VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS)

ACCREDITED BY NAAC WITH 'A++' GRADE Ibrahimbagh, Hyderabad-31

Approved by A.I.C.T.E., New Delhi and Affiliated to Osmania University, Hyderabad-07

Sponsored by VASAVI ACADEMY OF EDUCATION Hyderabad

SCHEME OF INSTRUCTION AND SYLLABI UNDER CBCS FOR B.E. (CSE)III and IV Semesters With effect from 2024-25 (For the batch admitted in 2023-24)

(R-23)

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING Phones: +91-40-23146020, 23146021 Fax: +91-40-23146090

## Institute Vision

Striving for a symbiosis of technological excellence and human values

### Institute Mission

To arm young brains with competitive technology and nurture holistic development of the individuals for a better tomorrow

### **Department Vision**

To be a center for academic excellence in the field of Computer Science and Engineering education to enable graduates to be ethical and competent professionals

## **Department Mission**

To enable students to develop logic and problem solving approach that will help build their careers in the innovative field of computing and provide creative solutions for the benefit of society.

#### B.E (CSE) Program Educational Objectives (PEO's)

Graduates should be able to utilize the knowledge gained from their academic program to:

PEO I	Solve problems in a modern technological society as valuable and productive engineers.
PEO II	Function and communicate effectively, both individually and within multidisciplinary teams.
PEO III	Be sensitive to the consequences of their work, both ethically and professionally, for productive professional careers.
PEO IV	Continue the process of life-long learning.

	B.E. (CSE) PROGRAM OUTCOMES (PO's)						
Engir	neering Graduates will be able to:						
P01	Engineering Knowledge: Apply the knowledge of mathematics, science,						
	engineering fundamentals, and an engineering specialization to the solution of						
	complex engineering problems.						
PO2	Problem Analysis: Identify, formulate, review research literature, and analyze						
	complex engineering problems reaching substantiated conclusions using first						
	principles of mathematics, natural sciences, and engineering sciences.						
PO3	Design/development of solutions: Design solutions for complex						
	engineering problems and design system components or processes that meet						
	the specified needs with appropriate consideration for the public health and						
	safety, and the cultural, societal, and environmental considerations.						
PO4	Conduct investigations of complex problems: Use research based						
	knowledge and research methods including design of experiments, analysis and						
	interpretation of data, and synthesis of the information to provide valid						
DOF	conclusions.						
P05	Modern tool usage: Create, select, and apply appropriate techniques,						
	resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the						
	limitations.						
P06	The engineer and society: Apply reasoning informed by the contextual						
PUO	knowledge to assess societal, health, safety, legal and cultural issues and the						
	consequent responsibilities relevant to the professional engineering practice.						
P07	<b>Environment and sustainability:</b> Understand the impact of the professional						
	engineering solutions in societal and environmental contexts, and demonstrate						
	the knowledge of, and need for sustainable development.						
PO8	Ethics: Apply ethical principles and commit to professional ethics and						
	responsibilities and norms of the engineering practice.						
P09	Individual and team work: Function effectively as an individual, and as a						
	member or leader in diverse teams, and in multidisciplinary settings.						
P10	<b>Communication:</b> Communicate effectively on complex engineering activities						
	with the engineering community and with society at large, such as, being able						
	to comprehend and write effective reports and design documentation, make						
	effective presentations, and give and receive clear instructions.						
P11	Project management and finance: Demonstrate knowledge and						
	understanding of the engineering and management principles and apply these						
	to one's own work, as a member and leader in a team, to manage projects and						
L	in multidisciplinary environments.						
P12	Lifelong learning: Recognize the need for, and have the preparation and						
	ability to engage in independent and lifelong learning in the broadest context of						
	technological change.						

	B.E (CSE) PROGRAM SPECIFIC OUTCOMES (PSO's)
PSO I	Graduates will have knowledge of programming and designing to develop solutions for engineering problems.
PSO II	Graduates will be able to demonstrate an understanding of system architecture, information management and networking.
PSO III	Graduates will possess knowledge of computer science and engineering in the areas of Cloud Computing & Data Analytics and apply them in appropriate domains.

#### VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS) SCHEME OF INSTRUCTION AND EXAMINATION(R-23) FOR B.E 2023-24 ADMITTED BATCH III SEMESTER (A.Y 2024-25)

### MICROPROCESSORS, MICROCONTROLLER & INTERFACING SYLLABUS FOR B.E. III-SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks : 60	Course Code: UI23PC310CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
1	Explain the architecture of 8086 microprocessor, 8051 microcontroller and ARM processor	1 Explain the architecture, addressing modes and instruction set of 8086 microprocessor
2	Write assembly language programs to interface I/O devices with processor and controller	<ol> <li>Explain interrupt handling mechanisms of 8086 microprocessor</li> <li>Interface analog and digital I/O devices with8086 microprocessor</li> <li>Write assembly language programs using instruction set of 8051 and ARM controller</li> </ol>
		5 Write programs to interface 8051 microcontroller with I/O devices such as keyboard and stepper motor

#### UNIT-I:

**Microprocessor:** Introduction, Overview of Micro computer structure and Operation, Microprocessor Evolution and Types, 8086 Internal Architecture, Pin Configuration, Minimum and Maximum mode, addressing modes, Instruction set, Programming the 8086, Accessing Data in Memory.

**UNIT-II:** Implementing standard program structures in 8086, Strings, Procedures and Macros, Assembler directives, Interrupts and Interrupt Applications, Hardware and software interrupt applications, Interrupt examples.

#### UNIT-III:

**Digital Interfacing:** Programmable Parallel Ports and Handshake Input/Output, Programmable Peripheral Interface (8255A), Programmable Communication Interface (8251A), Keyboard and display Controller (8279) Interfacing, Programmable Interrupt Controller(8259), Interfacing to Alpha Numeric Displays, Interfacing LCD displays.

Analog Interfacing – A/D & D/A interfacing, DMA Controller(8257).

**UNIT-IV:** Introduction to Microcontrollers, 8051 Architecture, Instruction set, Addressing modes and Programming techniques. Comparison of various families of 8-bit micro controllers, System Design Techniques.

**UNIT-V:** Interfacing of LCD, ADC, Sensors, Stepper motor, keyboard and DAC using 8051 microcontrollers.

**ARM Processor:** Introduction, Processor and Memory Organization, Data Operations, Flow of Control, NodeMCU (Node MicroController Unit)

**Case studies:** Case study on Home protection system, Case study on closed loop DC motor speed control system.

#### Learning Resources:

- 1. Douglas V. Hall, Microprocessors and Interfacing, 2ndEdition (2006), McGraw Hill.
- 2. Kenneth J. Ayala, The 8051 Microcontroller Architecture, Programming and Application, Penram International (2007)
- 3. Marilyn Wolf, Computers as Components: Principles of Embedded Computing System Design, 3rd Edition (2012), Elsevier Morgan Kauffmann Publishers.
- 4. Yu-cheng Liu, Glenn A. Gibson, Microcomputer Systems The 8086/8088 Family - Architecture, Programming and Design 2ndEdition (2011)

#### DATA STRUCTURES

SYLLABUS FOR B.E. III-SEMESTER

L:T:P (Hrs./week):3:0:0	SEE Marks: 60	Course Code: UI23PC320CS
Credits : 3	CIE Marks :40	Duration of SEE : 3 Hours

COURSE OBJECTIVES			<b>COURSE OUTCOMES</b> On completion of the course, students will be able to		
1	Identify and use appropriate data structure for a given problem with effective utilization of space and time.		Compute time and space complexities of Algorithms. Design a solution to a given problem using arrays.		
2	Describe the linear and nonlinear data structures.		Develop applications using stacks, queues and linked lists.		
3			Choose the appropriate nonlinear data structure and perform operations on them.		
			Choose suitable sorting technique to maximize the performance of the solution. Select the hashing technique to perform dictionary operations.		
			Explain operations on Efficient Binary Search Trees and Multiway Search Trees.		

#### UNIT-I:

**Basic concepts:** Algorithm Specification- Introduction, Recursive algorithms, Data Abstraction, Performance analysis- time complexity and space complexity, Asymptotic Notation-Big O, Omega and Theta notations. **Arrays:** Arrays - ADT, Polynomials, Sparse matrices, Strings-ADT, Pattern Matching.

#### UNIT-II:

**Stacks and Queues:** Stacks, Stacks using dynamic arrays, Queues, Circular Queues using dynamic arrays, A Mazing Problem, Evaluation of Expressions – Evaluating Postfix Expression, Infix to Postfix.

**Linked Lists:** Singly Linked Lists and Chains, Linked Stacks and Queues, Polynomials, Operations for Circularly linked lists, Equivalence Classes, Sparse matrices, Doubly Linked Lists.

#### UNIT-III:

**Trees:** Introduction, Binary Trees, Binary Tree Traversals, Heaps, Binary Search trees (BST): Definition, Searching a BST, Insertion into a BST, Deletion from a BST.

**Graphs:** The Graph ADT, Elementary graph operations, Minimum Cost Spanning Trees- Kruskal's Algorithm, Prim's Algorithm.

#### UNIT-IV:

**Sorting:** Insertion Sort, Quick sort, Merge sort, Heap sort, Sorting on Several Keys, List and Table Sorts.

Hashing : Introduction, Static Hashing: Hash tables, Hash functions, Overflow handling.

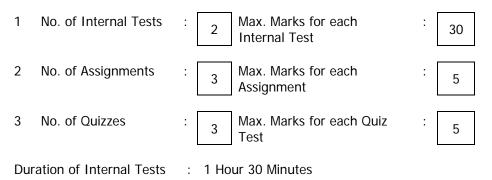

#### UNIT-V:

Efficient Binary Search Trees: AVL Trees, Red-Black Trees, Splay Trees. Multiway Search Trees: m-way search trees-Definition and properties, Searching an m-way search tree, B-Trees-Definition and properties, Number of Elements in a B-Tree, Insertion into a B-Tree and Deletion from a B-Tree. Trie Data Structure: Introduction, Basic Operations.

#### Learning Resources:

#### **Department of Computer Science & Engineering**

#### **OBJECT ORIENTED PROGRAMMING**

SYLLABUS FOR B.E. III-SEMESTER

L:T:P(Hrs./week): 3:0:0	SEE Marks:60	Course Code: UI23PC330CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
<ol> <li>Apply object oriented principles to develop applications using Java constructs.</li> </ol>	<ol> <li>Apply object oriented programming concepts to solve a problem</li> <li>Employ exception handling, concurrent programming practices to develop a parallel processing application</li> <li>Perform I/O operations to develop an interactive Java application.</li> <li>Design a Java utility using the collection framework</li> <li>Apply functional programming constructs and understand a large scale project development architecture style.</li> </ol>

#### UNIT-I:

**Object Oriented System Development:** Understanding Object Oriented Development, Understanding Object Concepts, Benefits of Object Oriented Development.

**Java Programming Fundamentals:** Introduction, Overview of Java, JVM Architecture, Data types, Variables and Arrays, Operators, Control Statements, Classes and Methods, Garbage Collection, this keyword, final, Inheritance, Method Overriding.

#### UNIT-II:

**Classes and Interfaces:** Singleton class, Abstract class, Nested class, Interface, Package.

**Exception Handling:** Introduction, types of exceptions, syntax of exception handling code, multiple catch statements, using finally statement, user-defined exceptions.

**Multithreaded Programming:** Introduction to threads, creating threads, extending the Thread class, implementing the Runnable interface, life cycle of a thread, priority of a thread, synchronization, and Inter-thread Communication, Deadlock.

#### UNIT-III:

**StringHandling**: String, StringBuffer and StringBuilder

**Java.lang:** Type Wrapper, Process, Runtime, Object class, Generics **IO:**Java I/O Classes and Interfaces, Files and Directories, Byte and Character Streams, Serialization.

#### UNIT-IV: Collections:

**Introduction to Collection**: Interfaces, Collection Classes, Iterators, List, Set, Maps, Comparator, Arrays.

**Legacy Classes** and Interfaces, StringTokenizer, BitSet, Date, Calendar, Random, Flow, Timer.

#### UNIT-V:

Lambda expressions: Expressions, Functions, lambda as argument Stream API: Basics, Filter, Sort, Map, Collect Regular Expressions: Pattern, Matcher, Regular expression Syntax JAVA Beans: Architecture

#### Learning Resources:

SYLLABUS FOR B.E. III-SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks : 60	Course Code: UI23PC340CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

Course Objectives	Course Outcomes
Students should be able to	At the end of the course, students will be
	able to
1. Learn the structure and	1. Analyze the major components of a
behavior of various functional	computer and design basic hardware for
modules of a computer and	functional modules of digital computer.
identify how they interact to	2. Analyze micro programmed control unit
provide the processing needs	for designing a digital computer.
of the user.	3. Apply pipeline concepts to increase
2. Understand memory hierarchy	computational speed of CPU and analyze
and analyze different ways of	the flow of data and instructions in the
communicating with I/O of	CPU operations.
digital computer.	4. Analyze techniques used by a computer
	to communicate with I/O devices.
	5. Evaluate the memory organization
	techniques and assess the performance
	of a CPU.

#### UNIT-I

**Overview of Computer Function and Interconnection:** Computer Components, Interconnection Structures, Bus Interconnection, Bus Structure, Data Transfer.

**Register Transfer Micro operations:** Register Transfer Language, Register Transfer, Bus and Memory Transfers, Arithmetic, Logic, Shift Micro operations, Arithmetic Logic Shift Unit.

#### UNIT-II

**Basic Computer organization and Design:** Instruction codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory Reference Instruction, Input-Output and Interrupt.

**Micro programmed Control:** Control memory, Address Sequencing, Micro program Example, Design of Control Unit.

### UNIT-III

**Central Processing Unit:** General Register organization, Stack Organization, Instruction Formats, Addressing Modes, Data Transfer and Manipulation, Program Control, RISC.

**Pipeline:** Parallel processing, Pipelining, Arithmetic pipeline, Instruction Pipeline.

**Computer Arithmetic:** Addition and Subtraction, Multiplication, Division, Floating Point Arithmetic Operations.

### UNIT-IV

**Input-Output organization:** Peripheral Devices, Input-Output Interface, Asynchronous Data Transfer, Modes of Transfer, Priority Interrupt, Direct Memory Access, Input-Output Processor (IOP).

### UNIT-V

**Memory Organization:** Memory Hierarchy, Main Memory, RAM and ROM, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory, Memory Management Hardware.

**Assessing and Understanding Performance:** CPU Performance and its Factors, Evaluating Performance.

Credits :3	CIE Marks :40	Duration of SEE : 3 Hours

			COURSE OUTCOMES
	COURSE OBJECTIVES		completion of the course, idents will be able to
1.	Study the concept of Fourier	1.	Compute Fourier coefficients and
	series and its applications.		find Fourier series of a function.
2.	Understand the concepts of	2.	<b>Evaluate</b> Fourier transform,
	Fourier Transforms, Inverse		Fourier sine and cosine transform,
	Fourier Transform, and		inverse Fourier Sine and Cosine
	properties of Fourier		transform of a function.
	Transform.	3.	Differentiate between discrete
3.	Understand random		and continuous random variables
	variables and its probability		and apply various probability
	distributions		distributions to solve practical
4.	Study the concept of		problems
	hypothesis testing employed	4.	Formulate Null and Alternative
	for small samples.		Hypotheses and apply the tests of
5.	<b>Understand</b> the principles of		hypothesis for small samples.
	curve fitting using the	5.	Apply the method of least
	method of least squares and		squares to fit various curves to
	the concept of correlation.		the given data and Calculate Karl
			Pearson's coefficient of
			correlation.

### UNIT -I (08 Hours)

**Fourier series:** Introduction to Fourier series – Conditions for a Fourier expansion – Functions having points of discontinuity – Change of Interval - Fourier series expansions of even and odd functions - Fourier Expansion of Half- range Sine and Cosine series.

### UNIT-II (08 Hours)

**Fourier Transforms:** Fourier Integral Theorem (without Proof) - Fourier Transforms – Inverse Fourier Transform - Properties of Fourier Transform – Fourier Cosine & Sine Transforms.

### UNIT-III (08 Hours) Probability Distribution:

Random Variables - Discrete and Continuous Random Variables – Mass and density functions – Distribution functions - Definitions of Mean, Median, Mode and Variance – Continuous Distributions - Normal Distribution – Properties - Standard Normal variate.

# UNIT-IV (10 Hours)

### Test of Hypothesis

Introduction -Testing of Hypothesis- Null and Alternative Hypothesis -Errors--Level of Significance-Confidence Intervals -Tests of Significance for small samples - t-test for single mean - F- test for comparison of variances - Chi-square test for goodness of fit.

### UNIT-V (08 Hours) Curve Fitting:

Curve fitting by the Method of Least Squares - Fitting of Straight Line-Second order curve (parabola) - Exponential curves- Correlation – Karl Pearson's Co-efficient of Correlation.

#### GREEN BUILDINGS (Open Elective-I) SYLLABUS FOR B.E. III-SEMESTER

L : T : P (Hrs./week):2:0:0SEE Marks:60Course Code: U23OE310CECredits: 2CIE Marks:40Duration of SEE: 3 Hrs

COURSE OBJECTIVES	COURSE OUTCOMES		
Objectives of this course are to:	Upon the completion of this course		
	the students will be expected to:		
1. Learn the principles of planning	1. Explain the principles of		
and orientation of buildings.	building planning, its bylaws		
2. Environmental implications of	and provide facilities for		
natural and building materials	rainwater harvesting.		
along with green cover	2. Analyse the aspects of		
3. Acquire knowledge on various	energy, water and waste		
aspects of green buildings	management in buildings.		
	3. Understand the concepts of		
	green building technologies.		
	4. Understand rating systems of		
	GRIHA IGBC and LEED.		

**UNIT-I: Planning of buildings:** Principles of planning, Relevant building bylaws, site selection for buildings, orientation of buildings, Provision of rain water harvesting

**UNIT-II: Building-Energy-Implications:** Environmental implications of buildings energy, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. Green building materials and recycling, Green cover and built environment

**UNIT-III: Green Building Technologies:** Introduction- Necessity - Concept of Green building. Principles of green building – Site selection criteria for Green Buildings – effective cooling and heating systems – effective electrical systems-Passive solar architecture - effective water conservation systems

**UNIT-IV: Certification Systems:** Certification systems- Green Rating for Integrated Habitat Assessment (GRIHA), Indian Green Building Council (IGBC) and Leadership in Energy and Environmental Design (LEED), case studies

#### DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

## Mathematical Programming for Engineers (General Pool: Open Elective - I)

SYLLABUS FOR B.E. III - SEMESTER (Civil, CSE, AI&ML, EEE, IT, Mechanical)

L:T:P (Hrs./week) : 2:0:0	SEE Marks : 60	Course Code: U23OE310EC
Credits : 2	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES		
To provide fundamental knowledge of programming language for solving problems.	<ul> <li>On completion of the course, students will be able to</li> <li>1. Generate arrays and matrices for numerical problems solving.</li> <li>2. Represent data and solution in graphical display.</li> <li>3. Write scripts and functions to easily execute series of tasks in problem solving.</li> <li>4. Use arrays, matrices and functions in Engineering applications</li> </ul>		

#### UNIT - I : Introduction:

Basics of MATLAB, MATLAB windows, Advantages of MATLAB, on-line help, file types.

**MATLAB Basics:** Variables and Constants –Vectors and Matrices- Arrays - manipulation- Built-in MATLAB Functions. Creating and printing simple plots, Creating, Saving and Executing a Script File, Creating and Executing a function file.

**Programming Basics:** Data types-Operators – Hierarchy of operations, Relational and logical operators, if-end structure, if-else-end structure, ifelseif-else-end structure, switch-case statement, for-end loop, while-end loop, break and continue commands.

#### UNIT - II : Scripts and Functions

Script Files, Function Files, Debugging methods in MATLAB.

**Graphics: Basic 2D plots:** Printing labels- grid and axes box- Entering text in a box- Axis control-Style options-Multiple plots-subplots-specialized 2D plots: stem-,bar, hist, pi, stairs, loglog, semilog, polar, comet 3D plots: Mesh, Contour, Surf, Stem3, ezplot.

### UNIT - III : Numerical Methods Using MATLAB

Numerical Differentiation, Numerical integration- Newton-Cotes integration formulae, Multi-step application of Trapezoidal rule, MATLAB functions for integration.

**Linear Equations-** Linear algebra in MATLAB, Solving a linear system, Gauss Elimination, Finding eigen values and eigen vectors, Matrix factorizations.

#### **UNIT - IV : Nonlinear Equations**

System of Non-linear equations, Solving System of Equations Using MATLAB function fsolve, Interpolation-Lagrange Interpolation, Two dimensional Interpolation.

**Solution of Ordinary differential Equations (ODEs)**-ODE Solvers in MATLAB, Solving First-order equations using ODE23 and ODE45.

### Learning Resources:

- 1. Getting started with MATLAB "A quick introduction for scientist and engineers by Rudra Pratap, Oxford publications.
- 2. Advanced Guide to MATLAB-Practical Examples in Science and Engineering by S.N.Alam, S.Islam, S.K. Patel-I.K. International Publishing House Pvt. Ltd.
- 3. Stephen J. Chapman-"MATLAB Programming for Engineers"- 5th Edition-Cengage Learning- 2015. Getting started with MATLAB (Version 9) The Math works.
- 4. An Introduction to MATLAB® Programming and Numerical Methods for Engineers 1st Edition by Timmy Siauw Alexandre Bayen, Elsevier-18th April 2014.
- 5. https://nptel.ac.in/courses/103106118/2
- 6. <u>https://www.udemy.com/numerical-methods/</u>

The break-up of CIE : Internal Tests + Assignments + Quizzes

- 1. No. of Internal Tests : 2 Max. Marks for each Internal Test
- 2. No. of Assignments : 2 Max. Marks for each Assignment
- 3. No. of Quizzes : 2 Max. Marks for each Quiz Test

Duration of Internal Tests: 90 Minutes

: 30 : 5 : 5

#### With effect from the Academic Year 2024-25 VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS) ACCREDITED BY NAAC WITH 'A++' GRADE IBRAHIMBAGH, HYDERABAD – 500 031

#### DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

### Introduction to Signals and Systems (General Pool: Open Elective - I)

SYLLABUS FOR B.E. III – SEMESTER (CSE, AI&ML, EEE & IT branches)

L:T:P (Hrs./week) : 2:0:0	SEE Marks : 60	Course Code: U23OE320EC
Credits : 2	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OUTCOMES
On completion of the course, students will be able to
<ol> <li>Analyze basic signals and systems in continuous time domain.</li> <li>Apply the properties of Fourier transformation techniques to analyze continuous time domain signals and systems in frequency domain.</li> <li>Apply Laplace Transform, analyze the LTI systems.</li> <li>Analyze basic signals and systems in</li> </ol>
2.

#### UNIT - I

**Continuous time signals:** types of signals, representation of signals, basic elementary signals, operations on signals.

**Continuous time systems:** classification of systems - static anddynamic, linear and non linear, time invariant and time variant.

Lab Activity: Generation of elementary signals in MATLAB.

#### UNIT - II

**Continuous time Fourier Series:** Introduction, existence, properties, magnitude and phase spectrums

**Continuous time Fourier transforms:** Introduction, existence, properties, magnitude and phase spectrums.

Lab Activity: Verification of properties of Fourier Transform in MATLAB.

### UNIT – III

**Laplace transforms**: Introduction, existence, Laplace transform of basic elementary signals, properties, inverse Laplace transforms, Analysis of LTI systems using Laplace Transform.

## UNIT - IV

**Discrete time signals:** types of signals, representation of signals, basic elementary signals, operations on signals.

**Discrete time systems:** classification of systems - static and dynamic, linear and non linear, time invariant and time variant.

Lab activity: Generation of elementary signals in MATLAB.

VASAVI COLLEGE OF ENGINEERING (Autonomous) IBRAHIMBAGH, HYDERABAD – 500 031

# DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

## NON CONVENTIONAL ENERGY SOURCES

(Open Elective-I) SYLLABUS FOR B.E. III SEMESTER

L:T:P (Hrs/Week):2:0:0	SEE Marks: 60	Course Code: U23OE310EE
Credits:2	CIE Marks: 40	Duration of SEE: 3Hours

<b>COURSE OBJECTIVES</b> The course will enable the students to:	COURSE OUTCOMES On completion of the course, students will be able to
To provide a survey of the most important renewable energy resources and the technologies for harnessing these resources within the framework of a broad range of simple to state- of -the-art energy systems.	<ol> <li>Demonstrate the generation of electricity from various Non- Conventional sources of energy and solar power generation</li> <li>Illustrate the generation of energy from wind and generation of energy from waste</li> <li>Demonstrate the generation of energy by biomass and fuel cells</li> <li>Illustrate the ocean and geo thermal energy generation</li> </ol>

#### UNIT-I: Introduction and Solar Energy:

**Introduction:** Need for Non-conventional energy sources, Types of Non-Conventional energy sources. Renewable energy across the Global and in India. Renewable energy for rural applications, Renewable energy for urban, industrial and commercial applications

**Solar Energy:** Solar cell fundamentals: Semiconductors, Photovoltaic effect, Solar PV cell, module, panel, array, Solar cell operating characteristics: Voltage-current characteristic, energy losses, maximising the performance. Applications of solar energy, Solar energy program in India, Case study

### UNIT-II: Wind Energy and Waste to Energy:

**Wind Energy:** Nature of wind, Basic components of Wind Energy Conversion System(WECS), Power extraction from the wind, Applications of wind energy. Wind energy program in India, Case Study

Waste to Energy: Key issues, Waste recovery management, Case study

### UNIT-III: Biomass Energy and Fuel Cells:

**BiomassEnergy**: Definition, Bio fuels, Biomass resources, Biomass conversion technologies: Incineration- Thermo chemical conversion- Biochemical conversion. Advantages and disadvantages of biomass energy, Case study

**Fuel Cells:** Definition-Classification of fuel cells, Principle of operation, Hydrogen-oxygen fuel cell, Alkaline fuel cell, Proton exchange membrane fuel cell, Molten carbonate fuel cell, Solid oxide electrolyte cells, Comparison of fuel cells- Advantages and Disadvantages of fuel cells-Applications of Fuel cells. Case study

#### UNIT-IV: Ocean Energy and Geothermal Energy:

**Ocean Energy:** Ocean thermal electric conversion (OTEC) methods: Open cycle and Closed cycle- Principles of tidal power generation-Advantages and limitations of tidal power generation, Case study

**Geothermal Energy:** Geothermal resources- Vapour dominated geothermal plant- Liquid dominated geothermal plant- Applications of Geothermal Energy, Case study

#### Learning Resources:

- 1. B H KHAN, Non-Conventional Energy Resources, McGraw Hill, 2<sup>nd</sup> Edition, 2009.

## Introduction to Industrial Robotics (Stream: Robotics ) (Open Elective-I) SYLLABUS FOR B.E.III-SEMESTER

L:T:P(Hrs/week):2:0:0	SEE Marks:60	Course Code: U23OE310ME
Credits :02	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE	COURSE OUTCOMES
The objective of the	On completion of the course,
course is to	students will be able to
study industrial robot	1. explain configuration of
components, configuration,	industrial robots and summarize
sensors, drives, applications	various applications.
and programming through	2. interpret various elements of the
experiential learning.	industrial robots
	3. Develop methodology to
	represent position and
	orientation of industrial robot
	links in spatial coordinate
	system.
	4. classify various sensors used in
	industrial robots and interface
	between the human user and an
	industrial robot using various
	programming languages.

### UNIT-I ROBOT BASICS

Robot-Basic concepts, Need, Law, History, Anatomy, specifications.

Robot configurations-cartesian, cylindrical, polar, articulated and SCARA. Parallel robots

### **ROBOT APPLICATIONS**

Application in industry – material handling, loading & unloading, processing, welding & painting, assembly and inspection

## UNIT-II ROBOT ELEMENTS

End effectors-Classification, Types of Mechanical actuation, Gripper design, Robot joints types, Robot drive system types: Electrical, pneumatic and hydraulic. Position and velocity feedback devices

### UNIT-III

#### **ROBOT COORDINATE SYSTEMS**

Coordinate frames, Rotation matrix, Euler angles, Roll pitch and yaw angle representation, Composite rotations, Homogeneous Transformation matrix.

### UNIT-IV

#### **ROBOT SENSORS**

Sensors in robots – Touch sensors-Tactile sensors – Proximity and range sensors. Force sensors

#### **Robot programming**

On line programming, teach pendant control, Lead through, Walk through, off line programming, Task programming.

#### Learning Resources:

- Mikell P. Groover, Mitchell Weiss, Roger N Nagel and Nicholas G Odrey, "Industrial Robotics Technology, Programming and Applications", Tata Mc Graw-Hill Publishing Company Limited, 2008.

### FUNDAMENTALS OF UNMANNED AERIAL VEHICLES (General Pool) (Open Elective-I) SYLLABUS FOR B.E.III-SEMESTER

L:T:P(Hrs/week):2:0:0	SEE Marks:60	Course Code: U23OE320ME
Credits :02	CIE Marks:40	Duration of SEE: 03Hours

	COURSE OUTCOMES
COURSE OBJECTIVE	On completion of the course, students
	will be able to
The objective of this Course is to understand the features of UAV, elements, navigation and guidance of UAV and to design and silmulate UAV	<ol> <li>Explain the types and characteristics of UAVs and their applications.</li> <li>Illustrate the concepts of aerodynamics of flight vehicle.</li> <li>Identify and explain the components, sensors and payload of UAVs, their navigation and guidance.</li> <li>Design and perform structural, aerodynamic analysis of UAV components</li> </ol>

#### Unit-I: Introduction to UAV

UAV: Definition, History; Difference between aircraft and UAV; DGCA Classification of UAVs; Types and Characteristics of Drones: Fixed, Multirotor, and Flapping Wing; Applications: Defense, Civil, Environmental monitoring.

#### Unit-II: Basics of Flight

Different types of flight vehicles; Components and functions of an airplane; Forces acting on Airplane; Physical properties and structure of the atmosphere; Aerodynamics – aerofoil nomenclature, aerofoil characteristics, Angle of attack, Mach number, Lift and Drag, Propulsion and airplane structures.

### Unit-III: UAV Elements, Navigation and Guidance

Components: Arms, motors, propellers, electronic speed controller (ESC), flight controller; Propulsion; Data Link; Sensors and Payloads: GPS, IMU, Light Detection and Ranging (LiDAR), Imaging cameras, Classification of payload based on applications; Hyper-spectral sensors; Laser Detection and Range (LADAR); Synthetic Aperture Radar (SAR); Thermal cameras; ultrasonic detectors; Case study on payloads. Introduction to navigation systems and types of guidance; Mission Planning and Control.

#### Unit-IV: Design & Simulation of UAV

Introduction to CAD; Design of UAV components; Structural Analysis using CAE; Aerodynamic Analysis using CFD; Manufacturing of the components of UAVs: 3D printing; Case studies;

### Learning Resources:

#### POLYMERIC MATERIALS Title of the course: Materials for Engineers (Open Elective-I) SYLLABUS FOR B.E.III-SEMESTER

Instruction :2Hrs / Week	SEE Marks : 60	Course Code : U23OE310CH
Credits: 2	CIE Marks : 40	Duration of SEE : 3Hours

OBJECTIVES	OUTCOMES
The course will enable the	At the end of the course students
students:	should be able to:
<ol> <li>To familiarize with various types of polymers</li> <li>To acquaint with different methods of polymerization.</li> <li>To converse the different polymerization techniques</li> <li>To familiarize with various high performance/ specialty polymers.</li> </ol>	<ol> <li>Classify the polymers.</li> <li>Analyze the different polymerization methods and their mechanisms.</li> <li>Discuss the polymerization techniques used for the selected polymers.</li> <li>Discuss the synthesis, properties and applications of selected</li> </ol>
	polymers.

#### UNIT-I: INTRODUCTION TO POLYMERS AND TYPES: (5h)

Introduction to various engineering materials, brief history of polymers, importance of polymers in engineering, terminology- ,classification of polymers- a) based on mechanism, b) based on chain topology, c) based on end use d) linear, branched and cross linked polymers e) based on physical state, Nomenclature based on source and based on IUPAC, applications of polymers.

#### UNIT-II: POLYMERIZATION: (7h)

Initiators- Types of Initiators, Thermal Decomposition of Initiators, Redox Initiation, Photochemical Initiation, Initiation by Ionizing Radiation, Pure Thermal Initiation, Other Methods of Initiation, Initiator Efficiency, Definition -Mechanism - Cage Effect.Step-Reaction (Condensation) Polymerization, Polymerization Mechanisms- Mechanism of Stepwise Polymerization, Radical With effect from the Academic Year 2024-25 Chain (Addition) Polymerization, Chain Polymerization, Ionic and Coordination Chain (Addition) Polymerization, Cationic Polymerization, Anionic Polymerization, Copolymerization - Mechanisms of Copolymerization, Block and Graft Copolymers

# UNIT-III: TECHNIQUES OF POLYMERIZATION: (7h)

Living Radical Polymerization - General Considerations, Atom Transfer Radical Polymerization (ATRP) -Polymerization Mechanism, Stable Free-Radical Polymerization (SFRP), Radical Addition–Fragmentation Transfer (RAFT) -and Other Living Radical Polymerizations.process conditions -bulk (mass) polymerization - solution polymerization- emulsion & suspension polymerization - heterogeneous polymerization - other processes; selfassembly and nanostructures.

# UNIT-IV: COMMERCIAL & HIGH-PERFORMANCE POLYMERS: (7h)

Synthesis, properties and applications of commercial polymers: polyvinyl chloride, polystyrene

Requirements for High-Temperature Polymers.

Synthesis, properties and applications of

- 1) Aromatic polyethers: Polyether sulfone,
- 2) Liquid crystal polymers: poly(oxy-1,4-phenylenecarbonyl),
- 3) Inorganic polymers Minerals Glasses Ceramics,
- 4) Organometallic polymers Polysilanes

# Text Books:

- 1. George Odian, Principles of Polymerization Fourth Edition, University of New York.
- 2. Fred w. Billmeyer, Textbook of Polymer Science Third Edition, New York
- 3. P.C.Jain and Monica Jain, "Engineering Chemistry", DhanpatRai Pub, Co., New Delhi (2002)
- 4. Shasi Chawla, "Text Book of Engineering Chemistry", Dhanpat Rai Publishing Company, New Delhi (2008).

# Learning Resources:

- 1. D. Dhara, NPTEL Polymer Chemistry Course, IIT Kharagpur.
- 2. Gowarikar R V, Polymer Chemistry.

#### With effect from the Academic Year 2024-25 VASAVI COLLEGE OF ENGINEERING(Autonomous) ACCREDITED BY NAAC WITH 'A++' GRADE IBRAHIMBAGH, HYDERABAD – 500 031

# LEARNING TO LEARN

(Open Elective-I)

SYLLABUS FOR B.E.III-SEMESTER

L:T:P(Hrs/Week):2:0:0	SEE Marks: 60	Course Code: U23OE310EH
Credits: 2	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES The course will enable the learners to:			COURSE OUTCOMES At the end of the course the learners will be able to: -		
1.	and enable students to cut down on the number of hours spent studying.	1. 2.	Get learners maximize their learning in a stipulated amount of time. Become competent learners and learn creatively.		
competence in learning, the challenges of overlearning, and the advantages of interleaving.		3.	Meet deadlines, submit progress reports and recall what has been learnt for effective usage.		
3.	Handle procrastination and learn for long term.	4.	Set Performance Standards and take initiative based on		
4.	Plan, prioritise and carry out tasks based on goals and priority.		set goals.		

#### OVERVIEW:

No matter what your skill levels in topics you would like to master, you can change your thinking and change your life. If you are struggling to cope, you'll see a structured treasure trove of practical techniques that walk you through what you need to do to get on track. If you've ever wanted to become better at anything, this course will help serve as your guide.

# UNIT 1: STUDY SKILLS

Good study skills can increase a student's confidence, competence, and selfesteem. They can also reduce anxiety about tests and deadlines. This module is designed to develop effective study skills, and enable students to cut down on the number of hours spent studying, leaving more time for other important things in their life

- 1.1 Study Skills Checklist
- 1.2 Learning Styles
- 1.3 Habits of Effective Students
- 1.4 Using the Focused and Diffuse Modes
- 1.5 Introduction to memory and Memory Technique

#### UNIT 2: Chunking

In this module, we're going to be talking about chunks. Chunks are compact packages of information that your mind can easily access. We'll talk about how you can form chunks, how you can use them to improve your understanding and creativity with the material, and how chunks can help you to do better on tests. We'll also explore illusions of competence in learning, the challenges of overlearning, and the advantages of interleaving.

- 2.1 Knowledge Chunking
- 2.2 Skill and Will
- 2.3 Sleep and Learning

#### UNIT 3: Procrastination and Memory

In this module, we talk about two intimately connected ideas procrastination and memory. Building solid chunks in long term memory-chunks that are easily accessible by your short term memory—takes time. This is why learning to handle procrastination is so important. Finally, we talk about some of the best ways to access your brain's most powerful long term memory systems so that learning is long term and the learner has the ability to recall and use it as per need.

- 3.1 Controlling Procrastination
- 3.2 Ranking the importance of tasks with a to- do list
- 3.3 Finding their most productive time
- 3.4 Keeping track of time spent on different tasks
- 3.5 Introduction to Deep learning

# UNIT 4: Renaissance Learning and Unlocking Your Potential

In this module we're going to talk more about important ideas and techniques that will enhance student's ability to learn. Students will also discover how to more profitably interact with fellow learners, how to recognize your own strengths, and how to avoid the "imposter syndrome." Fighter pilots and surgeons use checklists to help them with their critical duties-you can use a similar checklist to help you prepare for tests. Ultimately, you will learn more about the joys of living a life filled with learning!

- 4.1 Psychology of Goal Setting
- 4.2 Criteria for Goal Setting
- 4.3 Steps in Goal Setting
- 4.4 Visioning
- 4.5 Strategy & Action Plan
- 4.6 Goal Progress Review

#### MASTERING LEADERSHIP (Open Elective-I) SYLLABUS FOR B.F.III-SEMESTER

L:T:P(Hrs/Week):2:0:0	SEE Marks: 60	Course Code: U23OE340EH
Credits: 2	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable the	At the end of the course the
learners to:	learners will be able to: -
<ol> <li>Develop self-awareness, assess personal strengths, and set goals for leadership growth.</li> <li>Foster inclusive teamwork by leveraging diverse talents and viewpoints.</li> <li>Apply rational decision-making models and critical thinking to engineering challenges.</li> <li>Manage time efficiently, balance priorities, and integrate continuous improvement practices.</li> <li>Integrate competence-building, self-development, and ethical leadership into engineering leadership roles.</li> </ol>	<ol> <li>Create a personalised leadership development plan, showcasing self-awareness and goals for growth.</li> <li>Demonstrate the ability to lead inclusive teams, leveraging diverse talents and viewpoints.</li> <li>Employ innovative problem- solving techniques to tackle complex technical issues.</li> <li>Demonstrate efficient time management skills, balancing priorities and integrating continuous improvement.</li> <li>Integrate competence-building, self-development, and ethical leadership principles into their engineering leadership roles.</li> </ol>

#### Unit 1: Foundations of Leadership in Engineering (6 hours)

- 1.1 Introduction to Leadership
- 1.2 Exploring diverse leadership styles and their applications
- 1.3 Building Competence and Self-Development
- 1.4 Assessing personal strengths and areas for improvement
- 1.5 Setting SMART goals for leadership and professional growth

# Unit 2: Communication and Team Collaboration (6 hours)

- 2.1 Active listening, empathy, and conflict resolution
- 2.2 Enhancing Personal and Team Performance
- 2.3 Leveraging strengths within a team for optimal performance
- 2.4 Constructive feedback and coaching for skill development
- 2.5 Techniques for fostering a collaborative and high-performing team

# Unit 3: Decision Making and Problem Solving (6 hours)

- 3.1 Rational decision-making models and critical thinking
- 3.2 Strategies for innovative problem-solving in engineering projects
- 3.3 Self-Supervision and Ethical Leadership
- 3.4 Reflecting on personal leadership decisions and their impact
- 3.5 Balancing ethical considerations with technical challenges
- 3.6 Cultivating a culture of integrity and accountability within teams

# Unit 4: Leading Change and Project Management (6 hours)

- 4.1 Navigating technological advancements and industry shifts
- 4.2 Leading teams through organisational change and adaptation
- 4.3 Time Management and Continuous Improvement
- 4.4 Techniques for effective time management and priority setting
- 4.5 Strategies for managing multiple engineering projects and deadlines
- 4.6 Integrating personal and team growth into ongoing project improvement

# METHODOLOGY

- Case Studies
- Demonstration
- Presentations
- Expert lectures
- Writing and Audio-visual lessons

# DEPARTMENT OF PHYSICS

#### FUNDAMENTALS OF SMART MATERIALS AND APPLICATIONS (General Pool-Open Elective-I) SYLLABUS FOR B.F.III-SEMESTER

Instruction :2Hrs/Week	SEE Marks : 60	Course Code : U23OE310PH
Credits: 2	CIE Marks : 40	Duration of Semester End Exam:3 hrs

ne student should at least be ble:
blor
<ul> <li>Identify various smart materials and their significant applications.</li> <li>Summarize various properties and applications of peizo and ferroelectric materials.</li> <li>Apply fundamental principles of pyro and thermoelectricity in relevant fields of engineering.</li> <li>Explain types of shape memory alloys and their properties and</li> </ul>

## UNIT I: INTRODUCTION TO SMART MATERIALS (6 hours)

Characteristics of metals, polymers and ceramics. Introduction to smart materials, need for smart materials, Classification of smart materials, Components of a smart System, Applications of smart material, role of smart materials in developing intelligent systems and adaptive structures.

## UNIT II: PIEZO AND FERRO ELECTRIC MATERIALS (8 hours)

Piezo electric effect and inverse piezoelectric effect, Piezo electric materials, Structure of Quartz crystal, piezoelectric oscillator, Magnetostriction, Magnetostriction oscillator, piezo-electric sensors, applications of Piezo-electric materials. Characteristics and properties of ferroelectric materials, Curie-Weiss law, applications of Ferro electric materials.

# UNIT III: PYRO AND THERMO-ELECTRIC MATERIALS (6 hours)

**Pyro electricity**: pyro electric effect, pyro electric materials, pyro-electric detector.

**Thermoelectricity**: thermoelectric effect, Seebeck effect, Peltier effect, thermocouple, Principle and working of thermoelectric generator and Thermoelectric cooler, applications of thermoelectric materials

# UNIT IV: SHAPE MEMORY MATERIALS (8 hours)

Introduction to shape memory alloys (SMA)- Shape Memory Effect (SME), Austenite, Martensite phases, Properties and characteristics SMAs, one-way and two-way shape memory effects, Properties of Ni-Ti shape memory alloy, Cu-based shape memory alloys, and their applications, Applications of SMAs.

## Learning Resources:

- 1. Mukesh V. Gandhi, Brian S Smart Materials and Structures, Thompson, Springer, May- 1992
- 2. D. Patranabis, Sensors and Transducers, PHI Learning Pvt. Ltd., 2022
- 3. Nachiketa Tiwari, Bishakh Bhattacharya, Smart Material, Adaptive Structures & Intelligent Mechanical Systems

residue theorem.	series.		
	4. Evaluate the complex integrals		
	by Cauchy's Residue theorem		

#### UNIT – I (8 classes)

# DIFFERENTIATION OF COMPLEX FUNCTION

Introduction to complex function-Limits and Continuity of function - Differentiability and Analyticity - Necessary & Sufficient Condition for a Function to be Analytic(Cartesian) - Milne-Thompson's method -Harmonic Functions.

#### UNIT – II (6 classes) INTEGRATION OF COMPLEX FUNCTION

Complex Integration- Cauchy's Theorem(with proof) - Cauchy's Integral Formula(with proof) - Evaluation of integrals by Cauchy's Integral formula.

## UNIT – III (6 classes) SERIES OF COMPLEX FUNCTIONS

Power series - Taylor's Series - Laurent's Series (without proofs) –Zero and singularities of complex function.

## UNIT – IV(8 classes) RESIDUES

Introduction to Residues- Residues at singularities-Cauchy's Residue theorem (without proof) –Evaluation of integrals by Cauchy's Residue theorem.

# UNIT – I (6 Hours)

**Theory of Numbers:** The Integers and Division- Prime and Composite Numbers -Division Algorithm- Fundamental Theorem of Arithmetic –GCD and their properties- Euclidean Algorithm- Modular Arithmetic- Linear Diophantine Equations and their solutions.

# UNIT – II (8 Hours)

**Congruences:** Introduction to Congruences, Linear Congruence. Chinese Remainder Theorem -Polynomial Congruences- System of Linear Congruences in two variables- The Pollard Rho Factoring Method- Fermat's Little Theorem, Wilsons Theorem and its converse

# UNIT – III (5 Hours)

**Primitive Roots**: Euler's phi-function - Euler's theorem - The order of an integer modulo n, Primitive roots for primes - Lagrange's Theorem - Existence of Primitive roots.

# UNIT – IV (6 Hours)

**Boolean Algebra:** Axiomatic definition of Boolean Algebra, Basic theorems and Properties of Boolean Algebra, Boolean Functions, Minterms and Maxterms, Disjunctive normal form and conjunctive normal form.

# **Text Books:**

- 1. K.H. Rosen: Elementary Number Theory & its Applications, Pearson Addition Wesley
- 2. Elementary Number Theory | 7th Edition by David Burton, Mc Graw Hill Education
- Discrete mathematics for computer scientists and mathematicians / by Joe L. Mott, Abraham Kandel and Theodore P. Baker, Prentice Hall Of India Pvt.Ltd., 1986.Edition: 2nd edition, New Delhi.
- 4. Basic Number Theory by S.B. Malik, S. Chand publishers

# Reference Books:

- 1. N. Koblitz; A course in Number theory and Cryptography; Springer.
- 2. Neville Robinns, Beginning Number Theory (2nd Edition), Narosa Publishing House Pvt. Limited, Delhi, 2007.
- Elementary Number Theory with Applications, Thomas Koshy, 2nd edition, Academic Press, An Imprint of Elsevier, USA, 2007.

- 4. An introduction to the theory of number, Ivan Niven, Zuckerman, Montgomery, willy India edition
- 5. Arnold B. H.: Logic and Boolean Algebra, Prentice Hall, 1962.

SYLLABUS FOR BE -III SEMESTER (COMMON FOR ALL BRANCHES)

L:T:P(Hrs/Week):2:0:0	SEE Marks: 40	Course Code: U23HS320EH
Credits: 1	CIE Marks: 30	Duration of SEE : 2 Hours

#### COURSE OBJECTIVES COURSE OUTCOMES The course will enable the At the end of the course learners to: the learners will be able to: 1. Get students proficient in both 1 Introduce themselves effectively and converse receptive and productive skills especially virtually in a formal environment Enable students to understand especially in the online 2. the importance and method of space 2. Write emails with exchanging information in a formal space- both written and appropriate structure and content spoken Introduce students to an ideal 3. 3 Use appropriate structure structure for a presentation and based on the content discussion- individually and in employing appropriate transitions in written and groups 4. Develop and improve reading spoken communication skills needed for college work 4. Paraphrase content and write an effective and reproduce the content based on the situational need. summary

#### Unit 1: Delightful Descriptions

- 1.1 Introductions on an Online Forum
- 1.2 Making Observations and Giving Opinion
- 1.3 Recalling and Describing

# Unit 2: Formal Conversation Skills

- 2.1 Ask for Information
- 2.2 Give Information
- 2.3 Give Feedback
- 2.4 Seek Permission

#### **Technical Expositions and Discussions** Unit 3:

- 3.1 Classification
- 3.2 Sequence
- 3.3 Compare and Contrast
- 3.4 Cause and Effect
- 3.5 Problem and solution

## Unit 4: Rational Recap

- 4.1 Paraphrasing Written
- 1.2 Summarizing Written
- 1.3 Paraphrasing Spoken
- 1.4 Summarizing Spoken

# **METHODOLOGY**

- Case Studies
- Demonstration
- Presentations
- Expert lectures
- Writing and Audio-visual lessons

#### Skill Development Course-II (Technical Skills-I) Problem Solving through Data Structures SYLLABUS FOR B.E. III-SEMESTER

L:T:P (Hrs./week):1:0:0	SEE Marks : 40	Course Code: UI23PE310CS
Credits : 1	CIE Marks : 30	Duration of SEE : 2 Hours

	COURSE OUTCOMES
COURSE OBJECTIVES	On completion of the course,
	students will be able to
1. Understand the significance of	1. Solve scenario based problems
Competitive Coding	on linked lists, Recursive
2. Prepare the students for the	Algorithms, Search & Sort
contests relative to the	Algorithms, Divide & Conquer
concepts learnt	Strategies and use memory
3. Build confidence in coding	manipulation functions.
using Linear Data structures	2. Learn linear data structures
4. Learn essential algorithms for	usage in various applications
Competitive Coding	with scenario based problem
	solving through coding.

#### Code Complexity Analysis & Linear List data

Problem solving through Coding, Compare and contrast coding and competitive coding, Various approaches for problem solving, techniques for competitive coding, Orientation on Competitive coding on coding platforms like Codechef/ Codeforces/ Leetcode/ Hackerrank etc.

Precise coding techniques implementing the evaluation of the language supported expressions, code complexity analysis, Linear / Logarithmic/ Super linear/ Polynomial/ Exponential/ Recursion Algorithm analysis, Problem Solving using Linear list data, Subscripts, 2D Array Subscript, RMO & CMO Representation, Matrix Problems. Company Specific Examples & Competitive Programming Practice Problems.

Contextual implementation using Competitive Coding using global coding platforms: Code chef/ Leet code / Codeforces / Hackerrank etc.

## Memory Manipulation Methods and Problem Solving on ring

Pointer Variable, Pointer Arithmetic, Memory Layout, Runtime memory allocation, Problem Solving on String Data, String handling methods, Examples, Practice Problems.

# Problem Solving using Linked List data

Implementing a Structure member pointer reference, Coding solutions for Linked list manipulation, Solutions for order statistic problems on linked lists: Comparison/ Cycle Detection/ Merge Point Detection/ Merging the lists, Coding solution for the circular linked data and Double linked data, coding problems, Examples, Practice problems.

#### Problem Solving using Abstract data structures: Stacks

Problem solving using Stacks, Coding solutions for the implementation of stack using an array, Coding solutions for the implementation of stack using a linked list. Problem solving on expression conversion and evaluation, Examples, Practice problems.

#### Problem Solving through Queues & Search-Sort Algorithms

Problem solving using Queues, Coding solutions for the implementation of queue using an array/ linked list, Divide & Conquer Strategies: Linear Vs Binary Search Analysis, Bubble sort and Selection Sort Analysis, Examples, Practice problems.

#### Problem Solving through Divide & Conquer Strategies

Divide & Conquer Strategies: Quick sort Analysis, Merge Sort Analysis, Min/Power functions, Examples, Practice problems.

#### Human Values and Professional Ethics-II

SYLLABUS FOR B.E- III SEMESTER (COMMON FOR ALL BRANCHES)

L:T:P(Hrs/Week):1:0:0	SEE Marks: 40	Course Code: U23HS030EH	
Credits: 1	CIE Marks: 30	Duration of SEE: 02 Hours	

COU	RSE OBJECTIVES	COURSE OUTCOMES		
The	course will enable the learners	At the end of the course the		
to:		lear	ners will be able to: -	
1.	Create an awareness on the	1.	Identify ethical risks in everyday	
	interrelation between Society,		life and in societies that can lead	
	Ethics and Human Values		to unethical choices, such as	
2.	Understand how ethical dilemmas		structures that diffuse	
	apply to real life scenarios		responsibility or a group that has	
3.	Develop ethical human conduct		collectively de-stigmatized	
	and professional competence		unethical behaviour	
4.	Understand the role of good	2.	Identify ethical concerns in	
	ethical practices and apply it in a		research and intellectual contexts,	
	project		including academic integrity, use	
			and citation of sources, and the	
		_	objective presentation of data.	
		3.	Assess their own ethical values	
			and the social context of problems	
			and articulate what makes a	
			particular course of action ethically	
			defensible	
		4.	Demonstrate knowledge of ethical	
			values in non-classroom activities,	
			such as service learning,	
			internships, and field work	
			integrate, synthesize, and apply	
			knowledge of ethical dilemmas and resolutions in academic	
			settings, including focused and	
			interdisciplinary research	

#### UNIT 1: NORMATIVE ETHICS & SOCIETAL ETHICS

This unit deals with normative ethics, the branch of moral philosophy, or ethics, concerned with criteria of what is morally right and wrong. It includes

the formulation of moral rules that have direct implications for what human actions, institutions, and ways of life should be like. This unit also covers societal ethics which is the systematic reflection on the moral dimensions of social structures, systems, issues, and communities.

- 1.1 Ethical Decision-Making Frameworks
- 1.2 Emerging Ethical Challenges
- 1.3 Building a Just Society

# UNIT 2: PROFESSIONAL ETHICS - NEED FOR ETHICAL CODES

This unit covers the code of Professional Ethics- it is designed to ensure that students learn the necessary skills that groom them to behave like employees should, one that is socially acceptable and respectful of one another. It establishes the rules for behavior and sends a message to every employee that universal compliance is expected.

- 2.1 The Importance of Ethical Conduct
- 2.2 Personal & Professional Accountability
- 2.3 Maintaining Public Confidence
- 2.4 Understanding Ethical Codes

## UNIT 3: PRIVACY

This unit covers "Cyber ethics" - the code of responsible behavior on the Internet. Just as we are taught to act responsibly in everyday life with lessons such as "Don't take what doesn't belong to you" and "Do not harm others," we must act responsibly in the cyber world as well.

The basic rule is "Do not do something in cyberspace that you would consider wrong or illegal in everyday life."

- 3.1 Defining Privacy
- 3.2 Privacy in the Digital Age
- 3.3 The Ethics of Surveillance

# UNIT 4: Engineering Ethics for Future Innovators

This unit equips students, the future innovators of tomorrow, with a foundation in engineering ethics. Students will explore the ethical responsibilities engineers hold regarding safety, public well-being, and sustainability. Real-world scenarios and case studies will be examined to understand how ethical considerations impact engineering decisions.

- 4.1 Safety and Public Welfare
- 4.2 Sustainability and Environmental Impact
- 4.3 The Ethics of New Technologies

## MODE of DELIVERY

Questionnaires	Discussions
Quizzes	Skits
Case-studies	<ul> <li>Short Movies/documentaries</li> </ul>
Observations and practice	<ul> <li>Team tasks and individual tasks</li> </ul>
Home and classroom	<ul> <li>Research based tasks</li> </ul>
assignments	Project

## MICROPROCESSORS, MICROCONTROLLER &INTERFACING LAB SYLLABUS FOR B.E. III-SEMESTER

L:T:P (Hrs./week): :0:2	SEE Marks : 50	Course Code: UI23PC311CS
Credits : 1	CIE Marks : 30	Duration of SEE : 3 Hours

	COURSE OBJECTIVES		<b>COURSE OUTCOMES</b> In completion of the course, udents will be able to
1	Implement assembly language programs in 8086 microprocessor, 8051 and ARM controller.	1	Implement programs using instruction set of 8086 microprocessor.
2	Interface I/O devices to Microprocessor and Microcontroller.	2	macros and sub routines in 8086 microprocessor.
		5	interface I/O devices with 8086 microprocessor.
		4	Develop an application to interface I/O devices using 8051 microcontroller.
		5	Implement assembly language programs using ARM processor.

#### 8086 PROGRAMMING USING MICROPROCESSOR TRAINER KIT

- 1. Execution of basic programs on 8086Microprocessor.
- 2. Programs using different addressing modes.
- 3. Programs using single byte, multi byte, binary, BCD addition and subtraction.
- 4. Programs on searching and sorting.
- 5. Generation of waveforms using DAC interface.
- 6. Interfacing and programming of 8255. (E.g. traffic light controller).
- 7. Interfacing keypad/display unit.

#### 8051 PROGRAMMING

- 8. Execution of basic programs on 8051 Microcontroller.
- 9. Programs on searching and sorting.
- 10. Interfacing Stepper Motor.
- 11. Interfacing LCD Display.
- 12. Interfacing Keypad.
- 13. Execution of basic programs using ARM Processor
- 14. ARM's Barrel Shifter program

#### Learning Resources:

- 1. Douglas V. Hall, Microprocessors and Interfacing, 2ndEdition (2006), McGraw Hill.
- 2. Kenneth J. Ayala, "The 8051 Microcontroller Architecture, Programming and Application", Penram International (2007)
- 3. Marilyn Wolf, Computers as Components: Principles of Embedded Computing System Design, 3rd Edition (2012), Elsevier Morgan Kauffmann Publishers.

#### DATA STRUCTURES LAB

SYLLABUS FOR B.E. III-SEMESTER

L:T:P(Hrs./week): 0:0:2	SEE Marks : 50	Course Code: UI23PC321CS
Credits : 1	CIE Marks : 30	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
1	Design and analyze linear and nonlinear data structures	1 Implement insert, delete, search, sort and traverse operations on array and linked list
2	Acquire programming skills to implement sorting and searching techniques	2 Develop applications using stack and queue
3	Identify and apply the suitable data structure for the given real world problem	<ul> <li>3 Apply nonlinear data structures to solve a problem</li> <li>4 Implement appropriate sorting technique for a given data set</li> </ul>
		5 Implement hashing techniques to perform dictionary operations

#### Programming Exercise:

- 1. Implementation of Formula based representation.
- 2. Implementation of Singly Linked List, Doubly Linked List and Circular Linked List.
- 3. Implementation of Polynomial Arithmetic using Linked List.
- 4. Implementation of String Matching algorithms.
- 5. Implementation of Stacks, Queues. (Using both Arrays and Linked Lists)
- 6. Implementation of Infix to Postfix Conversion, Postfix Expression Evaluation.
- 7. Implementation of Recursive and Iterative Traversals on Binary Tree.
- 8. Implementation of Binary Search Tree.
- 9. Implementation of Operations on Binary Tree (Delete Entire Tree, Copy Entire Tree, Mirror Image, Level Order, Search for a Node etc.)
- 10. Implementation of Traversal on Graphs.
- 11. Implementation of Selection, Merge, Quick, Heap, and Insertion Sort.

- 12. Implementation of Binary Search and Hashing
- 13. Implementation of operations on AVL Trees.
- 14. Implementation of B-Trees.
- 15. Develop application using appropriate data structures.

#### Learning Resources:

## **OBJECT ORIENTED PROGRAMMING LAB**

SYLLABUS FOR B.E. III-SEMESTER

L:T:P(Hrs./week):0:0:2	SEE Marks: 50	Course Code: UI23PC331CS
Credits : 1	CIE Marks : 30	Duration of SEE : 3 Hours

		COURSE OUTCOMES				
	COURSE OBJECTIVES	On completion of the course,				
		students will be able to				
1	Implement object oriented concepts using Java constructs	1 Implement a use-case using object oriented programming concepts				
2	Develop Java application using collection frame work and streams	<ol> <li>2 Develop applications using multi threaded programming</li> <li>3 Implement I/O operations using console and file streams</li> </ol>				
		4 Apply collection framework to store and manipulate data				
		5 Apply functional programming constructs				

#### Programming Exercise:

- 1. A program to demonstrate the concept of class with constructors, methods and overloading.
- 2. A program to demonstrate the concept of inheritance and dynamic Polymorphism Abstract class & Interface
- 3. A program to create Packages.
- 4. A program to demonstrate Exception Handling.
- 5. A program to demonstrate Thread Synchronization.
- 6. A program to work on strings using String classes.
- 7. A program to demonstrate the usage of Filter and Buffered I/O streams
- 8. A program to demonstrate Serialization and Deserialization
- 9. A program using List & Set interfaces, Iterator & List Iterator
- 10. A program using Mapinterface, Date, Calendar & Timer.
- 11. A program to implement object comparison using comparator
- 12. A program to implement Lambda Functions
- 13. A program to implement Stream API
- 14. A program to demonstrate usage of Regular Expressions

# CALCULUS & MATRIX THEORY BRIDGE COURSE FOR B.E. III-SEMESTER (Common to all branches)

L:T:P (Hrs./week): 2:0:0	SEE Marks : 50	Course Code : UB23BS300MA			
Credits :	CIE Marks :	Duration of SEE : 3 Hours			

## UNIT-I: (08 Hours) CALCULUS

Differentiation of standard functions (Formulae) - Taylor's Series – Maclaurin's Series for functions of one variable - Partial Derivatives – Total Derivative - Derivative of Composite functions and Implicit functions - Chain Rule.

## UNIT –II (06 Hours) VECTOR DIFFERENTIATION

Scalar and Vector point functions -Vector Differentiation-Level Surfaces-Gradient of a scalar point function- Normal to a level surface- Directional Derivative – Divergence and Curl of a Vector field -Solenoidal and Irrotational vector-Conservative vector field.

## UNIT - III (06 Hours)

**MULTIPLE INTEGRALS:** Double integrals - Change of order of integration (Cartesian Coordinates) – Change of variables (Cartesian to polar coordinates in two dimensions) - Triple integrals (Cartesian).

#### UNIT- IV (06 Hours)

#### MATRIX THEORY

Rank of matrix- Echelon form - -System of Linear Equations- Consistency of Homogeneous and Non-homogeneous system of equations- Eigen values and EigenVectors.

#### Suggested Books:

- Advanced Engineering Mathematics, Third Edition, R. K. Jain and S. R. K. Iyengar, Narosa Publishing House.
- 2. Higher Engineering Mathematics, Dr.B.S. S Grewal 40<sup>th</sup> Edition, Khanna Publishers.

SYLLABUS FOR BRIDGE COURSE B.E. III-SEMESTER

L:T:P (Hrs./week): 2:0:0	SEE Marks : 50	Course Code : UB23ES310CS
Credits :	CIE Marks :	Duration of SEE : 3 Hours

		COURSE OUTCOMES
	COURSE OBJECTIVES	On completion of the course, students will
		be able to
1.	Acquire problem solving	1. Design flowcharts and algorithms for
	skills	solving a problem and choose
2.	Develop flow charts	appropriate data type for writing
3.	Understand structured	programs in C language
	programming concepts	2. Design modular programs involving
4.	Write programs in C	input output operations, decision
	Language	making and looping constructs
		3. Apply the concept of arrays for
		storing, sorting and searching data
		4. Apply the concept of pointers for
		dynamic memory management and
		string handling
		5. Design programs to store data in
		structures and files

#### UNIT-I

**Introduction to Computers:** Computer Systems, Computing Environments, Computer Languages, Creating and Running Programs, Flowcharts.

**Introduction to C Language**- Background, C Programs, Identifiers, Types, Variables, Constants, Input/Output, Expressions, Precedence and Associativity, Side Effects, Evaluating Expressions, Type Conversion, Statements, Bitwise Operators.

#### UNIT-II

**Selection:** Logical Data and Operators, if... else, switch Statements, Standard Functions.

**Repetition:** Loops, while, for, do-while Statements, Loop Examples, break, continue, goto.

**Functions:** Designing Structured Programs, Functions Basics, User Defined Functions.

#### UNIT-III

**Recursion**-Recursive Functions, Preprocessor Commands.

**Arrays:** Two-Dimensional Arrays, Linear Search and Binary Search, Selection Sort and Bubble Sort.

#### UNIT-IV

**Pointers:** Introduction, Pointers to Pointers, Arithmetic operations using pointers

**Strings** – Concepts, C Strings, String Input/output, Functions, Arrays of Strings, String Manipulation Functions.

#### UNIT-V

**Structure:** Definition and Initialization of Structures, Accessing Structures, Nested Structures, Arrays of Structures, Structures and Functions, Pointers to Structures, Unions.

**Input and Output:** Files, Streams, Standard Library Input/Output Functions, Character Input/Output Functions.

#### Learning Resources:

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks : 60	Course Code: UI23PC410CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to		
<ol> <li>Understand the concepts of set theory, arithmetic logic and proof techniques</li> <li>Build mathematical models to solve the real world problems by using appropriate methods</li> </ol>	<ol> <li>Construct compound statements using logical connectives and verify the validity of conclusion using inference rules</li> <li>Apply number theory concepts to check the given number is prime or not</li> <li>Compare types of relations and functions and also apply principle of inclusion and exclusion to solve counting problems</li> <li>Solve types of recurrence relations to find the complexity of an algorithm</li> <li>Develop crypto system using Ring and modular arithmetic</li> </ol>		

#### UNIT – I : Fundamentals of Logic

Basic Connectives and Truth Tables, Logical Equivalence, Logical Implication, Use of Quantifiers, Definitions and the Proof of Theorems.

**Functions:** Cartesian Product, One-to-one, Onto Functions, Special Functions, Pigeonhole Principle, Composition and Inverse Functions.

#### UNIT - II : Number Theory: Properties of the Integers

Prime Numbers, The division algorithms, The Greatest Common Divisor, The Integers modulo nFermat's and Euler Theorems, The Fundamental theorem of arithmetic. Fermat's and Euler Theorems The Chinese Reminder Theorem(without proof)

#### UNIT – III: Relations

Partial Orders, Equivalence Relations and Partitions.

**Principle of Inclusion and Exclusion:** Principles of Inclusion and Exclusion, Generalizations of Principle, Derangements, Rook Polynomials, Arrangements with Forbidden Positions.

#### UNIT – IV : Generating Functions

Introductory Examples, Definition and Examples, Partitions of Integers, Exponential Generating Function, Summation Operator.

**Recurrence Relations:** First – Order Linear Recurrence Relation, Second – Order Linear Homogenous Recurrence Relation with Constant Coefficients, Non Homogenous Recurrence Relation.

#### UNIT - V : Algebraic Structures& Ring Theory

Algebraic System – General Properties, semi groups, Monoids, Homomorphism, Cosets and Lagrange's Theorem. The Ring structure: Definition and Examples, Ring Properties and Substructures, Ring Homomorphism and Isomorphism.

#### DATABASE MANAGEMENT SYSTEMS

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P(Hrs./week):3:0:0	SEE Marks:60	Course Code: UI23PC420CS
Credits : 3	CIE Marks:40	Duration of SEE : 3 Hours

соι	JRSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
i i	dentify issues involved n the design and mplementation of a database system.	1 Identify the functional components of database management system. Design conceptual data model using Entity Relationship Diagram.
2 l p	Understand transaction processing, concurrency control and recovery rechniques.	<ol> <li>2 Transform a conceptual data model into a relational model.</li> <li>3 Apply normalization techniques in database design.</li> <li>4 Apply indexing and hashing techniques for effective data retrieval.</li> <li>5 Analyze strategies for managing security, backup and recovery of data.</li> </ol>

#### UNIT-I:

**Introduction:** Database System Application, Purpose of Database Systems, View of Data, Database Languages, Relational Database, Database Design, Data Storage and Querying, Data Mining and Information retrieval, Database Architecture, Database Users and Administrators.

**Database Design and E-R Model:** Overview of the Design Process, The E-R Model, Constraints, E-R Diagrams, E-R Design Issues, Extended E-R features, Reduction to Relational Schemas.

#### UNIT-II:

**Relational Model:** Structure of Relation Database, Fundamental Relational Algebra Operations, Additional Relational Algebra Operations, Extended Relational Algebra Operations, Modification of the Database, Relational Calculus.

**Structured Query Language:** Introduction, Basic Structure of SQL Queries, Set Operations, Additional Basic Operations, Aggregate Functions, Null Values, Nested Sub queries, Views, Join Expression.

## UNIT-III:

**Advanced SQL:** SQL Data Types, Integrity constraints Authorization, Functions and Procedural Constructs, Recursive Queries, Triggers, JDBC, ODBC and Embedded SQL.

**Relational Database Design:** Features of Good Relational Designs, Atomic Domains and first Normal form, Decomposition Using Functional Dependencies, functional Dependency Theory and Decomposition using Multivalue Dependencies

#### UNIT-IV:

**Indexing and Hashing: Basic** Concepts, Ordered Indices, B+ Tree Index Files, B-Tree Files, Multiple – Key Access, Static Hashing, Dynamic Hashing, Comparison of Ordered Indexing and Hashing.

**Transaction Management:** Transaction concept, Storage Structure, Transaction Atomicity and Durability, Transaction Isolation and Atomicity, Serializability, Recoverability.

## UNIT-V:

**Concurrency Control:** Lock Based Protocols, Timestamp – Based Protocols Validation Based Protocols, Deadlock Handling.

**Recovery System:** Failure Classification, Storage Structure Recovery and Atomicity, Log Based Recovery

**NoSQL:**Introduction to NOSQL, NoSQL Vs RDBMS, Categories of NoSQL Databases, Case studies: HBase, Firebase, MongoDB, Cloud DB.

### **OPERATING SYSTEMS**

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: UI23PC430CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
1	Understand Operating system Structures, Services and threading models	1 Explain Operating system structures and internal structure of a process and Compare CPU scheduling algorithms
2	Learn operating system services by considering case studies such as Linux, Windows and Android	2 Apply contiguous & non- contiguous techniques for main memory management.
		3 Design solutions for classical synchronization problems and describe deadlock handling methods
		4 Explain file system Implementation and device management.
		5 Explain I/O operation implementation techniques and apply Access matrix for system protection. Describe the features of Linux, Windows and Android Operating systems

#### UNIT-I:

**Introduction to operating systems:** Operating system services, User and Operating- system interface, System calls, Operating system structure.

**Process**: Process concept, Process Scheduling, Operations on process, Threads, Multithreading Models, Multicore programming.

**CPU Scheduling:** Scheduling Criteria, Scheduling Algorithms, Multiprocessor scheduling.

### UNIT-II:

**Memory Management**: Swapping, Contiguous memory allocation, Paging, Segmentation, Structure of the page table.

**Virtual memory**: Demand paging, Page replacement Algorithms, Thrashing, Allocating Kernel memory.

#### UNIT –III:

**Process synchronization:** The critical Section problem, Peterson's solution, Synchronization Hardware, Semaphores, Classic problems of Synchronization, Monitors.

**Deadlocks**: System model, deadlock characterization, Methods for handling deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from deadlock.

### UNIT –IV:

File System Interface: File Concept, Access Methods, Directory and Disk Structure

**File System Implementation**: File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free Space management.

**Device Management**: Disk Structure, Disk Attachment, Disk Scheduling, Disk Management, Swap Space Management, RAID structure.

### UNIT-V:

**I/O System**: I/O hardware, Application I/O Interface, Kernel I/O Subsystem, Transforming I/O request to hardware operation.

**Protection**: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of Access matrix

**Case Studies**: Linux System: Design Principles, Process Management, Scheduling

Windows 10 - Design Principles, System components, Terminal Services & Fast user switching, File system

#### Learning Resources:

### DESIGN AND ANALYSIS OF ALGORITHMS

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P (Hrs./week):3:0:0	SEE Marks:60	Course Code: UI23PC440CS
Credits : 3	CIE Marks:40	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
1	Analyze the asymptotic performance of algorithms	<ol> <li>Compare asymptotic behavior of functions derived from algorithms</li> </ol>
2	Apply algorithm design strategies to solve science and engineering problems.	<ol> <li>Apply divide &amp; conquer and greedy algorithmic design paradigms to solve problems</li> <li>Design algorithms using Dynamic Programming strategy</li> <li>Design algorithms for problems using backtracking and branch &amp; bound algorithm design techniques</li> <li>Identify the complexity class of a given problem</li> </ol>

#### UNIT – I:

Introduction: Introduction to Algorithm, algorithm specification.

**Performance analysis**: space complexity, time complexity. Asymptotic notations, amortized analysis, Masters theorem.

#### UNIT – II:

**Divide and Conquer:** General method, Binary search, finding maximum and minimum, Merge sort, Quick sort, Expected Running Time of Randomized Quick Sort, Strassen's Matrix Multiplication Algorithm, Karatsuba's large Integer Multiplication.

**The Greedy Method:** The general method, Knapsack problem, Job sequencing with deadlines, Minimum cost spanning trees, Optimal Storage on Tapes, Optimal Merge Patterns, Single Source Shortest Path, Ford–Fulkerson algorithm for Maximum flow problem.

**UNIT – III: Dynamic Programming:** The general method, Matrix-chain multiplication problem, Multistage graph, All Pairs Shortest Paths, Optimal Binary

Search Trees (OBST), 0/1 Knapsack, Reliability Design, Traveling Salesman Problem, Bi-connected Components and DFS, Longest Common Subsequence (LCS) problem.

### UNIT – IV:

**Backtracking:** General method, the 8-Queens Problem, Graph Coloring, Hamiltonian Cycles, Knapsack Problem.

**Branch and Bound:** The method, 0/1 Knapsack problem, Traveling Salesperson problem.

**UNIT – V: NP-Hard and NP-Complete problems:** Tractable and intractable problems, Non-Deterministic search and sorting, classes P, NP, NP-Complete, NP-Hard, Satisifiability (SAT), Cook's theorem, reductions, Procedure for NP-Complete, Clique Decision Problem, Traveling Salesperson problem, Approximation algorithm for Vertex Cover Problem, Set Cover Problem.

### MACHINE LEARNING

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P(Hrs./week):3:0:0	SEE Marks:60	Course Code: UI23PC450CS
Credits : 3	CIE Marks:40	Duration of SEE : 3 Hours

COURSE OBJECTIVE	COURSE OUTCOMES On completion of the course, students will be able to
To formulate machine learning problems corresponding to an application.	<ol> <li>Explain the basics of concept learning and inductive learning.</li> <li>Design decision tree neural network solve classification problems.</li> <li>Comprehend probabilistic methods for learning.</li> <li>Explain the instance based learning and reinforcement learning.</li> <li>Build optimal classifiers using Genetic Algorithm and deep learning.</li> </ol>

#### UNIT-I:

**Introduction:** Well-Posed Learning Problems, Designing a Learning System, Perspectives and Issues in Machine Learning, Types of Machine Learning.

**The Concept Learning:** A concept Learning Task, Concept learning as Search: General –to- Specific Ordering of Hypothesis, Find-S: Finding Maximally Specific Hypothesis, Version spaces and the CANDIDATE- ELIMINATION ALGORITHM: Representation, The List-Then-Eliminate Algorithm, Candidate Elimination Learning Algorithm, Inductive bias.

### UNIT-II:

**Supervised Learning-** Introduction, Classification, Algorithms- **Decision Tree Learning:** Introduction, Decision Tree Representation, Approximate Problems for Decision Tree Learning, The Basic Decision Tree Algorithm, Hypothesis space search in Decision Tree Learning, Issues in Decision Tree Learning. **Artificial** 

**Neural Networks:** Introduction, Neural Network Representation, Perceptrons, Gradient descent and the Delta rule, Multilayer Networks and the Backpropagation Algorithm, Derivatives of back propagation rule. Back propagation algorithm- Convergence, Generalization.

**Evaluating Hypotheses:** Estimating hypotheses Accuracy, Basics of sampling theory.

### UNIT-III:

**Bayesian Learning:** Introduction, Bayes Theorem, Concept Learning, Bayes Optimal Classifier, Naïve Bayes Classifier, Bayesian Belief networks,

**Un Supervised Learning** – Introduction, Clustering Algorithms- K means and EM algorithm.

**Computational Learning Theory:** Introduction, Probably Learning an Approximately Correct Hypothesis, Sample Complexity for Finite Hypothesis Spaces: E-Exhausting the version space, Sample Complexity for Infinite Hypothesis Spaces: Shattering a set of Instances, The Vapnik-Chervomenkis Dimension

### UNIT-IV:

**Instance-based Learning:** Introduction, k-Nearest Neighbor Learning, Locally Weighted Regressions, Radial Basis Functions, Case –based learning. **Reinforcement Learning:** Introduction, Learning Task, Q Learning.

#### UNIT-V:

**Genetic Algorithms:** Motivation, Genetic Algorithm-Representing Hypotheses, Genetic Operators, Fitness Function and Selection, An Illustrative Example, Hypothesis Space Search, Genetic programming, Models of Evolution and Learning.

**Deep Learning:** Convolutional neural networks, Recurrent neural networks.

#### SOLID WASTE MANAGEMENT (Open Elective-II)

SYLLABUS FOR B.E. IV-SEMESTER

L : T : P (Hrs./week):3:0:1	SEE Marks:60	Course Code: U23OE410CE
Credits : 3	CIE Marks:40	Duration of SEE: 3 Hrs

	COURSE OBJECTIVES	COURSE OUTCOMES
In th	-	Upon the completion of this course students will be able to
1.	Understand characteristics of solid waste and legislation of solid waste management.	<ol> <li>Understand types, characteristics, composition of solid waste and rules laid for its management as per</li> </ol>
2.	Understand processing, collection and transportation of solid wastes.	legislation. 2. Apply gained knowledge of waste reduction methods, collection
3.	Gain insight into transformation, energy recovery and disposal of solid waste.	techniques, resource recovery/recycling, energy recovery, transport & transfer options for solid waste
4.	Grasp the fundamentals of hazardous waste and its management.	<ul><li>management.</li><li>3. Identify appropriate technologies for transformation and disposal of</li></ul>
5.	Understand the solid waste management practices adopted actual practical scenarios.	<ul> <li>solid waste.</li> <li>4. Categorize solid waste as hazardous or non- hazardous based on solid waste toxicology principles.</li> <li>5. Analyze and apply solid waste management techniques in actual practice.</li> </ul>

**UNIT- I:** Solid waste generation and material flow, sources and types of solid waste, characterization of solid waste, physical and chemical properties of solid waste, Hierarchy of solid waste management, solid waste management rules- 2016.

With effect from the Academic Year 2024-25 **UNIT- II:** Storage of solid waste, Collection of Solid Waste: Primary and secondary collection, type of waste collection systems- Hauled and Stationary collection system, Waste handling and Processing: unit operations used for separation and processing, materials recovery, Transfer and Transport of solid waste, transfer station.

**UNIT-III:** Solid waste transformation:aerobic and anaerobic composting, combustion, Thermal conversion- Incineration and pyrolysis system. Energy recovery systems, Solid waste disposal- Landfills: Site selection, method, drainage and leachate collection systems, requirements and technical solutions.

**UNIT–IV:** Definition and identification of hazardous wastes, toxicology principles, sources and characteristics, hazardous wastes in Municipal Waste, Hazardous waste management, Introduction of Biomedical waste and E-waste, Hazardous waste regulations.

**UNIT–V:** Integrated solid waste management, Overview of solid waste management practices- National and International-Case studies, solid waste management practices adopted in industries- overview and case studies. Technological advancements in solid waste management.

### Sensors for Engineering Applications (General Pool: Open Elective - II)

SYLLABUS FOR B.E. IV - SEMESTER (Civil, CSE, CSE (AI&ML) EEE, IT & Mech.)

L:T:P (Hrs./week) : 3:0:0	SEE Marks : 60	Course Code: U230E410EC
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
1. Understand Sensor	Upon completion of the course, students will be
Principles and	able to
Classification	1. Understand the fundamental principles of
2. Analyzing Sensor	sensors and transducers and their
Characteristics and	importance in various engineering
Response	applications.
3. Exploring Different	2. Demonstrate various mechanical sensors
Types of Sensors	used for measuring displacement,
4. Understanding	acceleration, force, fluid flow, level, pressure,
Environmental Factors	and stress.
and Sensor Reliability	3. Explain the working principles and
5. Explore the	applications of thermal and optical sensors.
applications of sensors	4. Comprehend the principles and applications
in various engineering	of magnetic sensors and acoustic sensors.
fields	5. Explore electrical sensors, and high-
	frequency sensors and their use in various
	engineering applications.

### UNIT - I

**Introduction to sensors and transducers**. Need for sensors in the modern world. Different fields of sensors based on the stimuli - various schematics for active and passive sensors. Static and dynamic characteristics of sensors - zero, I, and II order sensors – Response to impulse, step, ramp, and sinusoidal inputs. Environmental factors and reliability of sensors.

### UNIT – II

**Mechanical Sensors** Displacement - acceleration and force – the flow of fluids - level indicators - pressure in fluids - stress in solids. Typical sensors - wire and film strain gauge, anemometers, piezoelectric and magneto strictive accelerometers, potential metric sensors, LVDT.

### UNIT – III

**Thermal and Optical Sensors** temperature – temperature difference – heat quantity. Thermometers for different situations – thermocouples thermistors – color pyrometry. light intensity - wavelength and color - light dependent resistors, photodiode, phototransistor, CCD, CMOS sensors. Radiation intensity, particle counter – Gieger Muller courter (gas based), Hallide radiation detectors.

### UNIT – IV

**Magnetic and Acoustic Sensors** magnetic field, magnetic flux density – magneto resistors, Hall sensors, superconducting squids. Intensity of sound, frequency of sound in various media, various forms of microphones, piezoelectric sensors.

### UNIT – V

**Electrical and High-Frequency Sensors** conventional volt and ammeters, high current sensors, (current transformers), high voltage sensors, High power sensors. High frequency sensors like microwave frequency sensors, wavelength measuring sensors. MEMs and MEM based sensors.

### Lab Experiments:

- 1. Measurement of displacement, and velocity with Pmod ACL with 3-axis Digital Accelerometer.
- 2. Sense the temperature with Pmod TMP3 with Ambient Temperature sensor.
- 3. Sense the ambient light with Pmod ALS with an Ambient light sensor.
- 4. Characteristics of photocell using myRIO with Photocell, API PDV-P9203.
- 5. Study of IR range sensor to measure the distance between the sensor and reflective target using IR range finder GP2Y0A21YK0F
- 6. Working principle of Hall effect using US1881 Hall-effect latch.
- 7. Study of acoustic sensor, to record audio signals and to monitor acoustic level using Chenyum CY-502 computer microphone.
- 8. Estimate the range for a given IR and ultrasonic sensor using QRB1134 IR sensors and MAXSONAR ultrasonic sensor.

### Learning Resources :

- 1. Doebelin, "Measurement Systems: Application and Design", McGraw Hill Kogakusha Ltd.
- 2. Julian W. Gardner, Vijay K. Varadan, Osama O. Awadelkarim "Microsensors, MEMS and Smart Devices", New York: Wiley, 2001.
- 3. Henry Bolte, "Sensors A Comprehensive Sensors", John Wiley.

	base band signal.
	3. Analyze various pulse analog and pulse
	digital ModulationTechniques.
	4. Understand the transmission of binary
	data in communication systems.
	5. Estimate information content in a system

#### UNIT - I

**Amplitude Modulation:** Introduction to Modulation, Need for Modulation, Modulation index, Side bands, AM Power, Double Side Band Suppressed Carrier Modulation, Single Side Band Modulation, Vestigial Side Band Modulation, AM demodulation, Frequency Division Multiplexing,

Lab Activity: Generation of AM using MATLAB and Simulink.

#### UNIT - II

**Angle Modulation:** Angle Modulation fundamentals, Frequency Modulation – Modulation index and sidebands, Narrowband FM, Wideband FM, Principles of Phase Modulation, FM demodulation

Lab Activity: Generation of FM signals using MATLAB and Simulink.

### UNIT - III

**Signal Sampling and Analog Pulse Communication:** Ideal Sampling, Pulse Amplitude Modulation, Pulse Width Modulation, Pulse Position Modulation.

**Digital Communication Techniques:** Quantization, Data Conversion, Time Division Multiplexing, Pulse Code Modulation, Delta Modulation.

Lab Activity: Demonstration of Sampling using MATLAB.

#### UNIT - IV

**Transmission of Binary Data in Communication Systems:** Digital Codes, Principles of Digital Transmission, ASK FSK, BPSK

Lab activity: Demonstration of ASK and BPSK using SIMULINK.

### UNIT - V

**Information Theory**: Uncertainty, Information and entropy. Discrete memory less channels

Source Coding Techniques: Shannon-Fano coding, Huffman Coding

Lab activity: Entropy calculations using MATLAB

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable the	On completion of the course, students
students to:	will be able to
To impart the basics of solar	1. Compare different energy resources.
energy harnessing and solar panel and array.	<ol> <li>Identify and choose proper type of meter for solar radiation measurement.</li> <li>Use proper solar thermal system</li> </ol>
	<ul> <li>according to the load requirements.</li> <li>4. Categorize and compare photovoltaic cells.</li> <li>5. Apply the knowledge of solar</li> </ul>
	energy.

#### Unit – I

**Fundamentals of Energy Sources:** Oil crisis of 1973, Classifications of Energy Resources, Importance of Non-conventional energy sources, Advantagesdisadvantages and salient features of Non-conventional energy sources.

#### Unit – II

**Solar Energy Basics:** Sun as a source of energy, the Earth, Radiation Spectrums, Extraterrestrial and Terrestrial Radiations, Depletion of solar Radiation, Pyranometer, Pyrheliometer, Sunshine Recorder.

#### Unit – III

**Solar Thermal Systems:** Solar Collectors, Solar Water Heater, Solar Passive space – heating and cooling systems, Solar Cookers, Solar furnaces, Solar thermal water pump, Vapour compression refrigeration and Solar pond Electric power plant.

### Unit – IV

**Solar Photovoltaic Systems:** Solar Cell fundamentals, Cell characteristics, Cell classification, Module, Panel and Array, Maximizing the Solar PV output and load matching, MPPT.

### Unit – V

**Solar PV systems & Applications:** Solar PV system classification - Stand-Alone Solar PV system and Grid-Interactive Solar PV system. Applications -Water Pumping, lighting, medical refrigeration, village power and Telecommunication.

Instruction :3Hours /week	SEE Marks : 60	Course Code : U23OE410ME
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
To develop the fundamental knowledge and skills required to	1. Analyze the kinematics of robotic systems and apply them to solve real world problems
analyze, design and control robotic systems	2 Apply differential kinematics and statics concepts to design and control robotic systems
	3 Analyze the dynamics of serial manipulators using lagrangian and Newton-Euler mechanics
	4 Develop motion and force control strategies for robotic systems using feedback control techniques
	5 Generate and analyze robot trajectories for various applications

### UNIT-I

#### Robot Kinematics

Forward Kinematics: Forward/direct kinematic analysis of serial manipulators.

Inverse Kinematics: General properties of inverse kinematic solution. Inverse kinematics of serial RR planar manipulators.

#### UNIT-II

#### **Differential Kinematics**

Linear and angular velocity of links, Velocity propagation, Manipulator Jacobian for serial manipulators, Jacobian Singularities.

#### UNIT-III

**Static Analysis:** Force and moment balance, Jacobian in statics. **Dynamics of serial manipulators** 

Lagrangian formulation for equations of motion for RP, RR serial manipulators,

### Unit-IV

#### Dynamics of serial manipulators

Recursive dynamics using Newton-Euler formulation of RP and RR serial manipulator.

#### UNIT-V

#### **Trajectory Generation**

**Joint-Space Techniques:** Cubic Polynomial Trajectories, Linear Segments with Parabolic Blends-without and with via points

**Cartesian-Space Techniques:** Straight line path, Circular Path, Position Planning, Orientation Planning.

Instruction :3Hrs /week	SEE Marks: 60	Course Code: U230E420ME
Credits :3	CIE Marks: 40	Duration of SEE: 3 Hours

Course Objectives	Course Outcomes
The objectives of this course	On completion of the course, the student
are to:	will be able to:
	1. Apply optimization in multi disciplinary areas
understand the application of	through linear programming under different
mathematics for real time	working conditions.
problem solving to LPP, sensitivity	2. Analyze linear programming for a dynamic
analysis under set of constraints,	changes of a customer requirements to suit
applying mathematical techniques	various Organizations.
to solve transportation problem	3. Reduce total cost to apply for transportation
and assignment problems,	techniques for the transshipment of Goods
applying time value money and	and products for a product based industry.
ignoring the same to find the	4. Estimate the time for replacement of a
optimal replacement of machines,	machine by considering or ignoring time
applying Johnsons rules to find	value of money using individual/group
the best sequence to minimize	replacement policy.
elapsed time and minimum no of	5. Estimate elapsed time for sequencing
servers to minimize waiting time	problem processed through different
of the customers and optimal	machines. Minimize waiting time of the
utilisation of servers.	customer and optimization of no. of servers.

#### UNIT – I

Introduction: Definition and scope of operations research.

**Linear programming:** Introduction, Formulation of linear programming problems, graphical method of solving LP problem, Simplex method, maximization and minimization, degeneracy in LPP, unbounded and infeasible solutions. Introduction of software to solve LPP.

#### UNIT – II

**Duality:** Definition, Relationship between optimal primal and dual solutions. Economic interpretation, Post optimal analysis (restricted to variation of resources i.e., RHS), Dual simplex method.

### UNIT-III

**Transportation model:** Finding an initial feasible solution– north west corner method, least cost method, Vogel's approximation method, finding the optimal solution, optimal solution by stepping stone and MODI methods, special cases in transportation problems – Unbalanced transportation problem.

**Assignment Problem**: Hungarian method of assignment problem, maximization in assignment problem, unbalanced problem, problems with restrictions, travelling salesman problems.

### UNIT-IV

**Replacement models:** Introduction, replacement of items that deteriorate ignoring change in money value, replacement of items that deteriorate considering change in money value with time, replacement of items that fail suddenly – individual replacement policy, group replacement policy.

**Game theory:** Introduction, 2 person zero sum games, maximin– minimax principle, principle of dominance, solution for mixed strategy problems graphical method for 2 x n and m x 2 games.

### UNIT-V

**Sequencing models**: Introduction, general assumptions, processing n jobs through 2 machines, processing 'n' jobs through m machines processing 2 jobs through m machines.

**Queuing theory:** Introduction, single channel – poission arrivals – exponential service times with infinite population and finite population.

SYLLABUS FOR B.E. - IV Semester

Instruction : 3 Hours	SEE : 60	Course code : U23OE020EH
Credits : 3	CIE : 40	Duration of SEE : 3 Hours

COU	COURSE OBJECTIVES		URSE OUTCOMES
The course will enable the learners		At the end of the course the	
to:		lea	rners will be able to: -
1.	Understand the principles and	1.	Write effective reports.
	mechanics of technical writing for	2.	Articulate business
	students of engineering.		correspondences based on
2.	Identify different kinds of business		need.
	correspondences and the dos and	3.	Make persuasive
	don'ts for each of them.		presentations.
3.	Make effective presentations as	4.	Design their videos CVs.
	part of today's workplace	5.	Write papers ranging from
	demands.		process description and
4.	Recognize the need for Video and		feasibility reports to research
	Written CVs with focus on specific		projects, project proposals,
	elements.		and statement of purpose
5.	Comprehend skills associated with		
	technical writing and understand		
	different papers ranging from		
	process description and feasibility		
	reports to research projects,		
	project proposals, and SOPs		

#### UNIT 1: FORMAL & INFORMAL TECHNICAL REPORTS

- 1.1 Informal Report Formats
- 1.2 Project and Research Reports
- 1.3 Formal Report Components, Feasibility Reports, Evaluation reports
- 1.4 Analytical and Informational reports
- 1.5 Executive summaries.

## UNIT 2: BUSINESS CORRESPONDENCE

- 2.1 Electronic communication
- 2.2 Effective emails
- 2.3 Instant and text messaging guidelines

### UNIT 3: PROFESSIONAL PRESENTATIONS

- 3.1 Paper presentations & Poster presentations
- 3.2 PowerPoint presentations
- 3.3 Storyboard writing

### UNIT 4: RESUME & CVs

- 4.1 Technical Resume
- 4.2 Cover letter, resume format
- 4.3 Video CVs

### UNIT 5: WRITING PROPOSALS & SOPs

- 5.1 Types of proposals
- 5.2 Request for proposals
- 5.3 Stating your objective.

### METHODOLOGY

- Case Studies
- Demonstration
- Presentations
- Expert lectures
- Writing and Audio-visual lessons

(Open Elective-II) SYLLABUS FOR B.E. - IV Semester

Instruction : 3 Hours	SEE : 60	Course code: U23OE430EH
Credits : 3	CIE : 40	Duration of SEE : 3 Hours

COL	IRSE OBJECTIVES	CO	URSE OUTCOMES	
The	The course will enable the		At the end of the course the	
lear	ners to:	lea	rners will be able to: -	
1.	Identify the core skills	1.	Analyse and compare techniques	
	associated with critical		for comparing alternate solutions	
	thinking.			
2.	Comprehend the various	2.	Demonstrate the difference	
	techniques of critical thinking		between deductive and inductive	
3.	Evaluate data and draw		reasoning and construct logically	
	insights from it to make the		sound arguments	
	right decisions	3.	Check for accuracy of data and use	
4.	Understand where to look for		it as a tool for problem solving	
	bias and assumptions in	4.	Evaluate, identify and distinguish	
	problem		between relevant and irrelevant	
5.	Understand structure,		information to formulate a thesis	
	standards and ethics of critical		or hypothesis.	
	writing	5.	Employ evidence and information	
	-		effectively	

#### UNIT 1: COMPONENTS OF CRITICAL THINKING

- 1.1 Applying Reason
- 1.2 Open Mindedness
- 1.3 Analysis
- 1.4 Logic

### UNIT 2: NON-LINEAR THINKING

- 2.1 Step out of your Comfort Zone
- 2.2 Don't Jump to Conclusions
- 2.3 Expect and Initiate Change
- 2.4 Being Ready to Adapt

### UNIT 3: LOGICAL THINKING

- 3.1 Ask the Right Questions
- 3.2 Organize Data
- 3.3 Evaluate Information
- 3.4 Draw Conclusions

### **UNIT 4: INFER MEANING FROM INFORMATIVE TEXTS**

- 4.1 Making Assumptions
- 4.2 Watch out for Bias
- 4.3 Ask Clarifying Questions
- 4.4 SWOT Analysis

### UNIT 5: PROBLEM SOLVING

- 5.1 Introduction to Problem Solving Changing Your Perspective
- 5.2 Limitations of Point of View
- 5.3 Considering others viewpoints

### METHODOLOGY

- Case Studies
- Demonstration
- Presentations
- Expert lectures
- Writing and Audio-visual lessons

# NUMERICAL METHODS

(Open Elective-II)

SYLLABUS FOR B.E.IV-SEMESTER

L:T:P(Hrs/week):3:0:0	SEE Marks:60	Course Code: U23OE410MA
Credits :03	CIE Marks:40	Duration of SEE:03Hours

	COURSE OBJECTIVES	COURSE OUTCOMES
The to:	e course will enable the students	At the end of the course students will be able to:
1.	Study the various numerical methods to solve Algebraic and Transcendental equations.	<ol> <li>Apply the numerical methods to solve Algebraic and Transcendental equations which</li> </ol>
2.	Understand the methods to solve linear system of equations.	cannot be solved by traditional algebraic methods
3.	Understand the numerical methods in interpolation and extrapolation.	<ol> <li>Solve the linear system of equations using direct and</li> </ol>
4.	Understand the numerical methods in interpolation using central differences.	iteration methods. 3. Use the various numerical methods in interpolation and
5.	Understand the numerical methods in solving ordinary differential equations.	<ul> <li>extrapolation.</li> <li>4. Use the various numerical methods in interpolation using central differences.</li> <li>5. Find the numerical solutions of ordinary differential equations.</li> </ul>

### Unit – I: (8 Hours)

### Solution of Algebraic and Transcendental equations:

Intermediate value property of equations - Solution of Algebraic and Transcendental equations: Bisection method - Newton-Raphson method - Regula-Falsi method.

### Unit – II: (8 Hours)

### Solution of linear system of equations:

Direct methods - Gauss elimination method - Factorization method - Iterative methods: Jacobi's method – Gauss-Seidel method - III-conditioned system of equations.

#### Unit – III: (8 Hours) Numerical differences-I

Introduction to finite differences - Interpolation- Newton's Forward and Backward Interpolation Formulae - Interpolation with unequal intervals - Lagrange's Interpolation Formula - Divided differences - Newton's divided difference formula.

# Unit – IV: (8 Hours)

### Numerical differences-II

Central differences interpolation - Gauss's forwards and backward difference formulae - Stiriling's formula - Bessel's formula.

### Unit – V: (8 Hours)

### Numerical Solutions of Ordinary Differential Equations

Numerical Solutions of Ordinary Differential Equations: Taylor's Series Method - Euler's Method - Modified Euler's Method – Runge-Kutta of 4th order (without proofs).

### Text Books:

- 1. Numerical methods in engineering and science by B.S.Grewal, Khanna publishers

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable the students to:	At the end of the course students will be able to:
<ol> <li>Study the concept of Groups, Finite Groups, Subgroups, Cyclic Groups and their properties.</li> <li>Understand Isomorphism – Automorphisms of groups and their properties.</li> <li>Learn group Homomorphisms and related concepts.</li> <li>Acquire knowledge of Rings, Integral domains and Fields, External and Internal direct</li> </ol>	<ol> <li>Solve the problems on Groups and will be equipped to apply them in applications like robotics, computer vision, computer graphics and medical image analysis</li> <li>Implement the concepts of automorphism in developing encoding and decoding tools of Cryptography</li> <li>Apply homomorphisms in the study of formal languages, automata theory, and compiler design.</li> </ol>
products.	4. Use the knowledge of Rings, Integral domains and Fields in coding
5. <b>Identify</b> Ring Homomorphisms, properties and polynomial rings	theory.
	<ol> <li>Compute the programming of modern computer algebra algorithms using ring homomorphisms.</li> </ol>

#### Unit-I: Groups (8 classes)

Groups – Definition, Elementary properties of Groups, Finite Groups, Subgroups, Cyclic Groups – Properties of Cyclic Groups, Classification of Subgroups of Cyclic Group.

### Unit-II:

### Group Isomorphisms (8 classes)

Isomorphism – Definition, Properties, Automorphisms, Cosets and Lagrange's theorem-properties of cosets, Lagrange's theorem.

#### Unit-III:

### Group Homomorphisms (08 classes)

External Direct Products - Definition, Properties, Factor Groups and Normal Subgroups, Internal Direct Products, Group Homomorphisms – Definition, Properties.

#### Unit-IV:

### Rings (8 classes)

Rings, Properties of Rings, Subrings, Integral Domains and Fields Ring Homomorphisms and Ideals, Prime and Maximal Ideals.

### Unit-V:

### Ring Homomorphisms (8 classes)

Properties of Ring Homomorphisms, Polynomials - Polynomial Rings, the Division Algorithm.

COURSE OBJECTIVES The course will enable the learners to:		COURSE OUTCOMES At the end of the course				
1.	<ol> <li>Students will be trained to enhance their employability skills.</li> </ol>		the learners will be able to: -			
2.	Students will be introduced to higher order thinking and problem solving skills in the following areas - Arithmetic Ability, Numerical Ability and General Reasoning.	1.	Solve questions in the mentioned areas using shortcuts and smart methods.			
3.	Students will be trained to work systematically with speed and accuracy while problem solving.	2.	Understand the fundamentals concept of Aptitude skills.			
4.	Students will be trained to apply concepts like percentages and averages to solve complex problems.	3. 4.	Perform calculations with speed and accuracy. Solve complex problems			
5.		5.	using basic concepts. Use shortcuts with ease for effective problem solving.			

### UNIT 1

#### QUANTITATIVE APTITUDE- ARITHMETIC ABILITY ADVANCED -1

- 1.1 Time speed and distance
- 1.2 Boats and Streams
- 1.3 Problems on trains

### UNIT 2 REASONING ABILITY- LOGICAL REASONING

- 2.1 Seating Arrangements- Linear; Circular; Complex
- 2.2 Venn diagrams

- 2.3 Syllogism
- 2.4 Cubes & Cuboids
- 2.5 Dices

#### UNIT 3 REASONING ABILITY- NON VERBAL REASONING

- 3.1 Figure Series
- 3.2 Directions
- 3.3 Clocks
- 3.4 Calendars

# UNIT 4

# QUANTITATIVE APTITUDE- ARITHMETIC ABILITY ADVANCED -2

- 4.1 Mensuration Part -1
- 4.2 Mensuration Part -2
- 4.3 Logarithms

### UNIT 5

### QUANTITATIVE APTITUDE- ENGINEERING MATHEMATICS

- 5.1 Permutations and combinations
- 5.2 Probability

### Learning Resources :

L:T:P (Hrs./week):1:0:0SEE Marks : 40Course Code: UI23PE410CSCredits : 1CIE Marks : 30Duration of SEE : 2 Hours

COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
<ol> <li>Understand the Nonlinear data structures and their applications.</li> <li>Prepare the students for the contests relative to the concepts learnt.</li> <li>Build confidence in coding using Non Linear Data structures</li> <li>Leverage the Industry Standards of the DBMS concepts</li> </ol>	<ol> <li>Lean non-linear data structures with various applications that are essential for solving problems which involve complex relationships, efficient searching, and hierarchical organization.</li> <li>Solve scenario based problems using Tree Data structures</li> <li>Learn and apply greedy algorithms for efficient solutions to complex problems.</li> <li>Learn and apply database concepts for designing efficient, reliable, and well-structured databases that meet the needs of modern applications.</li> </ol>

**Problem Solving through Non-Linear Data structures – Trees I** Problem solving approaches using Non-linear data structures, Coding problems on the height of a binary tree, Size of a binary tree, Tree order traversals, Problem Solving on Binary Trees, Examples, Practice problems.

### Problem Solving through Non-Linear Data structures – Trees II

Time comparison and analysis on Binary Search Trees & Coding problems, Search/probe sequence validation, Significance of height balancing the tree, Examples, Practice problems.

## Problem Solving implementing Algorithms - Greedy Methods II

Algorithmic Thinking, Selection as Greedy Strategy, Heaps Min and Max, Priority Queues, Greedy Coin change solution, Examples, Practice problems.

# Problem Solving implementing Algorithms - Greedy Methods Ⅱ

Fractional Knapsack, Sequencing jobs with deadlines, Activity selection, Examples, Practice problems.

## Problem Solving using DBMS I

Industry Standards of leveraging DBMS concepts: SQL Queries, Entity Relationship Models, Question, and answers.

## Problem Solving using DBMS II

Industry Standards of leveraging DBMS concepts: Query Optimization, Transactions & Concurrency, Normalization, case studies, Question and answers

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P (Hrs./week):0:0:2	SEE Marks:50	Course Code: UI23PC421CS
Credits : 1	CIE Marks:30	Duration of SEE : 3 Hours

		COURSE OUTCOMES		
	COURSE OBJECTIVES	On completion of the course,		
		students will be able to		
1	Apply SQL commands on a database.	<ol> <li>Design and implement a database schema.</li> </ol>		
2	Develop an application using forms, reports and PL/SQL.	2 Apply DDL, DML, DCL and TCL commands on a database.		
		3 Apply No-SQL concepts for given database.		
		4 Implement PL/SQL programs for creating stored procedures, cursors & triggers.		
		5 Design and implement an application using forms and reports.		

### Programming Exercise:

## I. SQL

- 1. Creation of database tables without constraints.
- 2. Creating tables using combination of constraints.
- 3. Usage of Stored Functions.
- 4. Exercising all types of Joins.
- 5. Exercising complex Queries.
- 6. Experiments on No-SQL.

## II. PL/SQL

- 1. Demonstration of Blocks, Cursors, functions and Packages.
- 2. Demonstrate Exception Handling.
- 3. Usage of Triggers to perform operation on Single and Multiple Tables.
- 4. PL/SQL Procedures for data validation.

- 1. Ivan Bayross, SQL, PL/SQL, The Programming Language of Oracle,4th Edition, PBP Publications.
- 2. Sadalage, P. & Fowler, NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence, Wiley Publications,1st Edition ,2019.
- 3. Rick F Van der Lans, Introduction to SQL, 4<sup>th</sup> Edition (2007), Pearson Education.
- 4. Benjamin Rosenzweig Elena Silvestrova, Oracle PL/SQL by Example, 3rdEdition(2004), Person Education.
- 5. Albert Lulushi, Oracle Forms Developer's Handbook, 1st Edition (2006), Pearson Education.

SYLLABUS FOR B.E. IV-SEMESTER

L:T:P (Hrs./week):0:0:2	SEE Marks:50	Course Code: UI23PC431CS
Credits : 1	CIE Marks:30	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	COURSE OUTCOMES On completion of the course, student will be able to			
1	Apply system calls for process management and file management	1	Implement operations on Files and Process by using system calls		
2	Implement techniques related to CPU Scheduling, Main memory management, Process synchronization and deadlock avoidance & detection	2 3 4 5	Implement CPU Scheduling algorithms Implement Page Replacement techniques Design and implement solutions for Inter-Process Communication Implement Kernel module programs		

## **Programming Exercise:**

- 1. Building & Booting of Operating system, Disk partitioning and Dual boot of OS
- 2. Write shell programs to implement a given task.
- 3. Implement system calls for File system management.
- 4. Implement system calls for Process management.
- 5. Write C programs to implement CPU scheduling algorithms (FCSF, SJF, Priority, RR, Multi level)
- 6. Write C programs to implement Page Replacement algorithms.
- 7. Implement Inter-process communication using
  - i. Pipes (by using pipe system call)
  - ii. Message Queues ( by using msgget, msgsnd, msgrcv system calls)

- iii. Shared Memory (by using shmget, shmat, shmdt system calls)
- 8. Implement Process Synchronization for Bounded buffer, Readers-Writers and Dining philosophers' problems using Semaphores. (by using semget, semop system calls)
- Study pthreads and implement a program which shows the performance improvement in using threads as compared with process.( Examples like Matrix Multiplication, Hyper quicksort, Merge sort, Traveling Sales Person problem )
- 10. Write a Linux Kernel Module for Task Information extraction.
- 11. Write a Linux Kernel Module for Listing Tasks.

L:T:P (Hrs./week):0:0:2	SEE Marks : 50	Course Code: UI23PC441CS
Credits : 1	CIE Marks : 30	Duration of SEE : 3 Hours

	COURSE OBJECTIVES	<b>COURSE OUTCOMES</b> On completion of the course, students will be able to
1	Implement solutions for the given problems using divide and conquer	<ol> <li>Implement searching, sorting and hashing using basic data structures.</li> </ol>
2	Implement solutions for the given problems using greedy and dynamic programming	2 Apply divide and conquer strategy to implement algorithm for a given problem.
3	Implement solutions for the given problems using backtracking and branch and bound.	3 Implement an algorithm for a given problem using Greedy design strategy
		4 Apply dynamic programming to implement algorithms for a set of problems.
		5 Implement algorithms for set of problems using backtracking and branch and bound.

## Programming Exercise:

- 1. Implementation of Merge Sort, Quick Sort, Heap Sort, Binary Search and Hashing.
- 2. Implementation of Traversal on Graphs.
- 3. Implementation of Traversal on Trees and DAG.
- 4. Implement Single source shortest path algorithm.
- 5. Implement Minimum cost spanning tree algorithm.
- 6. Implement fractional Knapsack algorithm.
- 7. Implement Optimal merge patterns -Huffman encoding algorithm.
- 8. Implement Matrix-chain multiplication algorithm with dynamic programming.

- 9. Implement LCS algorithm and print Longest common subsequence.
- 10. Implement All-pairs shortest path algorithm.
- 11. Implement 0/1 Knapsack algorithm.
- 12. Implement multi-stage graph.
- 13. Implementation of N-queens problem with back tracking.
- 14. Implement Graph coloring problem with back tracking.
- 15. Implement TSP by branch and bound.
- 16. Implement 0/1 knapsack by branch and bound.
