DEPARTMENT VISION

Striving for excellence in teaching, training and research in the areas of Electronics and Communication Engineering

DEPARTMENT MISSION

To inculcate a spirit of scientific temper and analytical thinking, and train the students in contemporary technologies in Electronics & Communication to meet the needs of the industry."

PROGRAM EDUCATIONAL OBJECTIVES

- PEO I: To provide the required foundation in mathematics and engineering sciences that will enable the graduates to identify, analyze and solve engineering problems.
- PEO II: To impart in-depth knowledge and training in Electronics and Communication Engineering and help them succeed in their careers, higher education and research.
- PEO III: To inculcate professional and ethical values in the graduates to excel individually and in multi-disciplinary teams to solve engineering and societal problems.
- PEO IV: To provide the graduates with an environment that is conducive for developing excellence in leadership and encourage lifelong learning.

ABOUT THE COLLEGE

VISION

Striving for a symbiosis of technological excellence and human values

Established in 1981 by Vasavi Academy of Education under the stewardship of Late Sri Pendekanti Venkata Subbaiah, a veteran statesman of independent India and by a few eminent people from

different walks of life Vasavi College of Engineering represents a rich tradition of excellence in technology based education in a stimulating environment. From a modest beginning with just three undergraduate programs, viz., B.E. degree programs in Civil, Mechanical and Electronics & Communication Engineering, with dedicated efforts for over **33** years, it has now grown into a mighty center of learning with excellent and well-developed infrastructural facilities, offering 6 undergraduate programs, viz., B.E. in Civil, Mechanical, Electrical & Electronics, Electronics & Communication Engineering, Computer Science & Engineering, and Information Technology, in addition to a 3-year postgraduate program in Computer Applications (MCA), and 2-Year Postgraduate Programmes in CSE, ECE, EEE and Mechanical Engineering.

MISSION

To arm the young brains with competitive technology and nurture the holistic development of the individuals for a better tomorrow.

All the undergraduate (B.E) programs were accredited by National Board of Accreditation (NBA) for the academic years 2013-2015. The college sought fresh approval for NBA accreditation for two eligible PG programs and MCA program. The college has been recognized under 12(B) and 2(f) sections of the University Grants Commission (UGC).

The college has been granted **autonomy by the University Grants Commission**, New Delhi and Osmania University, Hyderabad for all the programs it offers for a period of six years with effect from 2014-15.

The College has 185 highly qualified and experienced faculty members consisting of Professors, Associate Professors and Assistant Professors and around **158** technical and supporting staff. The college has very good infrastructural facilities which go beyond the curriculum requirements. The college offers value-added courses in GIS, CAD/CAM, DSP, VLSI, Networking, J2EE and communication skills to bridge the gap between the curriculum and the requirements of the Industry. Finishing school has been made part of curriculum from the second year onwards to improve the skills of the students.

A Research & Development (R&D) Cell is established by personnel from industry / research organization to encourage the faculty and the students in acquiring additional qualifications and knowledge. This Cell also facilitates the faculty for interaction with industry/research organizations in getting sponsored research projects. In addition, the college

extends consultancy in various fields of engineering and technology. The Center for Counseling and Placement at Vasavi College of Engineering provides personal and career-related support to its students. The educational experience at the college is enlivened and enriched by an array of extra-curricular activities to fulfill the cultural and emotional needs of students.

A good number of ranks in university examinations are secured by our students every year. The all-round development of a student is achieved by exposing him/her to the outside world in a systematic and well planned manner. Just not marks and ranks, but also ethics and morals are incorporated into psyche of a student at Vasavi in a cautious way. This unification of tradition and technology makes Vasavi a place for paradise of learning.

QUALITY POLICY

Education without quality is like a flower without fragrance. It is our earnest resolve to strive towards high standards of teaching, training and developing human resources.

**ACADEMIC RULES AND REGULATIONS
FOR FOUR YEAR B.E DEGREE COURSE
w.e.f 2016-17 Academic Year**

1. RULES OF PROMOTION

ATTENDANCE: The *minimum aggregate attendance* percentage for BE program *is 75%*. On medical grounds 65% attendance with valid medical certificate will be considered. A candidate who did not meet above attendance requirements is not eligible to appear for the semester examinations.

A student is allowed to use medical condonation facility only 4 (four) times in the entire period of 8 semesters in the span of 4 years B.E program.

2. ASSESSMENT AND EVALUATION SYSTEM:

There will be continuous and comprehensive evaluation of students. The distribution of sessional (internal) and semester examination marks for **B.E program** are given below:

SESSIONALS EXAMS (internals)

Theory: 30 Marks

- 20 Marks each for two internal examinations in a semester and 10 marks for assignments and quizzes etc together.
- **Average of two tests** will be considered for calculating internal exams marks to which assignment/quiz marks will be added for obtaining total CIE marks.
- Every student should secure a **minimum of 40% aggregate marks in the internal exams.**

Lab: 25 Marks

- 15 marks for day-to-day laboratory class work which will be awarded based on the average of all experiments.
- 10 marks for the internal examination.

SEMESTER EXAMS

- Semester theory examinations will be conducted for 70 marks. A student should secure a minimum of 40% marks in each subject for a pass.
- Semester laboratory examinations will be conducted for 50 marks. A student should secure a minimum of 50% marks for a pass.

In addition, a student shall secure a minimum of 40% marks in a theory subject and 50% marks in lab from sessional exams and semester examinations put together for a pass.

3. PROMOTION RULES TO NEXT HIGHER CLASS

| S No | Semester/Class | Conditions to be fulfilled for |
|------|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | From 1/4 BE, I-SEM to 1/4 BE, II-SEM | Regular course of study of 1/4 B.E, I-SEM and 40% aggregate sessional marks in I-SEM |
| 2 | From 1/4 BE, II-SEM to 2/4 BE, I SEM | (a) Regular course of study of 1/4 B.E-II SEM and (b) Must have secured at least 50% of total credits prescribed for 1/4 B.E. |
| 3 | From 2/4 BE, I-SEM to 2/4 BE, II-SEM | Regular course of study of 2/4 BE, I-SEM and 40% aggregate sessional marks in II- SEM |
| 4 | From 2/4 BE, II-SEM to 3/4 BE, I SEM | (a) Regular course of study of 2/4 BE II SEM (b) Must have secured at least 50% of total credits prescribed for 2/4B. E and passed in all the subjects 1/4 B.E. |
| 5 | From 3/4 BE, I-SEM to 3/4 BE, II-SEM | Regular course of study of 3/4 B.E, I-SEM, and 40% aggregate sessional marks in I- SEM |
| 6 | From 3/4 BE, II-SEM to 4/4 BE, I SEM | (a) Regular course of study of 3/4 B.E, II-SEM (b) Must have secured at least 50% of total credits prescribed for 3/4 B.E and passed in all the subjects 2/4 B.E. |
| 7 | From 4/4 BE, I-SEM to 4/4 BE, II-SEM | (a) Regular course of study of 4/4 B.E, I-SEM and 40% aggregate sessional marks in II- SEM |

VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS)
DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

SYLLABUS FOR BE 2/4 FIRST SEMESTER
MATHEMATICS – III

| | | |
|--------------------------------|----------------------|-----------------------------------|
| Instructions: 4 periods / Week | Sem Exam Marks : 70 | Subject Ref Code : MA 2010 |
| Credits 3 | Sessional Marks : 30 | Duration of Sem Exam : 3 Hr. |

| COURSE OBJECTIVES | COURSE OUTCOMES |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Students should be able to | Students will be able to |
| <ol style="list-style-type: none"> Study the Fourier series, conditions for expansion of function and half range series Formulate and solve linear and nonlinear partial differential equations and apply partial differential equations to engineering problems viz., wave, heat and Laplace's equations. Study the methods to solve equations, apply numerical methods to interpolate, differentiate and integrate functions and to solve differential equations using numerical methods and solve systems of equations. Understand Random variables Probability Distributions, Statistics and their applications. Understand how to fit a curve to a given data, how Correlation between variables can be measured. | <ol style="list-style-type: none"> Expand any function which is continuous, discontinuous, even or odd in terms of its Fourier series. Find the Partial differential equations by eliminating arbitrary constants and functions and solve linear, nonlinear Partial differential equations and also will be able solve wave, heat and Laplace's equations in engineering problems . Solve algebraic and transcendental equations using Bisection method Regula-Falsi, Newton-Raphson, apply numerical methods to interpolate, differentiate functions, solve systems of equations and solve differential equations using numerical methods. Apply various probability distributions to solve practical problems, to estimate unknown parameters of populations and apply the tests of hypotheses. Solve problems on how fitting of a curve to given data using curve fitting, and also to find co-efficient of correlation and to determine regression lines and their applications. |

UNIT –I (8 classes)

Fourier Series : Introduction to Fourier series – Conditions for a Fourier expansion – Functions having points of discontinuity – Change of Interval - Fourier series expansions of even and odd functions - Fourier Expansion of Half- range Sine and Cosine series.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
BASIC CIRCUIT ANALYSIS

| | | |
|----------------------------------|----------------------|----------------------------|
| Instructions: 3+1 periods / Week | Sem Exam Marks : 70 | Subject Ref Code :EC2010 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam:3 Hr. |

UNIT –II (15 classes)

Partial Differential Equations and its Applications: Formation of first and second order Partial Differential Equations - Solution of First Order Equations – Linear Equation - Lagrange's Equation, Non-linear first order equations - Charpit's method

Applications of Partial Differential Equations: Classification of second order Partial Differential Equations- Method of Separation of Variables - Solution of One Dimensional Heat Equation - One Dimensional Wave Equation – Two Dimensional Heat Equation - Laplace's Equation.

UNIT-III (15 classes)

Numerical Methods: Solution of Algebraic and Transcendental equations- Bisection method - Regula Falsi method- Newton-Raphson Method - Interpolation- Newton's Forward and Backward Interpolation Formulae - Lagrange's Interpolation Formula - Newton's Divided Difference Formula - Numerical Differentiation -Interpolation approach- Numerical Solutions of Ordinary Differential Equations - Taylor's Series Method - Euler's Method - Runge-Kutta Method of 4th order(without proofs).

UNIT-IV (12 classes)

Probability and Statistics: Random Variables - Probability Distribution function for Discrete and Continuous Random variables - Expectation – Variance – Moments -Moment Generating Function- Poisson and Normal Distributions – Testing of Hypothesis - Tests of Significance - t-test - F- test - χ^2 - test for small samples.

UNIT-V (6 classes) Curve Fitting: Curve fitting by the Method of Least Squares - Fitting of Straight line -- Regression - Lines of Regression - Correlation – Karl Pearson's Co-efficient of Correlation.

SUGGESTED READINGS:

2. Dr.B.S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publishers.
3. Dr.B.S Grewal, Numerical Methods, Khanna Publishers.
4. Gupta & Kapoor, Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi.
5. Kreyszig E, Advanced Engineering Mathematics, 8th Edition, John Wiley & Sons Ltd, 2006.
6. N.P.Bali & Manish Goyal A text book of Engineering Mathematics, Laxmi Publication.
7. S.S.Sastry Numerical Analysis–PHI Learning Ltd.,

| Course Objective: | Course Outcomes |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Course Objective: Students will be able to analyze the response of the circuit and using various concepts such as network theorems, mesh & nodal analysis and topology and the frequency response of the circuit. | At the end of the course students will be able to: <ul style="list-style-type: none"> • Solve circuits using various theorems and network topology. • Analyze the circuits for dc, sinusoidal and exponential inputs and also magnetically coupled circuits. • Find the frequency response and phasor analysis of ac circuits. • Able to apply cut-set and tie-set topology concepts and test the principle of duality for a circuit. |

UNIT-I

Basic concepts of Electric Circuits: Lumped circuit elements, Dependent and independent voltage and current sources, Energy and power, Ohm's law, Kirchhoff's laws, network reduction techniques, nodal and super nodal analysis, mesh and super mesh analysis.

Network Theorems to DC circuits: Source transformation, Star and Delta transformations, Superposition theorem, Thevenin's and Norton's Theorem, Maximum power transfer theorem, Reciprocity theorem, Tellegen's theorem

UNIT-II

Response of circuits for Unit step input: Linear time invariant first order and second order circuits, Formulation of Integro differential equations. Transient and steady state analysis for series and parallel RL, RC and RLC circuits, Zero Input Response (ZIR), Zero State Response (ZSR) and complete response.

UNIT-III

Response of circuits for sinusoidal and exponential inputs: Transient and steady state response of RC, RL and RLC networks for Sinusoidal and exponential signals. Network theorems to a.c circuits.

Calculation of power in a.c circuits: phasor and vector representations average power, apparent power, complex power, power triangle.

UNIT-IV

Magnetic Coupled Circuits: Concept of Self, Mutual inductance, co-efficient of coupling, dot convention rules and analysis of simple circuits.

Resonance: Analysis of Series and Parallel resonance, Q-factor, Selectivity and bandwidth.

UNIT-V

Frequency Domain Analysis: Concept of complex frequency, Impedance and Admittance functions, Pole-Zero cancellation, Calculation of natural response from pole zero plots.

Network Topology: Topological description of Network: graph, tree, co-tree, link, chord, incidence matrix, tieset, tieset matrix, cutset, cutset matrix. Formation of node and loop equations. Principle of duality and dual networks.

| | | |
|----------------------------------|----------------------|----------------------------|
| Instructions: 3+1 periods / Week | Sem Exam Marks : 70 | Subject Ref Code: EC2020 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To familiarize the students with various two terminal and three terminal electronic devices working and implementation and use in the design of real time electronic products. | <ul style="list-style-type: none">• Analyze the operation and design aspects of diode under various conditions.• Illustrate the use of diode in practical applications and gain knowledge on special diodes.• Design aspects and functionality of Bipolar junction Transistor and analyzing its operation as an amplifier• Design aspects and functionality of Field effect transistors. |

UNIT – I

Materials: Types of materials – gasses, Liquids & solids, Different types of solids – conductors, insulators & semiconductors (intrinsic, N-type & P-type), Interface between metal-metal, metal-semiconductor and semiconductor-semiconductor (PN & shotkey contact).

Junction Diode : Different types of PN Junction formation techniques, PN Junction Characteristics, biasing- band diagrams and current flow, Diode current equations under forward bias and reverse bias conditions, Junction breakdown in diodes and breakdown voltages, effect of temperature on diode characteristics, Diode as a circuit element, small signal diode models, Junction capacitance under forward bias and reverse bias, Diode switching characteristics, Zener Diodes, Zener voltage regulator and its limitation.

UNIT – II

PN Diode Applications: Half wave, Full wave and Bridge rectifiers - their operation, performance characteristics, and analysis; Filters (L, C, LC and CLC filters) used in power supplies and their ripple factor calculations, design of Rectifiers with and without Filters. **Specials Diodes:** Elementary treatment on the functioning of Tunnel, Varactor, Photo, Light Emitting diodes. **Display devices:** Study of block diagram of typical display device.

UNIT – III

Bipolar Junction Transistor: Transistor Junction formation (collector-base, base-emitter Junctions) Transistor biasing-band diagram for NPN and PNP transistors, current components and current flow in BJT, Early effect, BJT input and output characteristics in CB, CE CC configuration, BJT as an amplifier, BJT biasing techniques, Thermal runaway, heat sinks and thermal stabilization, operating point stabilization against temperature and device variations, stability factors, Bias stabilization .

UNIT – IV

Small Signal Transistors equivalent circuits: Small signal low frequency h-parameter model of BJT, Determination of h parameters, analysis of BJT amplifiers using h-parameter, comparison of CB, CE and CC amplifier configurations, Analysis of BJT amplifier with approximate model. **Special Devices:** working of UJT, SCR, DIAC, TRIAC

UNIT – V

Junction Field Effect Transistors (JFET): JFET formation, operation & current flow, pinch-off voltage, V-I characteristics of JFET. JFET biasing-zero drift biasing. Low frequency small signal model of FETs. Analysis of CS, CD and CG amplifiers and their comparison. FET as an amplifier and as a switch. MOSFETs: MOSFETs, Enhancement & Depletion mode MOSFETs, V-I characteristics. MOSFET as resistor, MOSFET as a switch. Introduction to CMOS.

| <ul style="list-style-type: none">• To understand and analyze electromagnetic field theory, with an emphasis's on electromagnetic waves. | At the end of the course students will be able to: <ul style="list-style-type: none">• Define and describe various laws related to static and dynamic EM fields.• Formulate and apply the Maxwell's equations and Electromagnetic field problems.• Describe and analyze the EM wave propagation. |

UNIT - I

Cartesian, Cylindrical and spherical coordinate systems - review of vector analysis - Coulomb's Law. Electric Field Intensity. Electric field due to different charge distributions. Line of charge, sheet of charge and volume charge distributions. Electric flux, flux density, Gauss's Law and application. Divergence theorem.

UNIT-II

Energy and potential, Potential field of system of charges, potential gradient. Energy density, Boundary conditions in static electric field, Capacitance of two-wire line, Continuity equation, current density, Poisson's equation, Laplace equation, Uniqueness theorem, Applications of simple practical cases.

UNIT-III

Steady magnetic field, Biot-Savart's law, Ampere's law, Stroke's theorem, Magnetic scalar and vector potentials. Magnetic boundary conditions, Magnetomotive force, Permeability, self and mutual inductances, Evaluation of inductance of solenoid, toroid, coaxial cable, two-wire transmission line.

UNIT-IV

Time varying fields, Maxwells equations, Boundary conditions in EM field. EM wave equations in free space and conductors. Sinusoidal variations. Uniform plane wave, wave motion in free space. Wave motion in perfect dielectrics, lossy dielectrics and conductors. Polrization - linear, elliptical and circular polarizations.

UNIT-V

Energy theorem and Poynting vector, Instantaneous, average and complex Poynting vector. Reflection of plane waves by a perfect conductor, normal and oblique incidence. Reflection of plane waves by a perfect dielectric, normal and oblique incidence. Reflection coefficient. Transmission coefficient, power and energy calculations.

Explain the concepts, energy flow in ecosystem along with the biotic and abiotic components of various aquatic ecosystems. 3. Identify the values, threats of biodiversity, endangered and endemic species of India along with the conservation of biodiversity. 4. Explain the causes, effects and control measures of various types of pollutions and environmental protection acts. 5. Describe the methods for water conservation, the causes, effects of global warming, climate change, acid rain, ozone layer depletion, various types of disasters and their mitigation measures. | <p><i>Upon the completion of this course students will be able to</i></p> <ol style="list-style-type: none"> 1. Describe the various types of natural resources. 2. Differentiate between various biotic and abiotic components of ecosystem. 3. Examine the values, threats of biodiversity, the methods of conservation, endangered and endemic species of India. 4. Illustrate causes, effects, control measures of various types of environmental pollutions and environmental protection acts. 5. Explain the causes, effects of climate change, global warming, acid rain and ozone layer depletion, various types of disasters and their mitigation measures and list the methods of water conservation and watershed management. |

UNIT - I

Environmental Studies: Definition, scope and importance, need for public awareness. Natural resources: Water resources; floods, drought, conflicts over water, dams-benefits and problems. Effects of modern agriculture, fertilizer-pesticide problems, water logging salinity. Energy resources, growing energy needs, renewable and non-renewable energy sources. Land Resources, land as a resource, land degradation, soil erosion and desertification.

UNIT – II

Ecosystems: Concepts of an ecosystem, structure and functions of an ecosystem, producers, consumers and decomposers, energy flow in ecosystem, food chains, ecological pyramids, aquatic ecosystem (ponds, oceans, estuaries).

UNIT – III

Biodiversity: Genetic species and ecosystem diversity. Value of biodiversity, threats to biodiversity, endangered and endemic species of India, conservation of biodiversity.

UNIT – IV

Environmental Pollution: Causes, effects and control measures of air pollution, water pollution, soil pollutions, noise pollution, thermal pollution and solid waste & e-waste management.

Environment Protection Act: Air, water, forest and wild life acts.

UNIT – V

Social Aspects and the Environment: Water conservation, watershed management, and environmental ethics. Climate change, global warming, acid, rain, ozone layer depletion. EIA, population explosion.

Disaster Management: Types of disasters, impact of disasters on environment, infrastructure, and development. Basic principles of disaster mitigation, disaster management, and methodology, disaster management cycle, and disaster management in India.

| <ul style="list-style-type: none">• The four major skills of language learning, listening, speaking, reading and writing provide the right key to success.• The main objective of this finishing school curriculum is to involve content for all the above mentioned four skills in teaching English and to get students proficient in both receptive and productive skills | <ul style="list-style-type: none">• Respond to questions and Engage in an informal conversation.• Narrate a message/story/incident, both verbally and in writing.• Describe an event/a session/ a movie/ an article.• Respond to others while being in a casual dialogue.• Comprehend facts given and respond in an appropriate manner.• Construct sentences in a coherent form• Provide explanations• Recognize and list the key points in a topic/message/article.• Participate in group and forum discussions by providing factual information, possible solutions, and examples.• Debate on a topic by picking up the key points from the arguments placed.• Provide logical conclusions to the topics under discussion.• Prepare, present, and analyze reports |

UNIT I – FUNDAMENTALS OF COMMUNICATION

Competencies:

- Basic conversational ability.
- Write e-mails introducing themselves & their purpose

Topics covered

Greeting and Introductions

Small Talk

Recalling

Topic Level Details

Greeting & Introductions

Competencies:

- Greeting appropriately

- Introducing themselves, a friend
- Responding to simple statements and questions both verbally and in writing
- Seeking introduction from others about themselves or about any topic.
- Writing an email with appropriate salutation, subject lines, self-introduction, and purpose of mail.

Small Talk

Competencies:

- Identifying the topic of conversation.
- Speaking a few sentences on a random list of topics
- Reading simple information like weather reports, advertisements
- Seeking clarifications.

Recalling

Competencies:

- State takeaways from a session or conversations

UNIT II : NARRATIONS AND DIALOGUES

Competencies:

- Framing proper phrases and sentences to describe in context
- Speaking fluently with clarity and discrimination
- Responding to others in the dialogue.

Topics covered

Paraphrasing

Describing

Topic Level Details

Paraphrasing

Competencies:

- Listen for main ideas and reformulating information in his/her own words
- Draw appropriate conclusions post reading a passage.
- Writing an email confirming his/her understanding about a topic

Describing

Competencies:

- Speaking, Reading, and Writing descriptive sentences and paragraphs.

UNIT-III: RATIONAL RECAP

Competencies:

- Organizing and structuring the communication
- Detailing a topic
- Summarizing a topic.

Topics Covered:

Organizing

Sequencing

Explaining

Summarizing

Topic Level Details

Organizing

Competencies:

- Organizing the communication based on the context and audience

Sequencing

Competencies:

- Structuring the content based on the type of information.

Explaining

Competencies:

- Explaining a technical/general topic in detail.
- Write an email giving detailed explanation/process

Summarizing

Competencies:

- Recapitulating

UNIT-IV: PROFESSIONAL DISCUSSIONS AND DEBATES

Competencies:

- Analytical and Probing Skills
- Interpersonal Skills

Topics Covered:

Discussing

Debating

Topic Level Details

Discussing

Competencies:

- Thinking
- Assimilating

Debating

Competencies:

- Comprehending key points of the debate and note decisive points including supporting details.
- Construct a logical chain of arguments and decisive points.
- Writing a review about a product by providing reasons, causes, and effects

UNIT -V: DRAWING CONCLUSIONS AND REPORTING

Competencies:

- Reasoning skills - Coherent and logical thinking
- Reporting and Analyzing skills.

Topics Covered:

Concluding
Reporting

Topic Level Details

Concluding

Competencies:

- Analyzing the points discussed.
- Connecting all points without gaps.
- Identifying clinchers.
- Communicating the decisions

Reporting

Competencies:

- Reporting an incident
- Writing/Presenting a project report

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING SYLLABUS FOR BE 2/4 FIRST SEMESTER ELECTRONIC DEVICES LAB

| | | |
|-------------------------------|---------------------|----------------------------|
| Instructions: 3periods / Week | Sem Exam Marks : 50 | Subject Ref Code: EC2311 |
| Credits: 2 | Sessional Marks :25 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|---------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To develop an understanding of the underlying concepts of Electronic devices and circuits with Qualitative approach | At the end of the course students will be able to: <ul style="list-style-type: none">• Verify the working of PN Junction diodes, transistors and their characteristic behavior.• Learn design of different rectifiers with various filter combinations.• Set up bias point in a transistor.• Build an amplifier and find the frequency response of amplifier. |

List of Experiments:

1. Zener Diode Characteristics and Zener as Voltage Regulator
2. Design of Half wave and Full Wave Rectifiers with and without Filters
3. Characteristics of photo diode
4. Common Base characteristics of BJT and measurement of h – parameters
5. Common Emitter characteristics of BJT and measurement of h- parameters,
6. JFET Characteristics and measurement of its small signal parameters.
7. Characteristics of UJT and Seven Segment LED Display
8. BJT Biasing
9. FET Biasing
10. Analysis and bandwidth calculation of Single stage RC coupled CE Amplifier.
11. Analysis and bandwidth calculation of Single stage RC coupled CC Amplifier.
12. Single stage FET Common Source RC coupled Amplifier
13. Characteristics of SCR and study of TRIAC characteristics
14. Analysis & Design of circuits using PSPICE (Minimum of five experiments).

Suggested Reading:

1. Robert Diffenderfer, "Electronic Devices Systems and Applications", Cengage Learning India Private Limited, 2010
2. Paul B. Zbar, Albert P. Malvino, Michael A. Miller, "Basic Electronics, A Text - Lab Manual", 7thEdition, TMH 2001

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
BASIC CIRCUITS AND SIMULATION LAB

| | | |
|-------------------------------|---------------------|----------------------------|
| Instructions: 3periods / Week | Sem Exam Marks : 50 | Subject Ref Code: EC2321 |
| Credits: 2 | Sessional Marks :25 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To apply the concepts of circuit theory for a given complex circuit and verify its response using discrete components and CAD tools. | At the end of the course students will be able to: <ul style="list-style-type: none"> Identify the appropriate network theorem to analyze for a given network. To determine different two port network parameters for a given network and also characterize the network from the two port parameters. To simulate and find the response of a given circuit using CAD tools. |

List of Experiments:**Part -A**

1. Verification of superposition theorem and Thevenin's theorems
2. Verification of maximum power transfer theorem
3. Verification of Tellegan's theorem
4. Measurement of two-port network parameters
5. Design & verification of Series Resonance
6. Design & verification of Parallel Resonance

Part -B (using SPICE)

1. Determination of two port network parameters in the presence of at least one dependent source.
2. Transient response of RL and RC circuits.
3. Verification of network theorems in the presence of dependent source.
4. Transient response of RLC series and parallel circuits.
5. Measurement of power factor and power relationships.

Suggested Reading:

1. Muhammad H. Rashid, "Spice for Circuits and Electronics Using PSPICE" 2/e, 2001, PHI.
2. John O. Attia, "PSPICE and MATLAB for Electronics: An Integrated Approach" 2/e, CRC Press, 2002.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
BASIC ELECTRICAL ENGINEERING LAB

| | | |
|-------------------------------|---------------------|----------------------------|
| Instructions: 3periods / Week | Sem Exam Marks : 50 | Subject Ref Code: EE2041 |
| Credits: 2 | Sessional Marks :25 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To impart the practical knowledge on measuring of 3-phase power, performance and speed control of DC machines and AC machines. | <ul style="list-style-type: none"> Identify suitable instruments in the application of DC and AC machines. Analyze the performance and speed control of DC Machines. Analyze the performance and speed control of Induction motor. Analyze the performance of an alternator. Analyze the performance of single phase transformer. Compute a 3-phase power by using 2-Watt meters. |

List of Experiments:

1. Magnetization curve of a separately excited D.C. generator.
2. The load characteristics of a shunt generator.
3. The load characteristics of a series generator.
4. Performance characteristics of a D.C. shunt motor
5. The load characteristics of a D.C. series motor
6. The performance characteristic of DC compound motor.
7. Speed control of D.C. motor
8. O.C. and S.C. tests on single phase transformer
9. Load test on single phase transformer
10. Performance characteristics of a three phase induction motor
11. Speed control methods of induction motor
12. Regulation of alternator by O.C. and S.C. tests.
13. Measurement of three-phase power by two Wattmeter method.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
BASIC ELECTRONICS (For CSE)

| | | |
|----------------------------------|---------------------|----------------------------|
| Instructions: 3+1 periods / Week | Sem Exam Marks : 70 | Subject Ref Code: EC2130 |
| Credits: 3 | Sessional Marks :30 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> The course enables the students to acquire the knowledge of various electronic devices and their applications. | At the end of the course students will be able to: <ul style="list-style-type: none"> Employ different electronic devices to build electronic circuits such as rectifiers, amplifiers, voltage regulators and oscillators. Implement digital circuits such as adders and subtractors using logic gates. Convert real time signals into corresponding electrical signals using different types of transducers. |

UNIT - I

Semiconductor Theory: Classification of semiconductors, Energy Levels, Conductivity, Mobility, Diffusion and Drift currents, Hall Effect, Characteristics of P-N Junction diode, Parameters and Applications. **Rectifiers:** Half wave and Full wave Rectifiers (Bridge, center tapped), ripple factor and efficiency, comparison of rectifiers, Filters, types of filters, Rectifiers with and without filters

UNIT - II

Transistors: Bipolar Junction Transistor, Construction, Types, Working principle, Configurations, Transistor parameters, Transistor as an amplifier, Problems, h-parameter equivalent circuits. Field effect transistor, Construction and working of JFET, Parameters and applications of JFET, Types of MOSFET (depletion and enhancement), Comparison of BJTs with JFETs; **Regulators:** Characteristics of Zener Diode, Voltage Regulation, Zener diode as voltage regulator, IC voltage regulators.

UNIT - III

Feedback Concepts – Basic concept of feedback, Types of feedback, Feedback topologies, General characteristics of Negative feedback amplifiers; **Oscillators** – Classification of Oscillators, Types, LC Type and RC Type Oscillators and Crystal Oscillators (Qualitative treatment only)

UNIT - IV

Operational Amplifiers – Introduction, Characteristics of ideal Operational amplifier, Operational amplifier stages, Parameters, Open loop and closed loop configurations, Applications (Adder, Subtractor, Voltage follower, Integrator, Differentiator, Instrumentation Amplifier); **Digital circuits:** Boolean Algebra, Logic Gates, Combinational circuits such as half and full adders, half and full subtractors.

UNIT - V

Data Acquisition systems: Introduction, Classification of transducers, Capacitive transducer, Inductive transducer, LVDT, Electrical strain gauges, Temperature transducers (Thermocouple), Piezoelectric transducer, Photoelectric transducer; **Photo Electric Devices:** Photo diode, Photo Transistor, LED, LCD; **Industrial Devices:** SCR, TRIAC, DIAC, UJT - Construction, Working principle and Characteristics only; **Display Systems:** Constructional details of C.R.O and Applications.

Suggested Reading :

1. S.Shalivahan, N. Suresh Kumar, A Vallavea Raj Electronic Devices and Circuits Tata McGraw Hill, 2003.
2. Jacob Milman & C., Halkias, Electronic devices Eighth Edition, Reprinted, Mc Graw Hill, 1985.
3. Ramakanth A. Gayakwad, Op-AMPS and Linear Integrated Circuits, 3rd edition, Prentice Hall of India, 1985.
4. Mooris Mano, Digital design, 3rd edition, Prentice Hall of India, 2002.
5. Cooper, Electronic Measurement and Instrumentations.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
ELECTRONICS ENGINEERING – I (For EEE)

| | | |
|---------------------------------|---------------------|----------------------------|
| Instructions: 3+1periods / Week | Sem Exam Marks : 70 | Subject Ref Code: EC2140 |
| Credits: 3 | Sessional Marks :30 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To familiarize the students with various electronic devices working and analyzation and design of simple real time electronic products. | At the end of the course students will be able to: <ul style="list-style-type: none"> • Define and describe the principle of operation of electronic devices like PN junction diode, Zener diode, BJT and FET etc. • Analyze and design various rectifier circuits with and without filters for a regulated DC power supply. • Illustrate the use of diode in practical applications and gain knowledge on special diodes. • Analyze and compare the small signal low frequency Bipolar junction Transistor and Field effect transistor amplifiers in different configurations with the help of their equivalent circuits. |

UNIT – I

Semiconductor diodes and Rectifiers: Review of semiconductor physics, p-n junction as a rectifier, V-I characteristics, temperature dependence of V-I characteristics; Breakdown of Junctions-Zener and Avalanche. Half wave, full wave, bridge rectifiers, L, C, π -section filters; Regulation and Ripple characteristics

UNIT – II

Transistors and their biasing: BJT, current components; CE, CB, CC configurations; characteristics. Transistor as an amplifier; h-parameters; Analysis of CE, CB, CC amplifiers. Operating point, bias stability, stabilization circuits, fixed bias, collector to base bias and Emitter bias.

UNIT – III

Field Effect Transistors and their biasing: Principles of V-I characteristics of JFET and MOSFETs; Depletion and Enhancement modes, small signal equivalent circuit, FET as a CS amplifier. Biasing of JFET's and MOSFET's source self-bias, biasing for zero current drift, biasing against device variations, Characteristics of UJT, SCR, DIAC & TRIAC.

UNIT – IV

Low frequency BJT amplifier Circuits: Cascading amplifier stages, simplified analysis for three amplifier configurations, Miller's theorem-High input impedance transistor circuits, cascade configuration, Difference amplifier.

UNIT – V

Multistage amplifiers: Classification of amplifiers, Distortion in amplifiers, Frequency response of RC coupled amplifiers, effect of emitter (source) by pass capacitor on LF response, Transformer coupled amplifiers, step response, Bandwidth of cascaded stages.

Suggested Reading:

1. Jacob Millman and Halkias," Electronic devices and circuits", 2nd Edition, McGraw Hill Publication, 3/e,2010.
2. Jacob Millman, Christos C. Halkias, "Integrated electronics: analog and digital circuits and systems", 2nd Ed, Mc Graw-Hill, 2010.
3. David Bell, "Fundamentals of Electronic Devices and Circuits", 5th Edition, Oxford University Press 2008.
4. Donald L schilling & Charles Belove, Electronic circuits: Discrete & Integrated, McGraw Hill International Edition, 3rd Edition,1989.
5. Robert L. Boylestad, Louis Nashelsky "Electronic Devices and Circuit Theory", 10th Edition, PHI, 2009

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 FIRST SEMESTER
BASIC ELECTRONICS LAB (FOR CSE)

| | | |
|-------------------------------|---------------------|----------------------------|
| Instructions: 3periods / Week | Sem Exam Marks : 50 | Subject Ref Code: EC2391 |
| Credits: 2 | Sessional Marks :25 | Duration of Sem Exam:3 Hr. |

| Course Objective: | Course Outcomes |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> Lab course enables the students to verify the characteristics of various electronic devices and circuits. | At the end of the course students will be able to: <ul style="list-style-type: none"> Verify input/output characteristics of active devices and to compute their parameters. Perform operations such as addition, subtraction, comparison of voltage levels using operational amplifier. Implement digital adder and subtractor using logic gates. |

1. Characteristics of Semiconductor (Si and Ge) and Zener diodes
2. CRO Applications
3. Full wave rectifier with and without filter
4. Zener Voltage Regulator
5. Characteristics of BJT (CB and CE)
6. Characteristics of FET
7. Amplifier with and without feedback
8. RC Phase shift oscillator
9. Hartley oscillator and Calpitt's Oscillator
10. Applications of Operational Amplifier: Adder, Subtractor, Comparator.
11. Verifications of Logic gates
12. Realization of Half and Full adder

Suggested Reading :

1. Paul B. Zbar, Albert P. Malvino, Michael A. Miller, Basic Electronics, A Text-Lab Manual, 7th Edition, TMH, 1994.
2. Paul B. Zbar, Industrial Electronics, A Text – Lab Manual, 3rd Ed, TMH, 1983.

General Note :

1. There should not be more than 2 students per batch while performing any of the lab experiment.
2. Mini Project cum design exercise:
 - a) The students must design, rig-up, and test the circuits wherever possible and should carry out the experiments individually.
 - b) This exercise carries sessional marks of 10 out of 25, while the remaining 15 marks are for the remaining lab exercises.

| Students should be able to | Students will be able to |
| <ol style="list-style-type: none"> Understand the Definition of Laplace and inverse Laplace Transforms-Shifting Properties and various theorems and how to apply them in solving Differential Equations. Analyze the characteristics and properties of and Z – transforms and solve the Difference Equations. Study the concept of Fourier and inverse Fourier Transform of a function and various properties. Understand the Analytic functions, to evaluate a line integral of a function of a complex variable using Cauchy's integral formula, to evaluate real integrals using complex integration and how to evaluate Laurent Series and residues. | <ol style="list-style-type: none"> Evaluate Laplace transforms and inverse Laplace transforms of functions. Apply Laplace transforms to solve ordinary differential equations arising in engineering problems. Apply Z-transform in the analysis of continuous time and discrete time systems and also solve the Difference Equations using Z-transform. Determine Fourier transform, Fourier sine and cosine transform of a function. Know the condition(s) for a complex variable function to be analytic and/or harmonic and state and prove the Cauchy Riemann Equation and use it to show that a function is analytic and to define singularities of a function, know the different types of singularities, evaluate contour integrals using the Cauchy Integral Theorem and the Cauchy Integral Formula and will be able to determine transformation in a complex space. |

UNIT- I (12 classes)

Laplace Transforms: Introduction to Laplace transforms - Inverse Laplace transform - Sufficient Condition for Existence of Laplace Transform – Properties of Laplace Transform- Laplace Transform of Derivatives - Laplace Transform of Integrals - Multiplication by t^n - Division by t – Evaluation of Integrals by Laplace Transforms- Convolution Theorem - Application of Laplace transforms to Linear Differential Equations with Constant Coefficients.

UNIT –II (8 classes)

Fourier Transforms: Mathematical transforms, Fourier Integral Theorem - Fourier Transforms – Inverse Fourier Transform - Properties of Fourier Transform –Fourier Cosine & Sine Transforms - Convolution Theorem.

UNIT-III: (8 classes)

Z-Transforms: Introduction - Z-transforms of Standard sequences - Linearity Property – Damping Rule - Shifting Properties- Multiplication by n - Initial and Final value theorems – Inverse Z-Transforms- Convolution Theorem – Application of Z-Transforms to Difference Equations.

UNIT-IV (15 classes)

Functions of Complex Variables: Limits and Continuity of function - Differentiability and Analyticity - Necessary & Sufficient Condition for a Function to be Analytic - Milne-Thomson's method - Cauchy-Riemann Equations in Polar Form - Harmonic Functions - Complex Integration - Cauchy's Theorem - Extension of Cauchy's Theorem for multiply connected regions- Cauchy's Integral Formula.

UNIT-V (10 classes)

Power series - Taylor's Series - Laurent's Series (without proofs) - Zeros and Singularities –Residues – Cauchy's Residue Theorem -Evaluation of Real Integrals using Residue Theorem -Bilinear Transformation.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER
ANALOG ELECTRONIC CIRCUITS

| | | |
|-------------------------------|----------------------|------------------------------|
| Instructions: 3+1Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: EC 2150 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|-----------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To familiarize the students with design and working of various amplifiers and analyze concepts of positive and negative feedback. | At the end of the course students will be able to: <ul style="list-style-type: none"> • Analyze and design various amplifier circuits. • Apply feedback concepts in the amplifier and oscillator circuits. • Design power amplifiers and their stability considerations. • Distinguish ideal and practical Op-amp characteristics |

UNIT – I

Small signal amplifiers: Classification of amplifiers, BJT and FET high frequency equivalent circuits, Mid-band analysis of single and multistage amplifiers, low frequency and high frequency analysis of single and multistage RC coupled and Transformer coupled amplifiers with BJT and FET.

UNIT – II

Feedback amplifiers: The feedback concept, general characteristics of negative feedback, Effect of negative feedback on input output impedances, voltage series and shunt feedbacks. Stability considerations, local versus global feedback

UNIT – III

Oscillators: Positive Feedback and conditions for sinusoidal oscillations, RC oscillator, LC oscillator Crystal oscillator, Amplitude and frequency stability of oscillator.

Regulators: Transistorized series and shunt regulators

UNIT – IV

Large signal amplifiers: BJT as large signal audio amplifier, Classes of operation, Harmonic distortion, power dissipation, efficiency calculations. Design considerations of transformer coupled and transformer less push-pull audio power amplifiers under Class-A, Class-B, Class-D, Class –AB operations, Qualitative analysis on R.F. Tuned amplifiers.

UNIT – V

Differential Amplifiers: Classification, DC and AC analysis of single/dual input Balanced and unbalanced output Configurations using BJTs. Level Translator.

Operational Amplifier: Op-amp Block Diagram, ideal Op-amp Characteristics, op-amp and its features, Op-Amp parameters & Measurements, Input and Output Offset voltages and currents, Slew Rate, CMRR, PSRR. Frequency Response and Compensation techniques.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER
NETWORKS AND TRANSMISSION LINES

| | | |
|-----------------------------|----------------------|-----------------------------------|
| Instructions: 3Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: EC 2160 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To provide a good insight into the characteristics of symmetrical and asymmetrical networks. Design of various filters and synthesis of networks using RC and RL functions. Properties of transmission lines and impedance matching in the transmission line. | <p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> Analyze and design the four terminal network for different source and load impedances. Synthesize the passive one port network in various forms using transfer function. Characterize the properties of transmission lines at VHF, UHF and able to match impedance using transmission lines. |

UNIT-I

Asymmetrical networks, Image and Iterative impedances. Image transfer constant and iterative transfer constant. Symmetrical networks, characteristic impedance and propagation constant. Properties of L, T and Pi section types.

UNIT-II

Constant K-filters – low pass, high pass, band pass, band elimination filter design, m-derived -- low pass, high pass, band pass, band elimination filter design and composite filter design.

UNIT-III

Network synthesis: Hurwitz polynomials, positive real functions, L-C Imittance functions, RC impedance functions and RL admittance functions. RL impedance functions and RC admittance functions. Cauer and Foster's forms of RL impedance and RC admittance Attenuators and their design. Equalizers and their design. Impedance matching networks. Inverse network elements.

UNIT-IV

Properties of transmission lines. Transmission line equations from source and load end. The finite and infinite lines. Velocity of propagation, input impedance. Open and short circuited lines, telephone cables, distortion less transmission, loading of cables, Campbell's formula.

UNIT-V

Properties of Transmission lines at UHF, Reflection co-efficient, Standing waves and SWR, Distribution of voltages and currents on loss less line. Characteristics of half wave, Quarter-wave and one eighth wave lines. Construction and applications of Smith chart. Transmission line matching. Single and double stub matching.

Suggested Reading:

1. John D. Ryder, Networks, Lines and Fields, PHI, 2nd edition, 2009.
2. M.E. Van Valkenburg, Network Analysis, PHI, 3rd edition, 2009.
3. C.L Wadhwa, *Network Analysis and Synthesis*, New age Internal publishers revised 3rd edition.
4. Roy, Choudhury D., Networks and Systems, New Age International Publishers, 2nd edition, 2010.
5. Smarjit Ghosh, Network Theory : Analysis and Synthesis, PHI, 2009.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER
SIGNAL ANALYSIS AND TRANSFORM TECHNIQUES

| | | |
|-------------------------------|----------------------|------------------------------|
| Instructions: 3+1Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: EC 2170 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To define and classify continuous and discrete time signals & systems and to determine the frequency domain characteristics of signals using various transform techniques and to perform the Convolution and correlation of signals. | <p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> • Understand the concepts of continuous and discrete time signals & systems, and to transform the time domain signal into frequency domain signal using various transform techniques. • Convert a continuous time domain signal to a discrete time domain signal using Sampling. • Perform the convolution and correlation of continuous and discrete time signals. |

UNIT-I

Continuous Time Signals & Systems: Introduction, Elementary signals, Basic operations on signals and its classification. Introduction to systems and its classification. Analogy between vectors and signals - signal representation by a set of mutually orthogonal functions, Evaluation of mean square error, Orthogonality in complex functions.

Fourier Series: Review of Fourier series, Existence and Convergence, Trigonometric and exponential Fourier series representations and their relations, Symmetry conditions, Properties, Complex Fourier spectrum, Power Spectral Density (PSD).

UNIT-II

Signal Representation by Continuous Exponentials: Introduction to Fourier Transform, Existence, Fourier transform of singularity functions and signals, Properties, Fourier transform of a periodic function, Energy Spectral Density (ESD).

Signal Transmission Through Linear Systems: Introduction to Linear Time Invariant (LTI) system, Unit Impulse and step response, Transfer function of an LTI system, Filter characteristics of an LTI system, Distortion less transmission, Signal bandwidth, System bandwidth, Ideal filter characteristics, Causality and Paley-wiener criterion for physical realization.

UNIT-III

Sampling: Introduction to Sampling, Sampling Theorem, Aliasing, Sampling Techniques, Reconstruction.

Signal Representation by Generalized Exponentials: Introduction to Laplace transforms, Existence, Region of convergence (ROC) and its properties. Properties of Laplace transform. Inverse Laplace transform. Analysis and characterization of continuous LTI systems using Laplace Transform.

UNIT-IV

Discrete Time Signals & Systems: Introduction, Elementary signals, Basic operations on signals and its classification. Introduction to systems and its classification. Linear Shift invariant systems, Stability and Causality, Linear constant coefficient systems. Discrete Fourier Series (DFS), Discrete Time Fourier Transform (DTFT).

Z-Transforms: Introduction to Z-Transform, Existence, Region of Convergence (ROC) and its properties. S-plane and Z-plane correspondence, Properties of Z-Transform, Inverse Z-Transform, Analysis and characterization of discrete LTI systems using Z-Transform

UNIT-V

Convolution & Correlation: Continuous convolution - Graphical interpretation and Convolution properties. Discrete convolution- Graphical interpretation and Convolution properties. Continuous Correlation-Cross correlation and Auto correlation, their graphical interpretation and properties. Discrete correlation- Cross correlation and Auto correlation, their graphical interpretation and properties.

Suggested Reading:

1. Signals, Systems & Communications - B.P. Lathi, 2013, BSP.
2. Signals and Systems - A.V. Oppenheim, A.S. Willsky and S.H. Nawab, 2 Ed., PHI.
3. Signals & Systems - Simon Haykin and Van Veen, Wiley, 2 Ed.
4. Signals and Systems – A.Rama Krishna Rao – 2008, TMH.
5. M.J. Robert “Fundamentals of signals and systems”, McGraw Hill, 2008

SYLLABUS FOR BE 2/4 SECOND SEMESTER**

PULSE, DIGITAL AND SWITCHING CIRCUITS

| | | |
|-------------------------------|----------------------|------------------------------|
| Instructions: 3+1Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: EC 2180 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> ▪ To familiarize the students with the concepts of wave shaping using linear & nonlinear circuits, switching characteristics of diodes. ▪ To design & analyze various Multi vibrators. ▪ To understand the concepts of combinational and sequential circuits, analyze and Design the Combinational and sequential systems. | <p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> ▪ Construct different linear wave shaping networks and demonstrate their response. ▪ Analyze switching characteristics of diodes. ▪ Construct various multi vibrators. • Design different combinational and sequential circuits. |

UNIT- I

Wave-Shaping: RC, RL and RLC circuits, response to Step, Pulse, Square, Exponential and Ramp inputs. Integrating and differentiating circuits, Compensated attenuators. Non-linear wave shaping using Diodes and Transistors. Clipping and Clamping circuits, Clamping circuit theorem.

UNIT- II

Multi vibrators: Analysis and design of Transistor Multi vibrators – Bistable, Mono-stable and Astable circuits. Operation of regenerative comparator (Schmitt Trigger). Time base generators: Speed, transmission and displacement errors.

Analysis and Design of sweep circuits using UJT and SCR.

UNIT- III

Boolean – Algebra: Introduction to Boolean Algebra, De Morgan's theorem, Canonical forms and standard forms, Introduction to Logic Gates, Ex-OR, Ex-NOR operations, Simplification of switching functions using theorems, Karnaugh map method, Quine Mc Cluskey /Tabular method. Realization of Logic functions using AND-OR, OR-AND and NAND / NOR.

UNIT - IV

Combinational Logic Design: Binary Adders, Subtractors, Code converters, Decoders and Encoders, Priority Encoder, static and hazard free design. Introduction to Sequential Logic: Types of Flip-Flops, Excitation Tables and Flip-Flop Conversions, Classification of sequential circuits.

UNIT - V

Sequential Logic Design: State Diagram and State Table, Design of synchronous and asynchronous counters, registers.

Finite State Machines: Moore Type and Mealy Type FSM, Design of Sequence Detector using Moore and Mealy FSM. One Hot Encoding.

Suggested Reading:

1. Jacob Millman and Herbert Taub, Pulse, Digital and Switching Waveforms, TMH, 3rd edition, 2011.
2. M. Morris Mano and Michael D. Ciletti, "Digital Design", 4th Edition., Prentice Hall, 2007
3. Zvi Kohavi, Switching and Finite Automata Theory, TMH, 2nd edition, 2001.
4. David A. Bell, Pulse, Switching and Digital Circuits, 5th edition, OXFORD Higher Education, 2015.
5. Stephen Brown and Zvonko Vranesic, Fundamentals of Digital Logic with VHDL Design, TMH, 3rd edition, 2010.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER

ELEMENTS OF MECHANICAL ENGINEERING

| | | |
|-------------------------------|----------------------|------------------------------|
| Instructions: 3+1Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code:ME 2060 |
| Credits: 3 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The course will enable the students to: <ul style="list-style-type: none"> Learn the basic principles of Mechanical Engineering in the areas of Thermodynamics, Heat transfer, Refrigeration, IC Engines, Compressors, Manufacturing and Kinematics of Machines | At the end of the course students will be able to: <ul style="list-style-type: none"> Understand the Thermodynamic laws and their applications. Understand the modes of heat transfer and different types heat exchangers. Understand the principles of refrigeration. Understand the basic manufacturing processes. understand the principles of kinematic links |

UNIT- I

Thermodynamics: Concept of system, process and properties, laws of thermodynamics, concept of entropy and Clausius inequality, steady flow energy equation for an open system.

IC Engines: Working of Four Stroke and Two Stroke Petrol and Diesel Engine with p- V diagrams, Valve timing diagram, Calculation of Indicated power, Brake power, Specific Fuel Consumption, Mechanical and Thermal efficiencies.

Reciprocating Air Compressors: Work done, efficiency of multistage compressors, Effect of clearance volume.

UNIT- II

Heat Transfer: Basic modes of heat transfer, Fourier's law of conduction, Newton's Law of cooling, Stefan- Boltzman Law of radiation and one dimensional steady state conduction heat transfer through plane walls without heat generation.

Heat Exchangers: classification and applications of heat exchangers in industry, derivation of LMTD in parallel and counter- flow heat exchangers and problems.

UNIT- III

Refrigeration: Types of Refrigeration systems-Air Refrigeration system, vapor compression system, ammonia- water absorption refrigeration system, thermoelectric refrigeration system, COP and representation of cycle on T-S and H-S diagrams, Types and properties of refrigerants, eco-friendly refrigerants, Introduction to Psychometry and Psychometry processes.

UNIT- IV

Basic Manufacturing Processes: Welding, Brazing, Soldering, brief description of process and parameters, associated principles of gas welding, arc welding.

Casting: Sand casting, Die casting and principles and applications.

Forming: Basic concepts of forming processes: Extrusion, rod/wire drawing, Forging and Rolling.

Principles and Applications of basic Machine Processes: Turning, Drilling and Shaping.

UNIT- V

Definition of kinematic link and pair, mechanism and machine. **Gears:** Classification of gears, nomenclature, **Gear Trains:** Simple, compound, inverted and epi- cycle gear trains.

Belt and Rope drives: Open and crossed belt drives, Length of belt, Ratio of tensions of flat belt, condition for maximum power transmission for flat belt.

Suggested Reading:

1. RK Rajput, Thermal Engineering, Laxmi Publications, 2005
2. C. Sachdeva, Fundamentals of Engineering heat and mass transfer, Wiley Eastern Ltd., 2004.
3. PN Rao, Manufacturing Technology, Vol. 1 & 2, Tata McGraw hill Publishing Co., 2010.
4. Thomas Bevan, Theory of Machines, CBS Publishers, 1995.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER**

HUMAN VALUES & PROFESSIONAL ETHICS – I

| | | |
|-----------------------------|----------------------|------------------------------|
| Instructions: 2Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: HS2140 |
| Credits: 01 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objectives | Course Outcomes |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The course will enable the students to :-</p> <ul style="list-style-type: none"> • Get a holistic perspective of value-based education. • Grasp the meaning of basic human aspirations vis-a-vis the professional aspirations. • Understand professionalism in harmony with self and society. • Develop ethical human conduct and professional competence. • Enrich their interactions with the world around, both professional and personal. | <p>At the end of this course the student will be able to:</p> <ul style="list-style-type: none"> • Gain a world view of the self, the society and the profession. • Make informed decisions. • Start exploring themselves in relation to others and their work –constantly evolving into better human beings and professionals • Inculcate Human values into their profession. • Validate their aspirations through right understanding of human relationship and see the co-relation between the human values and prevailing problems. • Strike a balance between physical, mental, emotional and spiritual parts their being. • Obtain a holistic vision about value-based education and professional ethics. |

UNIT-I:

The purpose of life-Individual to society to the ideal –individual transformation as a stepping stone to idealism- the flow of transformation from individual to society – An awakened society as a basis to move towards the concept of idealism. How do lifestyles and habits affect the basic behavior? What is the roadmap to a healthy lifestyle and how does it impact the individual, furthermore, how does it enhance the purpose of life.

Philosophy of Life from different cultures–value of life–Objective of life-The Physical, Mental and Emotional aspects of man-Building an integrated personality. Ways and means to accomplish it.

UNIT-II:

Time Management-Why is it essential? Impediments-how best to manage time? Benefits of effective time-management. How to make the best of the present?

UNIT-III:

Positive thinking-The need, nature and scope of positive Thinking-Positive thinking as a foundation to success and building character – Introspection and Self-analysis-identifying the desirable traits-Building of right character. Meaning of values versus skills. Self-worth and Professional worth. Professional Obligations and Competence. Work-life balance.

UNIT-IV:

Different lifestyles and habits- Excellence-Professional & Personal ethics in Society-Goals-Striking a balance between excellence and goals and how to aim for excellence and achieve it with ethics.

UNIT-V:

Potentials and harnessing Potentials-Self-Hidden Potentials-Weeding out Weaknesses-Channelizing the potential. Optimizing potential to achieve goals.

Suggested Reading:

4. Mike Martin and Ronald Schinzinger "Ethics in Engineering "McGraw Hill
5. Charles E Haris, Micheal J Rabins, " Engineering Ethics "Cengage Learning

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER**

FINISHING SCHOOL: COMMUNICATION SKILLS IN ENGLISH-II

| | | |
|----------------------------------|----------------------|--------------------------------|
| Instruction : 4 Periods per week | Sem Exam Marks : 70 | Subject Ref Code : HS2270 |
| Credits : 2 | Sessional Marks : 30 | Duration of Sem Exam : 3 Hours |

| Course Objective | Course Outcome |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. identify the various features and functions of human language and communication. 2. develop the habit of listening effectively so as to analyze the speaker's tone and tenor. 3. choose appropriate words so as to speak and write accurately. 4. read various types of texts and sift information correctly. 5. study organizational structures and behavioral patterns and adapt appropriately. | <ul style="list-style-type: none"> • Participate in group and forum discussions by providing factual information, possible solutions, and examples. • Debate on a topic by picking up the key points from the arguments placed. • Provide logical conclusions to the topics under discussion. • Prepare, present, and analyze reports. • choose appropriate words and tone to present accurate, specific, and factual reports. • Compose a summary of beginning high level reading text that identifies the thesis and key supporting details. • Summarize with 70% comprehension.. • Apply reading skills, including how to approach different types of literature. |

UNIT I: PROFESSIONAL DISCUSSIONS AND DEBATES

Competencies:

- Analytical and Probing Skills
- Interpersonal Skills

Topics Covered:

Discussing
Debating

Topic Level Details

Discussing

Competencies:

- Thinking
- Assimilating

Debating

Competencies:

- Comprehending key points of the debate and note decisive points including supporting details.
- Construct a logical chain of arguments and decisive points.
- Writing a review about a product by providing reasons, causes, and effects

UNIT II: DRAWING CONCLUSIONS

Competencies:

- Reasoning skills - Coherent and logical thinking
- Reporting and Analyzing skills.

Topics Covered:

How to draw conclusions

Importance of Logic

Topic Level Details:

Drawing conclusions

Competencies:

- Analyzing the points discussed.
- Connecting all points without gaps.
- Identifying clinchers.
- Communicating the decisions

UNIT III - REPORTING

Competencies:

- Reporting an incident
- Writing/Presenting a project report

UNIT IV - READING FOR CONTEXT

Competencies

Develop metacognitive strategies

Topics covered

Develop critical reading skills:

- Recognition of author's purpose
- Awareness of stylistic differences
- Discernment of fact and opinion
- Evaluation of fact and opinion
- Recognition of propaganda techniques
- Present vocabulary building methods
- Use comprehension and vocabulary strategies to raise reading rate.

UNIT V- SOFT-SKILLS

1. Professional integrity
2. Managing time
3. Coping with stress
4. Organizational skills

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER

ELECTRONICS CIRCUITS LAB

| | | |
|-----------------------------|----------------------|------------------------------|
| Instructions: 3Periods/Week | Sem Exam Marks : 50 | Subject Ref. Code: EC 2411 |
| Credits: 2 | Sessional Marks : 25 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|---------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To develop an understanding of the underlying concepts of analog electronic circuits ,wave shaping circuits and low pass/high pass filters. | At the end of the course students will be able to: <ul style="list-style-type: none"> • Design different types of clippers, clampers and multi vibrators • Analyze the circuit behavior with and without feedback • Distinguish between symmetrical and asymmetrical networks and also between T and π section filters |

List of Experiments :

1. Frequency response of single stage and two stage RC-Coupled amplifier using BJT.
2. Frequency response of single stage and two stage RC-Coupled amplifier using FET.
3. Clipping and Clamping Circuits
4. Measurement of Image impedance and characteristic impedance
5. Frequency response of Voltage series feedback amplifier
6. Frequency response of Current Shunt feedback amplifier
7. Bistable Multi vibrator, Schmitt trigger
8. Astable Multi vibrator and Voltage to frequency Converter
9. Monostable Multi vibrator
10. Design and verification of constant K- LPF (Frequency response)
11. Design and verification of m-derived- HPF (Frequency response)
12. Design and verification of L type matching network
13. Design of Oscillators: RC Phase Shift , Hartley, Colpitts
14. Design of tuned Amplifier
15. Design of Power amplifiers : Class – A and Class – B

Suggested Reading:

1. Robert Diffenderfer, "Electronic Devices Systems and Applications", Cengage Learning India Private Limited, 2010.
2. Paul B. Zbar, Albert P. Malvino, Michael A. Miller, "Basic Electronics, A Text - Lab Manual", 7thEdition, TMH 2001.

SYLLABUS FOR BE 2/4 SECOND SEMESTER

SIMULATION LAB FOR SIGNALS AND SYSTEMS

| | | |
|-----------------------------|----------------------|------------------------------|
| Instructions: 3Periods/Week | Sem Exam Marks : 50 | Subject Ref. Code: EC 2421 |
| Credits: 2 | Sessional Marks : 25 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To impart the knowledge to write MATLAB codes for the generation of signals, to perform different operations and to verify various transforms for converting time domain signal to frequency domain signal. | At the end of the course students will be able to: <ul style="list-style-type: none"> • Write MATLAB codes for the generation of signals. • Apply various transforms on signals to find it's Spectrum using MATLAB. • Correlate two signals and can remove noise using correlation. • Find the response of the system using convolution function in MATLAB. |

List of Experiments:

1. Basic operations on Matrices
2. Signal Representation.
3. Continuous Systems
4. Convolution Representation
5. Fourier Series
6. The Fourier Transform
7. Mini project-1
8. Frequency domain analysis of Systems
9. Fourier analysis of Discrete time signals and Systems
10. The Laplace transform and the transfer function representation
11. System analysis using the transfer function
12. State space and linear systems
13. Verification of Sampling theorem
14. Correlation between signals and Systems
15. Mini project -2

Suggested Reading:

1. Taan S. ElAli and Mohammad A. Karim, "Continuous Signals and systems with MATLAB", 2/e, 2009, CRC Press.
2. Edward W.Kamen and Bonnie S. Heck, "Fundamentals of Signals and Systems Using MATLAB", PHI Inc.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER**

APPLIED ELECTRONICS (For MECH)

| | | |
|-----------------------------|----------------------|------------------------------|
| Instructions: 4Periods/Week | Sem Exam Marks : 70 | Subject Ref. Code: EC 2280 |
| Credits: 03 | Sessional Marks : 30 | Duration of Sem Exam: 3 Hrs. |

| Course Objective | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> The course enables the students to acquire the knowledge of various electronic devices & their applications. | <p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> Employ different electronic devices to build electronic circuits such as rectifiers, amplifiers, regulators & oscillators. Implement digital circuits such as adder & subtractors using logic gates. Convert real time signals into corresponding electrical signals using transducers. Program 8051 Microcontroller for real-time interfacing applications. |

UNIT - I

Semiconductor theory: Energy levels, Intrinsic and extrinsic semiconductors, Mobility, diffusion and drift current, Hall effect.

Diodes - PN junction diodes, V-I characteristics, dynamic & static resistance, principle of working and V-I characteristics of Zener diode, Working of simple zener voltage regulator, V-I characteristics and applications of SCR and TRIAC. Working and characteristics of UJT.

UNIT - II

Rectifiers & power supplies - block diagram description of a dc power supply, circuit diagram & working of half-wave & full wave rectifier, final equations of V_{rms} , V_{dc} , ripple factor and peak inverse voltage in each case. Principle of working of series inductor and shunt capacitor filters. Photoelectric devices-principle of operations of Photodiode, Phototransistor, Photovoltaic cell, Solar cell & LED.

UNIT - III

Bipolar junction transistors: NPN & PNP transistors, structure, typical doping, working of NPN & PNP transistors. Concepts of common base, common emitter & common collector configurations. Comparison of three configurations with reference to voltage & current gains, input & output resistances and applications.

Amplifiers & Oscillators: Circuit diagram & working of common emitter amplifier, function of each component in the circuit, need of proper biasing, frequency response, voltage gain and 3dB bandwidth. Concepts of feedback, working principles of oscillators, circuit diagram & working of RC, LC and Crystal oscillators.

UNIT - IV

Integrated circuits: Advantages of ICs, Analog and Digital ICs. Functional block diagram of operational amplifier, ideal operational amplifier, Inverting amplifier, Non inverting amplifier, Summing Amplifier, Differentiator, Integrator and Comparator.

Digital ICs: Boolean Algebra, Logic gates, realization of logic functions. Principle of combinational and sequential logic circuits, Flip-flops.

UNIT - V

Transducers - Resistive and Capacitive transducers, Strain Guage, Thermistor, LVDT.

Micro controllers - Intel 8051 - Architecture, Memory organization, Register banks, Special function registers, Addressing modes. Instruction set of 8051 - Programming examples (addition, subtraction, 8 bit multiplication and 8 bit division, only), Interfacing of 8051 with DC and Stepper motor.

Suggested Reading:

- Jacob Millman, Christos C. Halkias and Satyabrata Jit, Electronics Devices and Circuits, Mc Graw Hill, 3/e., 2010.

| Course Objective: | Course Outcomes |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To familiarize the students with design and working of various amplifiers and oscillators and analyze concepts of linear and non-linear circuits. | <p>At the end of the course students will be able to:</p> <ul style="list-style-type: none"> Analyze and design various feedback amplifiers and large signal amplifiers. Design a sinusoidal oscillator. Analyze drift compensation techniques and differential amplifiers. Design and analyze linear and non-linear wave shaping circuits. |

UNIT – I

Feedback amplifiers: Concept of feedback, feedback amplifier configurations, circuits, Advantages of negative feedback, analysis of simple feedback amplifiers using BJTs and FETs.

UNIT – II

Oscillators: Barkhausen criterion, RC phase shift oscillator, Wein bridge oscillator, LC oscillators: Hartley and Colpitts, Crystal controlled oscillator (analysis of oscillators using only BJTs), Stability of oscillator

UNIT – III

DC amplifiers: Problems of dc amplifiers, Drift compensation techniques, Differential amplifiers, importance of CMRR, High CMRR differential amplifier.

UNIT – IV

Power amplifiers: Classification of Power amplifiers, analysis of class A and class B power amplifiers, Distortion in amplifiers, push pull amplifiers, complementary symmetry power amplifiers

UNIT – V

Wave shaping circuits: RC low pass and high pass circuits: response to step, pulse, ramp and square inputs, Differentiating and integrating circuits, Clipping circuits for single level and two level using diode, Clamping circuits.

Suggested Reading:

1. Jacob Millman, Christos C.Halkias, and Chetan Parikh, "Integrated Electronics", 2nd Edition, McGraw Hill Publication, 2009

13. Arithmetic operations (8 bit) using 8051 Microcontroller
14. Interfacing applications using 8051 Microcontroller

General Note:

1. There should not be more than 2 students per batch while performing any of the lab experiment.
 - ii. Mini Project cum design exercise:
 - (a)The students must design, rig-up, and test the circuits wherever possible and should carry out the experiments individually.
 This exercise carries sessional marks of 10 out of 25, while the remaining 15 marks are for the remaining lab exercises.

**DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
SYLLABUS FOR BE 2/4 SECOND SEMESTER**

ELECTRONICS ENGINEERING – II LAB (For EEE)

| | | |
|-----------------------------|----------------------|------------------------------|
| Instructions: 3Periods/Week | Sem Exam Marks : 50 | Subject Ref. Code: EC2501 |
| Credits: 02 | Sessional Marks : 25 | Duration of Sem Exam: 3 Hrs. |

| Course Objective: | Course Outcomes |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To develop an understanding of the underlying concepts of analog electronic circuits including feedback amplifiers, power amplifiers & oscillators, and design linear wave shaping and non-linear wave shaping circuits. | At the end of the course students will be able to: <ul style="list-style-type: none"> Analyze the small signal amplifiers behavior with and without feedback Design and verify the functioning of various sinusoidal oscillators Examine the characteristics of a difference amplifier Design different types of clippers and clampers |

List of Experiments:

1. Frequency response of Voltage series feedback amplifier
2. Frequency response of Voltage Shunt feedback amplifier
3. Frequency response of Current series feedback amplifier
4. Frequency response of Current Shunt feedback amplifier
5. Design of Hartley Oscillator
6. Design of Colpitt's Oscillator
7. Design of RC Phase Shift
8. Difference amplifier(Op-Amp)
9. Transformer coupled Class A power amplifier
10. Class B Power amplifier
11. Linear wave shaping-Integrator & Differentiator
12. Clipping circuits
13. Clamping Circuits

Suggested Reading:

1. Paul B. Zbar, Albert P. Malvino, Michael A. Miller, "Basic Electronics, A Text - Lab Manual", 7thEdition, TMH 2001.
2. Paul B. Zbar, Industrial Electronics, A Text-Lab Manual, 3rd Edition, TMH 1983.

No credits will be awarded to the bridge courses offered at 2/4 B.E (all branches) lateral entry students admitted from the academic year 2015-16 under autonomous status. However pass in each of these courses is mandatory to obtain the degree. Every student shall get 40% marks in each course for a pass in theory subject and 50% marks in laboratory course. Only semester examinations will be conducted at the end of each semester. The marks/Grades obtained by the student in this course **will not be added in computing the SGPA/CGPA**

DEPARTMENT OF CIVIL ENGINEERING
 SYLLABUS FOR BRIDGE COURSE BE 2/4 - FIRST SEMESTER (All branches)
 ENGINEERING MECHANICS

|---------------------------------|-----------------------------------------|
| Instruction : 2 periods week | Subject Reference Code: CE2080 |
| Semester Exam Marks : 50 | Duration of Semester Exam: 3 Hrs |

| COURSE OBJECTIVES | COURSE OUTCOMES |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ol style="list-style-type: none"> To learn the resolution of a system of spatial forces. To assess the frictional forces on rigid body. To understand the concepts of dynamics and its principles. To explain kinetics and kinematics of particles, projectiles, curvilinear motion and centroidal motion. To impart the concepts of work-energy method and its applications to rectilinear translation, centroidal motion. | <p>students will be able to:</p> <ol style="list-style-type: none"> Judge whether the body under the action of spatial force system. Solve problem of bodies subjected to friction. Distinguish between statics and dynamics and differentiate between kinematics and kinetics. Understand the kinetics and kinematics of a body undergoing rectilinear, curvilinear, rotatory motion and rigid body motion. Know the concepts of work and energy principles subject and derive the work energy equations for translation, rotation and connected systems. |

UNIT-I (3 periods)

Force Systems: Components of forces, moments in space and its applications.

UNIT-II (4 periods) :

Friction: Laws of friction. Application to simple systems and wedge friction.

UNIT-III (5 periods) :

Kinematics: Rectilinear motion, Curvilinear motion, Velocity and acceleration of a particle.

UNIT-IV (6 periods) :

Kinetics: Analysis as a particle. Analysis as a rigid body in translation. Fixed axis rotation and Rolling bodies.

UNIT-V (5 periods) :

Work Energy: Principles of work-energy, and its application to translation, Particle motion and connected systems.

Learning Resource:

1. F.L.Singer, "Engineering Mechanics", Harpper & Collins, Singapore 1994.
2. S.P.Timoshenko and D.H.Young, "Engineering Mechanics", McGraw Hill International Edition, 1983
3. Andrew Pytel., Jaan Kiusalaas., "Engineering Mechanics", Cengage Learning, 2014.
4. F.P.Beer & E.R.Johnston, "Jr. Vector Mechanics for Engineers", TMH, 2004.
5. R.C.Hibbeler & Ashok Gupta, "Engineering Mechanics", Pearson Education, 2010.
6. Tayal A.K., "Engineering Mechanics – Statics & Dynamics", Umesh Publications, 2011.
7. Basudeb Bhattacharyya., "Engineering Mechanics", Oxford University Press, 2008.
8. Meriam. J. L., "Engineering Mechanics", Volume-I Statics, John Wiley & Sons, 2008.
9. NPTEL Course and Virtual labs on the web.

w.e.f. the academic year 2015-16

DEPARTMENT OF MATHEMATICS
SYLLABUS FOR BRIDGE COURSE BE 2/4 - FIRST SEMESTER (for All branches)
MATHEMATICS

| | |
|---------------------------------|------------------------------------------|
| Instruction :1 period week | Subject Reference Code: MA2040 |
| Semester Exam Marks : 25 | Duration of Semester Exam: 90 Min |

Unit -I (6 Periods):

Basics of Statistics & Probability: Measure of central tendency (Mean, Median & Mode) - Definition of Probability - Addition & Multiplication theorem - Discrete random variable

Unit – II (6 Periods):

Integral Calculus: Methods of integration- Multiple Integrals -Applications of Integration - areas - Surface areas - Volume of solid of revolution

LEARNING RESOURCES:

1. B.S. Grewal , Higher Engineering Mathematics.
2. Gupta & Kapoor, Fundamentals of Mathematical Statistics
3. Shantinarayana Integral calculus

DEPARTMENT OF PHYSICS

SYLLABUS FOR BRIDGE COURSE BE 2/4 - FIRST SEMESTER (All branches)
PHYSICS OF MATERIALS

| | |
|---------------------------------|------------------------------------------|
| Instruction :1 period week | Subject Reference Code: PH2130 |
| Semester Exam Marks : 25 | Duration of Semester Exam: 90 Min |

| Course objectives | Course Outcomes <i>Student should be able</i> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> • To apply basic principles of physics in field of engineering • Analyze the characteristics of semiconductor devices • To take up research at Undergraduate Level in new and emerging areas like materials science including magnetic dielectrics and nanotechnology | <ul style="list-style-type: none"> • Differentiate properties, characteristics and applications of various materials like magnetic, dielectric and semiconducting materials • Inquire the new trends in interdisciplinary research area such as Magnetic materials, dielectric materials Semiconductors and nanotechnology |

UNIT -I**1. Dielectric Materials: (3 periods)**

Polar and Non polar dielectrics-Different types of polarizations in dielectrics- Ferro-electric materials: properties and applications.

2. Magnetic Materials: (3 periods)

Ferro, Ferri and anti ferro magnetic materials and their properties, Domain theory of ferromagnetism- Hysteresis (B-H) curve-soft and hard magnetic materials

UNIT – II:**1. Semiconductor Devices: (3 periods)**

Fermi energy in semiconductor- Intrinsic carrier concentration of semiconductor-Characteristics of Photo diode and solar cell

2. Nano Materials: (3 periods)

Distinction between Bulk, thin and nano material-Surface to volume ratio-Quantum confinement-Basic properties of nano-materials, Applications of Nano materials and CNT's.

LEARNING RESOURCES:

1. Kittel C, Introduction to Solid State Physics, Wiley Eastern
2. Avadhanulu & Kshirasagar, A Text book of Engineering Physics
3. Neeraj Mehta , Applied Physics for Engineers, , PHI
4. N Chattopadhyay, K. K.Banerjee-Introduction to Nanoscience and Nanotechnology, PHI

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

| Students should be able to | Students will be able to |
| <ul style="list-style-type: none"> understand the fundamentals of programming in C Language write, compile and debug programs in C formulate problems and implement in C effectively choose programming components to solve computing problems | <ul style="list-style-type: none"> draw flowcharts and write algorithms for a given problem choose appropriate data types for writing programs in C language design programs involving input output operations, decision making and looping constructs design modular programs |

- Finding roots of quadratic equation
- Check whether a given number is (i) Prime (ii) Perfect (iii) Am Strong
- Sin x and Cos x values using series expansion.
- Menu driven program to calculate income tax
- Generating Pascal's Triangle
- Frequency of occurrence of characters and special characters like \n, \t, white spaces.
- Bubble sort, Selection sort using arrays
- Linear search and Binary Search.
- Functions to find maximum and minimum of given set of numbers, interchange two numbers
- Recursion: Factorial, Fibonacci, GCD of given numbers
- Functions for string manipulations without using library functions
- String comparisons and sorting using pointers to strings.
- Matrix addition and multiplication using pointers
- Programs on Structures and Unions
- File handling programs, Finding the no: of characters, words and lines of given text file.
- Mini Project:** Simple application using the concepts of C language

Learning Resources:

- B.A.Forouzan & Richard F.Gilberg, *A Structured Programming Approach using C*, 3rd Edition, Cengage Learning, 2013
- Brian W. Kernighan and Dennis M. Ritchie, *The C Programming Language 2nd Edition*, Prentice-Hall, 2006
- E.Balagurusamy, *Programming in ANSI C*, TMG, 4th Edition, 2008.

DEPARTMENT OF HUMANITIES AND SOCIAL SCIENCES (for All branches)
SYLLABUS FOR BRIDGE COURSE BE 2/4 – SECOND SEMESTER

ELT-LAB

| | |
|---------------------------------|---------------------------------------|
| Instruction :2 periods week | Subject Reference Code: HS2231 |
| Semester Exam Marks : 50 | Duration of Semester Exam: 2hrs |

| Course objectives | Course Outcomes |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> Use language effectively without mother tongue influence. Converse in various situations. Make paper and power point presentations. Listen to audio clippings, exchange dialogues and write short texts. Speak effectively using discourse markers. Read and understand various forms of texts and review them. | <ul style="list-style-type: none"> Pronounce words in isolation as well as in spoken discourse. Research and sift information to make presentations. Comprehend the tone and tenor of various types of speeches from media and classroom lectures. Listen for gist and make inferences from various speeches. Identify connectives and transitions in various speeches. Use connectives and make transitions effectively while speaking |

PHONETICS LAB- TOPICS

- Introduction to English Phonetics:** Introduction to auditory, acoustic and articulatory phonetics. Organs of speech: the respiratory, articulatory and phonatory systems
- Sound System of English:** Phonetic sounds, Introduction to International Phonetic Alphabet, Classification and Description of English Phonemic sounds; Minimal pairs: The Syllable: Types of syllables; Difficulties of Indian speakers with sound of English.
- Rhythm and Intonation:** Introduction to rhythm and intonation; Major patterns of intonation in English with their semantic implications; difficulties of Indian speakers with sound of English.

INTERACTIVE COMMUNICATION SKILLS LAB-TOPICS

- Group discussion:** Objectives of GD, Types of GDs; Initiating, Continuing, and concluding a GD.
- Debate:** Understanding the differences between a debate and a group discussion, essentials of debate, concluding a debate.
- Presentation Skills:** Making Effective Presentations, Expressions which can be used in Presentations, Use of Non-Verbal Communication, Coping with Stage Fright, Handling Question and Answer Session; Use of Audio-Visual Aids, PowerPoint Presentations.
- Public Speaking:** Advantages of public speaking, essentials of an effective speech, types of delivery, rehearsal techniques, planning and delivering a speech.
