practice working as a team member and make effective presentations

LIST OF EXPERIMENTS

1. Practice of direct and indirect ranging and measuring the distance using Chains and Tapes.
2. Application of traversing to locate a building and field objects - Plotting.
3. Traversing by using compass - plotting and adjustments.
4. Plane table survey- radiation and intersection methods.
5. Solution to resection by Two-point problem.
6. Solution to resection by Three-point problem using trial and error method and tracing paper methods.
7. Reduction of levels by HI & Rise and fall method.
8. Cross section levelling and plotting using Autolevel.
9. Contour surveying and plotting using grid method.
10. Measurement of horizontal angles using repetition and reiteration methods.
11. Traversing using theodolite - distribution of errors using Gales traverse table.
12. Demonstration of minor surveying instruments.

DEPARTMENT OF CIVIL ENGINEERING

CIVIL ENGINEERING DRAFTING LABORATORY

SYLLABUS FOR BE 2/4 - FIRST SEMESTER

Instruction : 3 Periods per week
Credits : 2

Semester End Exam Marks : 50
Sessional Marks : 25

Subject Reference Code : CE 2031
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Use the functions and commands of AutoCAD software to create, save, and print drawings that make use of multiple lines, geometric shapes, and curves. 2. Locate and apply the many features of AutoCAD that automate the drafting process and facilitate the creation of more accurate drawings in less time than traditional drafting methods. 3. Locate and apply the features of AutoCAD that provide for the accurate addition of dimensions, tolerances, and drawing notes and labels using symbols and placements recognized by multiple standards organizations. 4. Use the functions and commands of AutoCAD software to create isometric and three-dimensional drawings and models. 	<ol style="list-style-type: none"> 1. Navigate the AutoCAD user interfaces 2. Use the fundamental features of AutoCAD 3. Use the precision drafting tools in AutoCAD to develop accurate technical drawings 4. Present drawings in a detailed and visually impressive way 5. To streamline the design process and become more productive with AutoCAD

LIST OF EXPERIMENTS

1. **CAD:** Introduction to Computer Aided Drafting, Advantages and Disadvantages of CAD, List of CACED Softwares.
AUTOCAD: Introduction and Features of AUTOCAD Software.
2. **Environment of AutoCAD:** Workspace, Application Menu, Quick Access Toolbar, Ribbon, Search for information, Pull-down menu, Status bar, Function keys.
Coordinate systems: Used in AutoCAD - absolute and relative, Cartesian and polar coordinate systems.
3. **Basic Managing/ Display control Tools:** New, Save, Qnew, Open, Close, Quit/ Exit, Undo, Redo, Limits, Units, Zoom, Pan, Steering Wheel, View Cube etc.
Basic Drafting Tools: Line, Polylines, Point, Circle, Arc, Spline, Ellipse, Rectangle, Polygons, Text, Hatch.
4. **Editing/ Inquiry Tools:** Erase, oops, Move, Copy, Mirror, Rotate, Scale, Fillet, Chamfer, Trim, Extend, Break, Join, Stretch, Offset, Array, Distance, Radius, Angle, Area, Volume.
5. **Dimensioning Tools:** Linear, Aligned, Radius, Diameter, Centre, Angular, Baseline, Continuous, Ordinate, Arc Length, Jogged Radius Dimension, Dimension Space, Dimension Break, Inspection Dimension, Multileader and its Style.

6. **Layer Tools:** Concepts and use of Layers in AutoCAD drawing, Adding New layers, Editing and Managing Layers. List Properties, Use of Different Types of lines and their weightages.
Block/Wblock and Attributes: Concept and Significance of Blocks in AutoCAD Drawings, Creating Blocks, Editing and Managing Blocks
7. **Doors and Windows:** Plans, Sections and Elevations for different types of Doors and Windows.
8. **Stairs:** Details of Various Types of Staircases. **Footings:** Sectional Elevations of Stone masonry and RC footings of foundations for Residential Buildings.
9. Drawing of Plans, Elevations and Sections of a Various Types of single Storey, Buildings - Residential, Commercial.
10. Introduction to AUTOCAD 3D.

FLUID DYNAMICS
(For Mechanical Engineering)

SYLLABUS FOR BE 2/4 - FIRST SEMESTER (SERVICE COURSES)

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2060
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Identify and obtain values of fluid properties and relationship between them. 2. Underline the principles of continuity, momentum, and energy as applied to fluid motions. 3. Compute laminar and turbulent boundary layer, lift and drag, flow separation fundamentals. 4. Understand the compressible flow equations. 5. Review fundamental principles of fluid dynamics for the solution of practical mechanical engineering problems 	<ol style="list-style-type: none"> 1. Identify the flow regime in a given engineering system based on consideration of the governing non-dimensional groups 2. Apply the principles of conservation of mass, momentum, and energy to the control volume to use it in Compressible and incompressible flow. 3. Solve flow through pipes using simple solutions of the Hagen-Poiseuille equation, Moody chart and the head-loss equation. 4. Discuss lift and drag and about the possibility of flow separation. 5. Apply the concepts of fluid dynamics to mechanical engineering.

UNIT-I : **Properties of fluids:** Definition of fluid and concept of continuum. Fluid properties; pressure, specific gravity, density, specific weight, specific volume, dynamic and kinematic viscosity. Classification of fluids; ideal and real fluids, vapour pressure.

Fluid Kinematics: General concepts of path lines, stream lines, streak lines and stream tubes. Classification of fluid flow; steady and unsteady, uniform and non-uniform, laminar and turbulent, rotational and irrotational, one-, two- and three- dimensional flows. Definition and properties of stream function and velocity potential function, and use of flow nets.

UNIT-II : **Fluid Dynamics:** Continuity equation in 3-D Cartesian coordinates, energy of a fluid body, potential energy and potential head, pressure energy and pressure head, kinetic energy and kinetic head, energy equation. Derivation of Euler's and Bernoulli's equations, and their applications, venturi meter, orifice meter, pitot tube and hotwire anemometer. Impulse momentum equation, forces on a pipe bend. Measurement of pressure, and use of pressure measuring devices such as piezo, differential manometers and transducers.

UNIT-III : **Laminar and Turbulent Flow through Pipes:** Distinction between laminar and turbulent flows; Reynold's number and its significance. Upper and lower critical values of Reynold's numbers for flow in pipes. Development of laminar and turbulent flow in circular pipes. Hagen-Poiseuille equation; frictional losses in pipes. Darcy's equation. Estimation of Darcy's friction factor. Empirical formulae and Moody's chart.

UNIT-IV : **Boundary Layer Theory:** development of laminar and turbulent boundary layers on a flat plate, pressure gradient, and phenomenon of separation and control measures. Fluid flow over an aerofoil, flow around a cylinder at rest, rotational flow around a cylinder at rest, lift and drag forces, and coefficients; circulation and Magnus effect. Boundary layer thickness - displacement, energy, momentum, derivation and problems.

UNIT-V : **Compressible fluid flow:** Concepts of compressible flow, continuity, momentum and energy equation of compressible flow. Velocity of sound in compressible fluids. Mach Number and its significance. Adiabatic flow in perfect gas, stagnation pressure and temperature. Temperature, pressure, density ratios as functions of Mach number.

MECHANICS OF MATERIALS
(for Mechanical Engineering)

SYLLABUS FOR B.E. 2/4 I-SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2070
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Examine and interpret basic concepts of Strength of materials and analyze statically determinate and indeterminate structures to compute axial stresses, strains and deformations. 2. Analyze simple beams subjected to various types of loading and plot shear force and bending moment diagrams analytically and graphically and compute bending stresses. 3. Define and analyze shear stresses in beams and plot shear stress distribution across cross section of beams 4. Define and analyze problem of columns subjected to direct and bending stresses and predict the effect of eccentricity of loading on stresses by solution of numerical examples 5. Investigate the behaviour of thin and thick cylinders subjected to internal and external pressure and apply the concepts to the solution of example problems 	<ol style="list-style-type: none"> 1. Express his understanding of the basic concepts and principles of Strength of materials and solve problems of composite sections for axial stresses and strains and thermal effects and problems of statically determinate and indeterminate structures. 2. Construct shear force and bending moment diagrams for beams subjected to various types of loading (analytically and graphically) and compute stresses and strains in bending and shear in the cross section of beams subjected to transverse loading. 3. Compute direct and bending stresses in columns and beams subjected to eccentric loading. 4. Compute internal forces in space trusses by method of tension coefficients 5. Compute stresses in thin cylinders and thick cylinders subjected to internal and external pressure.

UNIT-I : Stresses and Strains: Definitions, types of stresses and strains. Elasticity and plasticity. Hooke's law. stress-strain diagrams for engineering materials. Modulus of elasticity. Poisson's ratio. Relationship between elastic constants. Linear and volumetric strains. Bars of uniform strength. Temperature stresses. Compound bars.

UNIT-II : Shear Force and Bending Moment: Bending moment and shear force diagrams for cantilever, simply supported beams and beams with overhangs carrying point and uniformly distributed loads. Relationship between intensity of loading, shear force and bending moment. Simple theory of bending. Moment of resistance. Modulus of section.

UNIT-III : Shear Stresses in Beams: Distribution of shear stresses in rectangular, I- and T-, standard steel and hollow sections. Compound stresses, principal stresses and strains. Mohr's circle of stress.

UNIT-IV : Deflections: Slope and deflections by the method of double integration in cantilever, simply supported beams and beams with overhangs subjected to point loads and uniformly distributed loads.

Torsion: Derivation of torsion formula for circular sections. Torsional stresses, angle of twist, power transmission, effect of combined bending and torsion. Close coiled and laminated springs.

UNIT-V : **Cylinders:** Stresses in thin and thick cylinders with internal and external pressures. Hoop and longitudinal stresses. Stresses in compound cylinders.

Direct and bending stresses; Core of rectangular, circular, I- and T- sections.

Columns and Struts: Euler and Rankine formulae for axial load applications. Secant and Perry formulae for eccentrically loaded columns.

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 4+2 Periods per week
Credits : 4

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2510
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will be able to</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Examine and interpret the deflection of simply supported, cantilever and overhanging beams 2. Analyze propped cantilevers, fixed and continuous beams for deflection, shear and bending moment 3. Locate shear centre and draw shear flow in simple sections. 4. Analyze torsion of circular shafts and analyse helical and bending springs and examine the concept of strain energy 5. Investigate the behaviour of columns and struts. 	<ol style="list-style-type: none"> 1. Express his understanding of methods of double integration, conjugate beam and Mohr's theorems to solve problems of deflection of beams and construct shear force and bending moment diagrams 2. Determine shear centre for simple sections. 3. Compute the torsional shear stress across the cross section of circular shafts. 4. Compute stresses in helical springs and compute strain energy in bars subjected to axial and flexural deformation 5. Compute the axial and bending stresses in columns using various formulae

UNIT-I : **Deflections:** Slope and deflection by the double integration method for cantilever and simply supported beams, and beams with overhangs carrying point loads, uniformly distributed and varying load over entire span. Moment area and conjugate beam methods.

UNIT-II : **Propped Cantilevers:** Cantilever beams on elastic and rigid props for point loads and uniformly distributed loads. Bending moment and shear force diagrams, and deflections.
Fixed Beams: Determination of shear force, bending moment, slope and deflection in fixed beams with and without sinking of supports for point loads, uniformly distributed loads, and uniformly varying load over entire span.

UNIT-III : **Continuous Beams:** Determination of moments in continuous beams with and without sinking of supports by the theorem of three-moments; bending moment and shear force diagrams.
Shear Centre: Concept and importance of shear centre shear flow and determination of shear centre of simple sections such as T sections and Channel sections with one axis of symmetry.

UNIT-IV : **Torsion:** Theory of torsion in solid and hollow circular shafts; shear stress, angle of twist, strength and stiffness of shafts. Transmission of power. Combined torsion and bending with and without end thrust. Determination of principal stresses and maximum shear stress. Equivalent Bending Moment and Twisting Moment.
Springs: Close and open coiled helical springs under axial load and axial twist.

UNIT-V : **Strain Energy:** Strain energy of resilience in determinate bars subjected to gradually applied loads and impact loads. Resilience of beams. Castigliano's theorem and its applications to beams. Theorem of reciprocal deflections.

Columns and struts: Euler's theory. Rankine – Gordon's formula, straight-line formula, effect of end conditions, slenderness ratio, eccentrically loaded columns, and Secant and Perry's formulae.

SURVEYING-II

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2520
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Understand basic surveying operations and computations using theodolite for various applications in field such as determination of elevations and setting of various curves 2. Learn tacheometry and hydrographic surveying 3. Study the modern techniques in surveying with total station, GPS, remote sensing, GIS. 	<ol style="list-style-type: none"> 1. Employ the methods to handle different cases to determine the elevations of various points using concepts of trigonometrical levelling and apply the corrections such as curvature, refraction and axis signal in geodetic observations 2. Compute the parameters required for setting out simple circular curve, reverse curve, compound curves and introduce the concepts of transition curves and vertical curves. 3. Report the various methods and capabilities of tacheometric surveying and hydrographic surveying 4. Apply the concepts of modern tools such as total station and GPS 5. Understand the concepts of Remote sensing and GIS and apply them in civil engineering problems

UNIT-I : **Measurement of vertical angles:** Trigonometrical levelling, calculation of elevations and distances of accessible and inaccessible objects, Problems. Geodetic observations, Refraction and curvature corrections, axis signal correction, determination of difference in elevation by single and reciprocal observations, problems.

UNIT-II : **Curves:** Theory of simple curves. Setting out simple curves by linear and instrumental methods. Obstructions in curve ranging. Compound curves – Elements – Solution to different cases. Reverse curves – Parallel straights and Non parallel straights. Introduction to transition curves and vertical curves.

UNIT-III: **Tacheometry:** Fixed and movable hair tacheometers. Principle of stadia method, distance and elevation formula for staff held vertical and normal, instrumental constants, Anallactic lens, tangential method, use of subtense bar. Reduction by calculations; Tacheometric tables;

Hydrographic Survey: Brief introduction, methods and applications.

UNIT-IV : **Total Station;** Features, concepts, types and applications

GPS: Overview of GPS, Functional system of GPS – Space segment, control segment and user segment, working principle of GPS/DGPS, Errors in GPS

UNIT-V : **Remote Sensing:** Definition, Elements of remote sensing, Electromagnetic spectrum and radiation, concept of spectral reflectance, Types of remote sensing, Remote sensing satellites, sensor resolutions, and applications to Civil Engineering.

GIS: Definition, components of GIS, Functions and advantages of GIS, applications to Civil Engineering

FLUID MECHANICS-I

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2530
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Learn the properties of fluids 2. Apply the laws of conservation of mass, energy and momentum for fluid flow. 3. Assess the phenomenon of flow in pipes and compressible fluid flow. 	<ol style="list-style-type: none"> 1. Compute properties of fluid, discuss about fluid statics and fluid kinematics. 2. Formulate equations based on conservation of mass, energy and momentum. Analyse forces on nozzles and bends. 3. Describe the devices used for discharge and pressure measuring devices and solve problems on them. 4. Identify, discuss and solve problems on compressible flow. 5. Compute Reynolds number, formulate equations for laminar and turbulent flow through pipes and water hammer in pipes.

UNIT-I : **Fluid Properties:** Definition of fluid, properties of fluids, density, specific weight, specific volume, specific gravity, bulk modulus, vapour pressure, viscosity. Newton's law of viscosity and its applications. Capillarity and surface tension.

Fluid Kinematics: Classification of fluid flow; steady, unsteady, uniform, non-uniform, one, two and three-dimensional flows, Rotational and irrotational flows. Concepts of streamline, stream tube, path line and streak line. Law of mass conservation. Continuity equation from control volume and system analysis. Stream function, and velocity potential function. Convective and local acceleration, flow net and its uses.

UNIT-II : **Fluid Dynamics:** Body forces and surface forces. Euler's equation of motion from control volume and system analysis.

Law of Energy Conservation: Bernoulli's equation from integration of Euler's equation. Significance of the Bernoulli's equation, limitations, modifications and application to real fluid flows, kinetic energy correction factor.

Impulse Momentum Equation: Momentum correction factor. Application of the impulse momentum equation to evaluate forces on nozzles and bends. Pressure on curved surfaces. Vortex flow; forced and free vortex.

UNIT-III : **Measurement of Pressure:** Piezometer and Manometers. Micro-manometer. Bourdon Gauge. Pressure Transducers, Absolute pressure and Gauge pressure.

Measurement of Discharge in Pressure Conduits: Venturi meter, orifice meter and nozzle meter, elbow meter, and rota-meter.

Measure of Discharge in Free Surface Flows: Notches and weirs.

Measurement of velocity – pitot tube; pitot static tube and current meter.

UNIT-IV : **Compressible Flow:** Compressibility of liquids and gases. Continuity equation, Bernoulli's energy equation (for isothermal and adiabatic processes) and impulse momentum equation. Velocity of a pressure wave for adiabatic and isothermal processes. Mach Number and Mach cone, and its applications. Stagnation pressure, density and temperature in adiabatic process.

UNIT-V : **Flow through Pressure Conduits:** Reynold's experiment and its significance. Upper and lower critical Reynold's Numbers. Critical velocity. Hydraulic gradient and Energy gradient line. Laminar flow through circular pipes. Hagen - Poiseuille equation. Characteristics of turbulent flow. Head loss in pipes. Darcy - Weisbach equation. Friction factor. Moody's diagram. Minor losses. Pipes in series and pipes in parallel. Unsteady flow in pipes: Water hammer phenomenon, pressure rise due to gradual and sudden valve closure.

<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Describe various types of natural resources available on the earth surface. 2. Explain the concepts, energy flow in ecosystem along with the biotic and abiotic components of various aquatic ecosystems. 3. Identify the values, threats of biodiversity, endangered and endemic species of India along with the conservation of biodiversity. 4. Explain the causes, effects and control measures of various types of pollutions and environmental protection acts. 5. Describe the methods for water conservation, the causes, effects of global warming, climate change, acid rain, ozone layer depletion, various types of disasters and their mitigation measures. 	<ol style="list-style-type: none"> 1. Describe the various types of natural resources. 2. Differentiate between various biotic and abiotic components of ecosystem. 3. Examine the values, threats of biodiversity, the methods of conservation, endangered and endemic species of India. 4. Illustrate causes, effects, control measures of various types of environmental pollutions and environmental protection acts. 5. Explain the causes, effects of climate change, global warming, acid rain and ozone layer depletion, various types of disasters and their mitigation measures and list the methods of water conservation and watershed management.

UNIT-I : **Environmental Studies:** Definition, scope and importance, need for public awareness. Natural resources: Water resources; floods, drought, conflicts over water, dams-benefits and problems. Effects of modern agriculture, fertilizer-pesticide problems, water logging salinity. Energy resources, growing energy needs, renewable and non-renewable energy sources. Land Resources, land as a resource, land degradation, soil erosion and desertification.

UNIT-II : **Ecosystems:** Concepts of an ecosystem, structure and functions of an ecosystem, producers, consumers and decomposers, energy flow in ecosystem, food chains, ecological pyramids, aquatic ecosystem (ponds, oceans, estuaries).

UNIT-III : **Biodiversity:** Genetic species and ecosystem diversity. Value of biodiversity, threats to biodiversity, endangered and endemic species of India, conservation of biodiversity.

UNIT-IV : **Environmental Pollution:** Causes, effects and control measures of air pollution, water pollution, soil pollutions, noise pollution, thermal pollution and solid waste & e-waste management.

Environment Protection Act: Air, water, forest and wild life acts.

UNIT-V : **Social Aspects and the Environment:** Water conservation, watershed management, and environmental ethics. Climate change, global warming, acid, rain, ozone layer depletion. EIA, population explosion.

Disaster Management: Types of disasters, impact of disasters on environment, infrastructure, and development. Basic principles of disaster mitigation, disaster management, and methodology, disaster management cycle, and disaster management in India.

Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> Learn DC, AC single phase and 3 phase circuits. Study the construction, principle of operation and characteristics of DC machines, 1 phase and 3 phase AC machines. 	<ol style="list-style-type: none"> Identify, analyze DC and AC circuits. Apply the fundamental laws to any electrical network to solve problems. Classify and demonstrate the performance of DC and AC machines.

UNIT-I : **D.C. Circuits:** Ohm's law, Kirchoff's laws, Resistance networks, Series, parallel, and series - parallel circuits with D.C. sources. Power loss in resistive elements.
Alternating Currents: Principles of production of AC waveform, frequency, Effective value and form factor, Effective values of current and voltage, Vector representation, Behaviour of pure inductance, capacitance and resistance with sinusoidal sources, Impedance and power factor, simple AC network with R, L & C elements under steady-state, Three-Phase circuits under balanced conditions, Star-delta connections, Power in balanced three-phase circuit.

UNIT-II : **Transformers:** Ideal transformers, Principles of transformation, Working of actual transformer under no-load and load conditions, approximate equivalent circuit, Open circuit & Short circuit tests, Regulation and efficiency.

UNIT-III : **Induction Motors:** Types of Induction motors, Production of rotating magnetic field, Synchronous speed, Torque production, Slip and speed of motor, Slip-torque characteristics. Starting of induction motors, Applications of induction motors.
Illumination: Units of light measurement, Coefficient of utilization and depreciation, Polar curves, Calculations of street lighting.

Learning Text book:

- Resources :**
- Gupta J.B., *Fundamentals of Electrical Engineering*, S.K.Kataria & Sons, 2002.
 - Mehta V.K., *Principles of Electrical Engineering*, S. Chand & Co., 1995.

ELECTRICAL AND MECHANICAL TECHNOLOGY
PART - B
MECHANICAL TECHNOLOGY

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 2 Periods per week
Credits : 2

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : ME 2080
Duration of Semester End Exam : 3 Hours

Course Objectives	Course Outcomes
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ul style="list-style-type: none"> • Learn the basic principles of excavating equipment, conveying equipment hoisting equipment, concrete producing equipment and pneumatic equipment 	<ul style="list-style-type: none"> • Demonstrate the applications of Earth Moving Equipments . • Determine the working principles and applications of Conveying Equipment & Hoisting Equipment. • Determine the Mechanism Involved in Concrete Producing Equipments and Pneumatic Equipment.

UNIT- I

Excavating Equipment: General description, operation, maintenance and selection of the following: Earth moving and Excavating Equipment: Shovels, Dragline, Clamshell, Cable excavator, Bucket wheel excavator, Tractor, Bulldozer, Scraper, Trenchers, Grader, Earth Compactors.

UNIT- II

Conveying Equipment: Belt conveyor, Screw Conveyor, Bucket Conveyor, Apron Conveyor, Aerial Ropeway.

Hoisting Equipment: Hoist winch. Differential and Worm geared chain hoists. Fork lift trucks, Guyed and stiffly derricks, swing and non- swing mobile crane, whirler crane, Construction elevator, passenger lift and Bucket elevators.

UNIT- III

Aggregate and Concrete Producing Equipment: Crushers – Jaw, Gyratory, Hammer and Roll Crushers, Screens – Stationary, Shaking and Vibrating screens. Concrete mixers and Concrete pumps.

Pneumatic Equipment: Reciprocating air- compressor, construction pneumatic tools; jack hammer, paving breaker, Rock drill, concrete vibrator.

Learning Resources:

1. Peurifoy R.L., *Construction Planning Equipment and Methods*, McGraw Hill Publishers, 1996.
2. Mahesh Varma, *Construction Equipment and its planning and application*, Metropolitan books Co, Delhi, 2004.
3. Goodes Spence, *Building and Civil Engineering Plant*, Crosby Lock Wood, 1995.

CONCRETE TECHNOLOGY

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 4 Periods per week
Credits : 3

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : CE 2540
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none"> 1. Acquire knowledge of properties of concrete and special concretes. 2. Study the utility of admixtures in concrete. 3. Design concrete mixes of requisite strength. 	<ol style="list-style-type: none"> 1. Explain the preparation and properties of concrete. 2. Examine the influence of admixtures on the properties of concrete. 3. Interpret the concepts of high density concrete, light weight concrete, ready mixed concrete, recycled aggregate concrete and high performance concrete . 4. Describe the mechanism, properties and applications of fibre reinforced concrete. 5. Design concrete mixes for requisite strength with I S Code, British and ACI methods.

UNIT-I : **Constituents of Concrete:** Types of cements and their composition. Tests on various properties of aggregates.

Properties of fresh concrete: Mixing and batching. Workability, factors effecting workability, various tests procedures. Segregation and bleeding. Vibration of concrete. Types of vibrators and their influence on composition. Analysis of fresh concrete.

UNIT-II : **Properties of Hardened concrete:** Strength of concrete. Water cement ratio. Gel space ratio. Effective water in the mix. Short term and long term properties of concrete. Tests and procedure. Influence of various parameters on strength of concrete. Relationship between various mechanical strengths of concrete. Curing of concrete. Maturity concept. Influence of temperature on strength of concrete. Stress-strain curves of concrete. Durability of concrete.

UNIT-III : **Mix design of concrete:** Basic considerations, Process of mix design. Factors in the choice of mix proportions and their influence. Quality control. Various methods of mix design. I.S.Code method. British and ACI methods.

UNIT-IV : **Admixtures used in concrete:** Classification of admixtures. Chemical and mineral admixtures. Influence of various admixtures on properties of concrete. Applications. Concept of ready mixed concrete. Fly ash concrete – properties and proportion of fly ash, applications; Recycled aggregate concrete.

UNIT-V : **Special Concrete:** High strength concrete, High performance concrete, Ferro cement, Light weight concrete, High density concrete. Self compacting concrete - their specialties and applications.

Fibre Reinforced Concrete: Need for Fibre reinforced concrete (FRC), Mechanism of FRC, types of fibres, fibre shotcrete.

FINISHING SCHOOL-II

SYLLABUS FOR B.E. 2/4 - SECOND SEMESTER

Instruction : 2+1 Periods per week
Credits : 2

Semester End Exam Marks : 70
Sessional Marks : 30

Subject Reference Code : HS 2020
Duration of Semester End Exam : 3 Hours

Course Objectives	Course Outcomes
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
1. Identify the various features and functions of human language and communication.	1. Listen and analyze context, tone and tenor before responding to others.
2. Develop the habit of listening effectively so as to analyze the speaker's tone and tenor.	2. Begin, sustain and end conversation.
3. Choose the appropriate words so as to speak and write accurately.	3. Respond to people in different situations.
4. Read various types of texts and sift information correctly.	4. Read with adequate speed and comprehend various texts.
5. Write notes and letters for personal and official purposes.	5. Use words appropriately in different contexts for speaking and writing.
	6. Use markers in written discourse.
	7. Construct grammatically correct sentences to write effectively.

Part-A Soft Skills (35 Marks)

UNIT-I: ORAL COMMUNICATION: LANGUAGE FUNCTION IN CONTEXT

- Interpreting a conversation
- Apologizing and responding to apologies
- Expressing opinions
- Complimentary close to a conversation
- Expressing sympathy and condolences
- Describing process

UNIT II: AURAL COMMUNICATION: LISTENING TO VARIOUS SPEAKERS AND TEXTS

- Listening for gist and specific information
- Note-taking
- Listening to identify cohesive devices and coherence in discourse

UNIT III: READING: COMMUNICATING WITH A GIVEN TEXT

- For supporting details to the main idea
- Note Making
- For discourse structure
- For basic referential and in inferential information

UNIT IV: WRITING: PERSONAL AND OFFICIAL COMMUNICATION

- Letters
- Email Etiquette
- Reports
- Resume writing

UNIT V: GRAMMAR- ADVANCED LEVEL

- Relative clauses
- Subject verb
- Prepositions
- Common errors

VOCABULARY- ADVANCED LEVEL

- Collocations
- Phrasal verbs
- Idioms
- Adjectives for descriptions

Part-B Technical Skills (35 Marks)

- Introduction to object oriented programming
- Classes
- Member variables
- Member functions / methods
- Constructor & Destructor
- Inheritance
- Virtual base class
- Abstract base class
- Polymorphism
- Function over loading
- Operator over loading

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 3 Periods per week
Credits : 2

Semester End Exam Marks : 50
Sessional Marks : 25

Subject Reference Code : CE 2511
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
<ol style="list-style-type: none">1. Determine the properties of materials under the action of various loads.2. Learn the ability to work in a team and make effective presentations.	<ol style="list-style-type: none">1. Determine Young's Modulus of materials of beams by conducting deflection test.2. Assess the quality of materials by conducting hardness test and impact test.3. Learn the operation of universal testing machine (UTM).4. Determining modulus of rigidity of materials by conducting torsion test and spring test.5. Practice working as a team member and make effective presentations.

List of Experiments

1. Determination of Young's modulus by conducting Deflection test on Cantilever beam
2. Determination of Young's modulus by conducting Deflection test on Simply supported beam
3. Izod Impact test
4. Direct tension test on metal rods
5. Brinnels and Rockwell Hardness test
6. Compression test on brittle and ductile materials
7. Determination of modulus of rigidity by conducting tension test on a helical spring
8. Determination of modulus of rigidity by conducting compression test
9. Determination of modulus of rigidity by conducting torsion test
10. Determination of modulus of elasticity by conducting deflection test on fixed beam
11. Determination of modulus of elasticity by conducting deflection test on continuous beam
12. Bend test on metal rod

SURVEYING-II LABORATORY

SYLLABUS FOR BE 2/4 - SECOND SEMESTER

Instruction : 3 Periods per week	Semester End Exam Marks : 50	Subject Reference Code : CE 2521
Credits : 2	Sessional Marks : 25	Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
1. Apply classroom knowledge in laboratory exercises and handling of Theodolite, GPS and Total station. 2. Learn the ability to work in a team and make effective presentations.	1. Determine the RL of a given point in different practical situations 2. Apply the principles of tacheometry in the field 3. Compute the distances, angles, reduced levels and setting out works using total station 4. Locate the ground features using GPS 5. Practice working as a team member and make effective presentations.

List of Experiments

1. Measurement of vertical angles; application to simple problems of height and distance using angle of elevation and depression.
2. R. L. of a given point using two instrument-stations in the same vertical plane as that of the point when the base of the point is inaccessible.
3. Difference in levels between two given points using two theodolite stations (baseline) in different planes.
4. Tacheometric survey; determination of constants for both the cases when the line of sight is horizontal and inclined.
5. Finding the gradient of a line connecting two points using Tangential tacheometry or stadia tacheometry.
6. Horizontal and vertical distance measurement using Total Station,
7. Location of ground features using total station and plotting the same.
8. Traversing and area calculation using Total Station - Plotting.
9. Plotting of simple curve using linear method.
10. Plotting of simple curve using angular method with theodolite and total station.
11. Location of ground features using GPS instrument and plotting the same after processing the data
12. Developing contour maps for a land using modern instruments.

Subject Reference Code : CE 2531
Duration of Semester End Exam : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<i>In this subject the students will</i>	<i>Upon the completion of this course students will be able to</i>
1. Calculate coefficient of discharge for orifice, mouth piece, notches and weirs and venturimeter.	1. Calculate coefficient of discharge for orifice, mouth piece, notches and weirs and venturimeter.
2. Estimate C_d for hemi-circular vessel.	2. Estimate C_d for hemi-circular vessel.
3. Calculate Reynold's number and classify types of flows.	3. Calculate Reynold's number and classify types of flows.
4. Calculate Darcy's coefficient of friction for turbulent flow in pipes.	4. Calculate Darcy's coefficient of friction for turbulent flow in pipes.
5. Verify Bernoulli's theorem.	5. Validate Bernoulli's theorem.

1. Determination of C_d , C_v and C_c for circular orifice
2. Determination of C_d for mouthpiece
3. Determination of C_d for V notch
4. Determination of C_d for rectangular notch
5. Determination of C_d for venturimeter
6. Determination of C_d for hemi-circular vessel
7. Determination of types of flows using Reynold's apparatus
8. Determination of Darcy's friction factor.
9. Verification of Bernoulli's theorem.
10. Determination of C_d for orifice meter
11. Determination of coefficient of sudden contraction (minor losses)
