

**VASAVI COLLEGE OF ENGINEERING
(AUTONOMOUS)**

Ibrahimbagh, Hyderabad-31
Approved by A.I.C.T.E., New Delhi and
Affiliated to Osmania University, Hyderabad-07

**Sponsored
by
VASAVI ACADEMY OF EDUCATION
Hyderabad**

**SCHEME OF INSTRUCTION AND SYLLABI UNDER CBCS FOR
M.E. (ECE)
COMMUNICATION ENGINEERING AND SIGNAL PROCESSING
(CE&SP)**

**I TO IV SEMESTERS
With effect from 2020-22
(For the batch admitted in 2020-21)**

(R-20)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
Phones: +91-40-23146040, 23146041
Fax: +91-40-23146090

Institute Vision

Striving for a symbiosis of technological excellence and human values

Institute Mission

To arm young brains with competitive technology and nurture holistic development of the individuals for a better tomorrow

Department Vision

Striving for excellence in teaching, training and research in the areas of Electronics and Communication Engineering

Department Mission

To inculcate a spirit of scientific temper and analytical thinking, and train the students in contemporary technologies in Electronics & Communication Engineering to meet the needs of the industry and society with ethical values.

Program Educational Objectives (PEO) :

PG – M.E (CE&SP) : Communication Engineering and Signal Processing

PEO1: Graduates will be able to acquire indepth knowledge in the field of Communication Engineering and Signal Processing for designing and implementing systems employing latest techniques and tools

PEO2: Graduates will be able to carry out research independently and write & present a substantial research report

PEO3: Graduates will be able to demonstrate effective communication skills and leadership qualities with ethical attitude in broad societal context while working in a multiple disciplinary environment

Program Outcomes (PO) :

PG – M.E (CE&SP) : Communication Engineering and Signal Processing:
Graduates will have

PO1: An ability to independently carry out research /investigation and development work to solve practical problems

PO2: An ability to write and present a substantial technical report/document

PO3: An ability to demonstrate a degree of mastery over the area of Advanced Communication Engineering and Signal Processing.

PO4: An ability to apply appropriate techniques and modern engineering tools in the design and implementation of Communication and signal processing systems

PO5: An ability to apply engineering and Management principles as a member and leader in a team, to manage projects in multi-disciplinary environment with lifelong learning capabilities

VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS)
IBRAHIMBAGH, HYDERABAD – 500 031

DEPARTMENT OF HUMANITIES AND SOCIAL SCIENCES

Skill Development Course-I: Communication Skills in English

SYLLABUS FOR M.E. - I SEMESTER

L:T:P (Hrs./week): 1:0:0	SEE Marks: 40	Course Code: PII20HS110EH
Credits : 1	CIE Marks: 30	Duration of SEE : 2 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
This course will enable the students to: 1. involve in the content for all the above mentioned four skills in teaching English and to get students proficient in both receptive and productive skills	On completion of the course the students will be able to: 1. Make effective presentations 2. Successfully attempt versant, AMCAT and secure better placements 3. Perform better in Interviews

UNIT – I : Remedial English: Delightful Descriptions

Describing Past, Present and Future Events.

UNIT - II: Developing Conversational Skills

Exchange of pleasantries, Exchange facts and opinions, Using relevant vocabulary.

UNIT - III: Contextual Conversations:

Ask for Information, Give Information, Convey bad news, show appreciation

UNIT - IV: Business English: Professional Communication:

Concise Cogent Communication, Active Listening, Interact, Interpret and Respond. **Expositions and Discussions:** Organization, Key Points, Differing Opinions, Logical conclusions. **Effective Writing Skills:** Structure, Rough Draft, Improvisations and Final Draft for Emails, paragraphs and Essays. **High Impact Presentations:** Structure, Content, Review, Delivery

UNIT - V: Industry Orientation and Interview Preparation

Interview Preparation– Fundamental Principles of Interviewing, Resume Preparation, Types of Interviews, General Preparations for an Interview. Corporate Survival skills: Personal accountability, Goal Setting, Business Etiquette, Team Work

Learning Resources:

1. Business Communication, by Hory Shankar Mukerjee, Oxford/2013
2. Managing Soft Skills for Personality Development by B.N.Gosh, Tata McGraw-Hill/ 2012
3. Personality Development & Soft Skills by Barun K Mitra, Oxford/2011
4. Murphy, Herta A., Hildebrandt, Herbert W., & Thomas, Jane P., (2008) "Effective Business Communication", Seventh Edition, Tata McGraw Hill, New Delhi
5. Locker, Kitty O., Kaczmarek, Stephen Kyo, (2007), "Business Communication – Building Critical Skills", Tata McGraw Hill, New Delhi
6. Lesikar, Raymond V., & Flatley, Marie E., (2005) "Basic Business Communication – Skills for Empowering the Internet Generation", Tenth Edition, Tata McGraw Hill, New Delhi
7. Raman M., & Singh, P., (2006) "Business Communication", Oxford University Press, New Delhi.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Advanced Digital Signal Processing

Professional Core - I

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PC110EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Review of discrete time signals and systems 2. Design of optimal FIR filters, and IIR filters 3. Multirate Signal Processing fundamentals and design of practical sampling rate converters, and applications 4. Analysis of multirate filter banks and their applications 5. wavelet transforms and digital filter implementation of wavelets and applications 6. Adaptive Filters, LMS and RLS algorithms and Linear Prediction Filters. 7. Different Methods for power Spectrum estimation of signals. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. design FIR and IIR filters 2. understand theory of multirate DSP, and wavelets and capable of designing wavelet filters 3. design adaptive filters 4. design prediction filters and understand solution of normal equations 5. estimate power spectrum of signals using different methods 6. know applications of DSP

UNIT – I

Review of discrete time signals and systems: LTI systems, Discrete convolution, DFT computation using the Goertzel Algorithm, Z-transform, Rational transfer function, Frequency response from poles and zeros of the transfer function.

Digital filters design: Design of Optimal FIR filters, IIR Filters Design using bilinear transformation method, Cascaded and lattice structures of FIR and IIR filters, Finite word length effects in IIR filter, Application examples.

UNIT – II

Multirate DSP: Down sampling, Up sampling, Relation between the Fourier transform of the input and output of the down sampling and up sampling, Representation of decimator and interpolator, Changing the

sampling rate by noninteger factor, Multistage approach to sampling rate conversion, Design of practical sampling rate converters, Polyphase decomposition of decimator and interpolator, Oversampling ADC analysis, Two channel QMF bank structure, Analysis of Two-Channel QMF Bank. Design of perfect reconstruction M-channel filter banks, Tree structured filter banks, Application examples.

UNIT – III

Wavelet transforms: Time frequency representation of signals, short-time Fourier transform (STFT), Scaling functions and wavelets, Discrete wavelet transform (DWT), Multi-resolution analysis (MRA), Wavelet reconstruction, design of decomposition and reconstruction filters for Haar, Daubechies and biorthogonal wavelets, Digital filter implementation of wavelets, Application examples.

UNIT – IV

Adaptive Digital Filters: Adaptive Filter Structures, Minimum mean square criterion, LMS algorithm, Recursive Least Square algorithm, Application Examples.

Linear Prediction & Optimum Linear Filters: Linear prediction, forward-backward linear prediction filters, solution of normal equations, Wiener Filters.

UNIT – V

Power Spectrum Estimation: Nonparametric Methods and parametric Methods for Power Spectrum Estimation, Minimum-variance spectral estimation, Eigen analysis Algorithms for Spectrum Estimation.

Learning Resources:

1. K. Deergha Rao and MNS Swamy, "Digital Signal Processing Theory and Practice", Springer, 2018.
2. Sanjit K. Mitra, "Digital Signal Processing", 3/e, Tata McGraw-Hill Edition, 2006.
3. J.G.Proakis and D.G. Manolakis, " Digital signal processing: Principles, Algorithm and Applications", 4th Edition, Prentice Hall, 2007..
4. S.Haykin, "Adaptive Filter Theory", 4th Edition, Prentice Hall, 2001.
5. Steven M Kay, "Modern Spectral Estimation Theory and Application", Prentice Hall,1988.

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PII20PC120EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Analyze the properties of basic Modulation techniques and apply them to Digital Communication. 2. Apply different types of coding techniques to design the optimum receiver for channels with ISI and AWGN. 3. Design and develop the different types of modulation techniques, equalizer to improve the performance under fading channels for various applications. 4. Understand and appreciate the need of various modulations and spread spectrum techniques. 5. Analyze the performance of spread spectrum systems in the presence of interference. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Explain merits and demerits of different modulation techniques & coding techniques, spread spectrum signals and channel behaviors. 2. Analyze various modulation, equalization, diversity and coding techniques for communication systems. 3. Compare performance of different types of modulation on different wireless application fading channels. 4. Design and demonstrate various modulation/coding equalization techniques and measure their performance. 5. Apply spread spectrum techniques to the baseband signal in the presence of interference to reduce the occurrence of error.

UNIT – I

Review of fundamental concepts and parameters in Digital Communication. Digital modulation schemes, Power spectra of digital modulation signals.

UNIT – II

Performance of carrier modulation schemes : Performance of BPSK and QPSK in AWGN Channel, Performance of Binary FSIC in M-ary PSK in AWGN Channel, Minimum Shift keying (MSK) Modulation, GMSK continuous phase modulation(CPM) schemes.

UNIT – III

Channel characterization and modeling: Optimum receivers for AWGN Channels, Equalization techniques, Orthogonal Frequency Division Multiplexing (OFDM). Carrier Synchronization, Timing synchronization.

UNIT – IV

Introduction to spread spectrum modulation, Direct Sequence modulation, spreading codes, Advantage of CDMA for wireless, Code Synchronization, Code Acquisition and tracking. Channel estimation, Power control, the near-far problem, FEC coding and CDMA, Frequency Hopping spread spectrum, Complex baseband representation of FHSS, slow and fast frequency hopping, Processing gain.

UNIT - V

Spread spectrum as a Multiple access technique: Multi channel and Multi carrier systems; Digital Communication through fading multipath channels; Multi user communications. 'Space diversity on Receiver' technique, MIMO antenna systems, Space time codes for MIMO wireless Communication, Differential space time block codes, SDMA, Smart antennas.

Learning Resources:

Image and Video Processing

Professional Core - III

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PC130EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Understand the basics of image processing system and the concepts of image transforms. 2. Gain knowledge in applying image processing algorithms to enhance images. 3. Gain complete knowledge about image compression and segmentation used in digital image processing 4. Understand representation of digital video in the spatial domain and knowledge about time varying image formation models. 5. Understand principles and methods of 2-D motion estimation for digital video 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Analyze relationship between pixels in images and able to apply proper image transform on digital images for the intended application. 2. Apply filtering operations to remove noise in images and to segment the digital images. 3. Apply proper compression techniques on images to save storage space and to reduce transmission time. 4. Analyze video signals and time-varying image formation models. 5. Analyze 2-D motion estimation of video and video filtering operations.

UNIT – I

Fundamentals of Image Processing and Image Transforms: Basic steps of Image Processing System, Sampling and Quantization of an image, relationship between pixels. Image Transforms: 2 D- Discrete Fourier Transform, Discrete Cosine Transform (DCT), Wavelet Transforms: Continuous Wavelet Transform, Discrete Wavelet Transforms.

UNIT – II

Image Processing Techniques: Image Enhancement: Spatial domain methods: Histogram processing, Fundamentals of Spatial filtering, Smoothing spatial filters, Sharpening spatial filters. Frequency domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, Selective filtering. Image Segmentation: Segmentation

concepts, Point, Line and Edge Detection. Thresholding, Region Based segmentation.

UNIT – III

Image Compression: Image compression fundamentals - Coding Redundancy, Spatial and Temporal redundancy, Compression models: Lossy & Lossless, Huffman coding, Arithmetic coding, LZW coding, Run length coding, Bit plane coding, Transform coding, Predictive coding, Wavelet coding, JPEG Standards.

UNIT – IV

Basic concepts of Video Processing: Analog Video, Digital Video. Time-Varying Image Formation models: Three-Dimensional Motion Models, Geometric Image Formation, Photometric Image Formation, Sampling of Video signals, Filtering operations.

UNIT – V

2-D Motion Estimation: Optical flow, General Methodologies, Pixel Based Motion Estimation, Block- Matching Algorithm, Mesh based Motion Estimation, Global Motion Estimation, Region based Motion Estimation, Multi resolution motion estimation, Waveform based coding, Block based transform coding, Predictive coding, Application of motion estimation in Video coding.

Learning Resources:

1. Gonzaleze and Woods, Digital Image Processing , 3rd ed., Pearson.
2. Yao Wang, Joem Ostermann and Ya–quin Zhang, Video processing and communication, 1st Ed., PH Int.
3. M. Tekalp, Digital Video Processing, Prentice Hall International.

Data and Computer Communication Networks

Professional Elective - I

SYLLABUS FOR M.E. ECE (CE&SP) - I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE110EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Analyze the services and features of the various layers of data networks. 2. Familiarize the student with the basic taxonomy and terminology of the computer networking area. 3. Identify the different types of network topologies and protocols. 4. To understand the evolution of the WAN industry, wireless home networking IEEE 802.11 the PHY layer. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Enumerate the layers of the OSI and TCP/IP models 2. Illustrate how communication works in data networks and the Internet. 3. Understand and build the skills of subnetting and routing mechanisms. 4. Able to understand the Historical overviews of the land industry, evolution of the wan industry, wireless home networking IEEE 802.11 the physical layer, MAC , wireless ATM 5. Analyze the features and operations of various application layer protocols such as SNMP, SIP, and H.323 and security in the internet.

UNIT – I

Data Communications and Networks Overview: Data Communications Model Communication Tasks, Basic concepts of Networking and Switching, Networking configurations, Protocols and Architecture, Key Elements of a Protocol, Protocols in Simplified Architecture, Protocol Data Units (PDU), Operation of a Protocol Architecture, Standardized Protocol Architectures, OSI and TCP/IP Architectures, Comparisons between OSI and TCP/IP, TCP/IP Addressing Concepts, concepts of Frequency, Spectrum and Bandwidth, Modem, Codec.

UNIT – II

Line Configuration, Interfacing, Characteristics of Physical Layer Interface, Flow Control, Sliding Window Flow Control, Error control, CRC, ARQ Protocols, Data Link Control, Bit stuffing, HDLC Operation; Hierarchy of FDM schemes, WDM Operation, TDM Link Control, Hierarchy of TDM, DS-

1 Transmission Format, SONET/SDH Frame Formats. Asymmetrical Digital Subscriber Line, xDSL.

UNIT – III

Circuit Switching and Packet Switching: Circuit Switching concepts, Circuit Switching applications, Circuit Switch Elements, Three Stage Space Division Switch, Blocking and Non-blocking switching, Time Division Switching, Control Signaling Functions, In Channel Signaling, Common Channel Signaling, Introduction to Signaling System Number 7 (SS7), Packet Switching Principles, Datagram and Virtual Circuit switching, Effects of variable packet size, X.25, X.25 Protocol Control Information. Routing: Routing in Circuit Switched Network, Routing in Packet Switched Network, Routing Strategies, Least Cost Algorithms, Bellman-Ford Algorithm.

UNIT – IV

LAN Architecture. Topologies, Choice of Topology, Ring and Star Usage, MAC and LLC, Generic MAC Frame Format, Bridge, Bridge Operation, Bridges and LANs with Alternative Routes, Spanning Tree, Loop resolution in bridges, Hubs, Two Level Star Topology, Layer 2 Switches, Wireless LAN, Multi cell Wireless LANs, IEEE 802.11 Architecture, IEEE 802.11 Medium Access Control logic.

UNIT – V

ATM, Architecture of ATM, Congestion Control and Quality of Service in ATM, Internetworking, IPv4, IPv6 comparison, Transport layer protocols, UDP Operation, TCP features, Flow Control, Error Control, Congestion Control, Network Management System, SNMP, SIP, and H.323 architectures, Security in the Internet, IP Security, Firewalls.

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE120EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

Course Objectives	Course Outcomes
<ol style="list-style-type: none"> 1. To demonstrate different positioning systems 2. To explain GPS operation, architecture operating frequencies and orbits. 3. To differentiate between GPS and UTC time. 4. To explain the GPS signal structure 5. To differentiate between various coordinate system 6. To estimate link budget 7. To demonstrate different GPS errors 8. To estimate total electron content (TEC) and VERE 9. To compare different DOPS (Dilution of precision) 10. To demonstrate integration of GPS with other systems 11. To demonstrate GPS data formats. 12. To estimation user position. 13. To demonstrate DGPS principle and errors 14. To understand local and global satellite constellation 15. To differentiate between various augmentation systems. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Demonstrate the different positioning systems 2. Explain GPS operation architecture operating frequencies and orbits. 3. Differentiate between GPS and UTL time. 4. Explain the GPS signal structure 5. Differential between various co-ordinate systems 6. Estimation of Link budget. 7. Demonstrate the different GPS errors. 8. Estimation of total electron content (TEC) and UERE 9. Comparison of different DOPS (Dilution of Precision) 10. Demonstration of GPS integration with other systems 11. Demonstration of GPS data formats 12. Estimation of user position 13. Demonstration of DGPS principles & errors 14. Understanding the local and global satellite constellation 15. Differentiate between various augmentation systems.

UNIT – I

GPS fundamentals: INS, Trilateration, Hyperbolic navigation, Transit, GPS principle of operation, architecture, operating frequencies, orbits, Keplerian elements. Solar and Siderial days, GPS and UTC Time

UNIT – II

GPS Signals: Signal structure, C/A and P-Code, ECEF and ECI coordinate systems and WGS 84 and Indian datums, Important components of receiver and specifications, link budget.

UNIT – III

GPS Error Models: Ionospheric error, Tropospheric error, Ephemeris error, Clock errors, Satellite and receiver instrumental biases, Antenna Phase center variation, multipath; estimation of Total Electron Content (TEC) using dual frequency measurements, Various DOPs, UERE. Spoofing and Anti-spoofing. : Future GPS satellites, new signals and their benefits GPS integration – GPS/GIS, GPS/INS, GPS/pseudolite, GPS/cellular.

UNIT – IV

GPS data processing, DGPS and Applications: RINEX Navigation and Observation formats, Code and carrier phase observables, linear combination and derived observables, Ambiguity resolution, cycle slips, Position estimation. principle of operation of DGPS, architecture and errors,

UNIT – V

Other Constellations and Augmentation systems Other satellite navigation constellations GLONASS and Galileo IRNS System. : Relative advantages of SBAS and GBAS, Wide area augmentation system (WAAS) architecture, GAGAN, EGNOS and MSAS. Local area augmentation system (LAAS) concept.

Spread Spectrum and CDMA Systems

Professional Elective - I

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE130EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Understand the concept of Spread Spectrum and study various types of Spread spectrum sequences and their generation. 2. Understand the principles of Code Division Multiple Access (CDMA) and use of Spread spectrum concept in CDMA 3. Understand the procedure for synchronization of receiver for receiving the Spread spectrum signal. 4. Study the performance of spread spectrum systems in Jamming environment, systems with Forward Error Correction and Multiuser detection in CDMA cellular radio. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Generate various types of Spread spectrum sequences and can simulate CDMA system (Both Transmitter & Receiver). 2. Analyze the performance of spread spectrum signals in the presence of multiple access interference (CDMA context). 3. Illustrate techniques for reducing the impact of interference on spread spectrum signals 4. Implement the features of CDMA and IS-95 systems and its evolution to 3rd generation system 5. Describe techniques for reducing the impact of interference on spread spectrum signals.

UNIT – I

Fundamentals of Spread Spectrum: Introduction to spread spectrum communication, pulse noise jamming, low probability of detection, direct sequence spread spectrum, frequency-hopping and time-hopping spread spectrum systems, correlation functions, spreading sequences- maximal-length sequences, gold codes, Walsh orthogonal codes- properties and generation of sequences Synchronization and Tracking: delay lock and tau-dither loops, coarse synchronization- principles of serial search and match filter techniques.

UNIT – II

Performance Analysis of SS system: Performance of spread spectrum system under AWGN, multi-user Interference, jamming and narrow band interferences

Low probability of intercept methods, optimum intercept receiver for direct sequence spread spectrum, Error probability of DS-CDMA system under AWGN and fading channels, RAKE receiver

UNIT – III

Capacity & Coverage of Spread Spectrum Multiple Access Networks: Basics of spread spectrum multiple access in cellular environments, reverse Link power control, multiple cell pilot tracking, soft and hard handoffs, cell coverage issues with hard and soft handoff, spread spectrum.

UNIT – IV

Control of Spread Spectrum Multiple Access Networks: Multiple access outage, outage with imperfect power control, Erlang capacity of forward and reverse links. Multi-user Detection -MF detector, decorrelating detector, MMSE detector. Interference Cancellation: successive, Parallel Interference Cancellation, performance analysis of multiuser detectors and interference cancellers.

UNIT – V

CDMA Systems: General aspects of CDMA cellular systems, IS-95 standard, Downlink and uplink, Evolution to Third Generation systems, WCDMA and CDMA-2000 standards, Principles of Multicarrier communication, MCCDMA and MC-DS-CDMA.

Learning Resources:

Audio and Speech Signal Processing

Professional Elective - II

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE140EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
1. Understand the anatomy and physiology of acoustic production and perception model. 2. To analyze the speech in time domain and extract various parameters. 3. To study the concept of Homomorphic system and analyze various audio coding techniques with applications.	On completion of the course, students will be able to 1. Model an electrical equivalent of Speech Production System. 2. Extract the LPC coefficients that can be used to synthesize or compress the speech. 3. Design a homomorphic vocoder for coding and decoding of speech. 4. Extract the features for automatic speaker recognition systems 5. Design basic audio coding methods.

UNIT – I

Fundamentals of Digital Speech Processing: Anatomy & Physiology of Speech Organs, The Process of Speech Production, The Acoustic theory of speech production- Uniform lossless tube model, effect of losses in vocal tract, effect of radiation at lips, Digital models for speech signals.

Perception : Anatomical pathways from the Ear to the Perception of Sound, The Peripheral Auditory system, Hair Cell and Auditory Nerve Functions, Properties of the Auditory Nerve. Block schematics of the Peripheral Auditory system.

UNIT – II

Time Domain models for Speech Processing: Introduction – Window considerations, Short time energy, average magnitude, average zero crossing rate, Speech vs Silence discrimination using energy and zero crossing, pitch period estimation using a parallel processing approach, the short time autocorrelation function, average magnitude difference function, pitch period estimation using the autocorrelation function. Linear Predictive Coding (LPC) Analysis : Basic principles of Linear Predictive Analysis : The Autocorrelation Method, The Covariance method, Solution of LPC Equations : Cholesky Decomposition Solution for Covariance

Method, Durbin's Recursive Solution for the Autocorrelation Equations, comparison between the methods of solution of the LPC Analysis Equations, Applications of LPC Parameters : Pitch Detection using LPC Parameters, Formant Analysis using LPC Parameters.

UNIT – III

Homomorphic Speech Processing: Introduction , Homomorphic Systems for Convolution : Properties of the Complex Cepstrum, Computational Considerations , The Complex Cepstrum of Speech, Pitch Detection , Formant Estimation, The Homomorphic Vocoder. Speech Enhancement: Speech enhancement techniques : Single Microphone Approach, Spectral Subtraction, Enhancement by re-synthesis, Comb filter, Wiener filter, Multi Microphone Approach.

UNIT – IV

Automatic Speech Recognition: Basic pattern recognition approaches, parametric representation of Speech, Evaluating the similarity of Speech patterns, Isolated digit Recognition System, Continuous word Recognition system. Elements of HMM, Training & Testing of Speech using HMM. Automatic Speaker Recognition: Recognition techniques, Features that distinguish speakers, MFCC, delta MFCC, Speaker Recognition Systems: Speaker Verification System , Speaker Identification System, Performance Metrics.

UNIT – V

Audio Coding: Lossless Audio Coding, Lossy Audio coding, Psychoacoustics , ISO-MPEG-1 Audio coding , MPEG - 2 Audio coding, MPEG - 2 Advanced Audio Coding, MPEG - 4 Audio Coding.

Learning Resources:

1. Digital Processing of Speech Signals - L.R. Rabiner and S. W. Schafer. Pearson Education.
2. Digital Audio Signal Processing – Udo Zolzer, 2nd Edition, Wiley.
3. Speech & Audio Signal Processing- Ben Gold & Nelson Morgan, 1st Ed., Wiley
4. Discrete Time Speech Signal Processing: Principles and Practice - Thomas F. Quateri, 1st Ed., PE.
5. Digital Processing of Speech Signals. L.R Rabinar and R W Jhaung, 1978, PHI.

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE150EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

Course Objectives	Course Outcomes
<ol style="list-style-type: none"> 1. To introduce students the basic signal processing techniques in analyzing biological signals. 2. To develop the students mathematical, scientific & computational skills related to the field of biomedical signal processing 3. To enhance the ability in formulating problems & designing analysis tools for biological signals. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Knowledgeable of the basic signal processing techniques in analyzing biological signals. 2. To possess the basic mathematical & computational skills necessary to analyse biomedical signals. 3. Formulate and solve basic problems in biomedical signal analysis is enhanced 4. Aware of the complexity of biological signal and the impact, promise of biomedical engineering in understanding these signals. 5. Demonstrate to effectively communicate their ideas in terms of biomedical signal parameters.

UNIT – I

Random Processes: Stationary random process, Ergodicity, Power spectral density and autocorrelation function of random processes. Noise power spectral density analysis, Noise bandwidth and noise figure of systems.

UNIT – II

Data Compression Techniques: Lossy and Lossless data reduction Algorithms. ECG data compression using Turning point, AZTEC, CORTES, Huffman coding, vector quantisation, DICOM Standards

UNIT – III

Cardiological Signal Processing: Pre-processing, QRS Detection Methods, Rhythm analysis, Arrhythmia Detection Algorithms, Automated ECG Analysis, ECG Pattern Recognition. Adaptive Noise Cancelling: Principles of

Adaptive Noise Cancelling, Adaptive Noise Cancelling with the LMS Adaptation Algorithm, Noise Cancelling Method to Enhance ECG Monitoring, Fetal ECG Monitoring.

UNIT - IV

Signal Averaging, Polishing: Mean and trend removal, Prony's method, Prony's Method based on the Least Squares Estimate, Linear prediction, Yule – Walker (Y –W) equations, Analysis of Evoked Potentials.

UNIT – V

Neurological Signal Processing: Modelling of EEG Signals, Detection of spikes and spindles Detection of Alpha, Beta and Gamma Waves. Auto Regressive (A.R.) modelling of seizure EEG. Sleep Stage analysis, Inverse Filtering, Least squares and polynomial modelling.

Learning Resources:

1. Probability, Random Variables & Random Signal Principles – Peyton Z. Peebles, 4th Ed., 2009, TMH.
2. Biomedical Signal Processing- Principles and Techniques - D. C. Reddy, 2005, TMH.
3. Digital Bio Signal Processing - Weitkumat R, 1991, Elsevier.
4. Biomedical Signal Processing - Akay M , IEEE Press.
5. Biomedical Signal Processing -Vol. I Time & Frequency Analysis - Cohen.A, 1986, CRC Press.

Wavelets & Applications

Professional Elective - II

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE160EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

Course Objectives	Course Outcomes
<ol style="list-style-type: none"> 1. To establish the theory necessary to understand & use wavelets and related constructions. 2. Describe various continuous & discrete wavelet transform. 3. Understand the multi resolution analysis and its various applications. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand the terminology that are used in the wavelets literature. 2. Explain the concepts, theory of algorithms behind wavelets from an inter disciplinary perspective that unities harmonic analysis, filter banks & multi resolution analysis 3. Understand how to use the modern signal processing tools using signal spaces, bases, operators & series expansions. 4. Apply wavelets, filter banks and multi resolution techniques to a problem at hand & justify why wavelets provide the right tool. 5. Think critically ask question & apply problem solving techniques.

UNIT – I

Introduction: Stationary and non-stationary signals, Signal representation using basis and frames, Brief introduction to Fourier transform and Short time Fourier transform, Time-frequency analysis, Bases of time frequency: orthogonal, Filter banks, Multi resolution formulation: Wavelets from filters, Classes of wavelets: Haar, Daubechies, bi-orthogonal.

UNIT – II

Continuous Wavelet Transform: Continuous wavelet transform (CWT), Time and frequency resolution of the continuous wavelet transform, Construction of continuous wavelets: Spline, orthonormal, bi-orthonormal, Inverse continuous wavelet transform, Redundancy of CWT, Zoom

property of the continuous wavelet transform, Filtering in continuous wavelet transform domain.

UNIT – III

Discrete Wavelet Transform And Filterbanks: Orthogonal and bi-orthogonal two-channel filter banks, Design of two-channel filter banks, Tree-structured filter banks, Discrete wavelet transform, Non-linear approximation in the Wavelet domain, multi resolution analysis, Construction and Computation of the discrete wavelet transform, the redundant discrete wavelet transform.

UNIT – IV

Multi Resolution Analysis: Multirate discrete time systems, Parameterization of discrete wavelets, Bi-orthogonal wavelet bases, Two dimensional, wavelet transforms and Extensions to higher dimensions, wave packets

UNIT – V

Applications: Signal and Image compression, Detection of signal changes, analysis and classification of audio signals using CWT, Wavelet based signal de-noising and energy compaction, Wavelets in adaptive filtering, Adaptive wavelet techniques in signal acquisition, coding and lossy transmission, Digital Communication and Multicarrier Modulation, Trans multiplexers , Image fusion, Edge Detection and object isolation.

Learning Resources:

1. A Wavelet Tour of Signal Processing, 2nd edition, S. Mallat, Academic Press, 1999.
2. Wavelet transforms: Introduction, Theory and applications, Raghuvveer rao and Ajit S.Bopardikar, Pearson Education Asia, 2000.
3. Fundamentals of Wavelets: Theory, Algorithms, and Applications, J.C. Goswami and A.K. Chan, 2nd ed., Wiley, 2011.
4. Wavelets and their Applications, Michel Misiti, Yves Misiti, Georges Oppenheim, Jean-Michel Poggi, John Wiley & Sons, 2010 .
5. Multirate Systems and Filter Banks, P. P. Vaidyanathan, Pearson Education, 2004.

COURSE OBJECTIVES	COURSE OUTCOMES
<p>This will enable the students should be able to:</p> <ol style="list-style-type: none"> 1. Understand, how to improve your writing skills and level of readability 2. Learn about what to write in each section 3. Understand the skills needed when writing a Title 4. Ensure the good quality of paper at very first-time submission 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. write research papers 2. write citations as per the MLA style sheet and APA format 3. write concisely and clearly following the rules of simple grammar, diction and coherence.

UNIT-I:

Planning and Preparation, Word Order, Breaking up long sentences. Structuring Paragraphs and Sentences, Being concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

UNIT-II:

Clarifying Who Did What, Highlighting your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts, Introduction

UNIT-III:

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

UNIT-IV:

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature, useful phrases, how to ensure paper is as good as it could possibly be the first-time

submission.

UNIT-V:

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

L:T:P (Hrs./week) : 0:0:3	SEE Marks: -	Course Code: PII20PC111EC
Credits : 2	CIE Marks: 50	Duration of SEE : -

COURSE OBJECTIVES	COURSE OUTCOMES
1. To perform basic signal operations using simulink. 2. To design a digital filter. 3. To Perform Digital Image Processing operations.	On completion of the course, students will be able to 1. Develop MATLAB files for the verification of system response and design digital filters using various methods. 2. Generate various musical effects with digital filter. 3. Work with simulink environment. 4. Perform various operations on digital images.

(A) SECTION - 1

1. Generating Basic Waveforms (Impulse, Step, Ramp, Sin, Exponential....)
2. Digital FIR implementation and realizations: with and without windows.
3. Design of IIR filters (Butterworth and Chebychev).
4. Generation of Musical effects using digital filters.
5. Using the Simulink generate the basic waveforms (Impulse, Step, Ramp, Sin, Exponential...), observe the waveforms on the CRO.
6. Using the Simulink generate the modulated waveforms.
7. Study and implementation of Sigma-Delta modulator / Transmultiplexer.

(B) SECTION - 2

1. Understanding images and Image Basics
2. Image Arithmetic Operations and Logical operations
3. Image Geometric Operations
4. Image Enhancement operations
5. Image Noise Models
6. Image Spatial Filtering and Frequency domain filtering
7. Image Restoration
8. Edge Detection Operations
9. Image Segmentation
10. Colour Image Operations

Note: The experiments will be decided and modified if necessary and conducted by the lecturer concerned.

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Compare different cross compilers and install Keil v5 μVision IDE in x86 Windows 7 & above or Linux 2.6 (Ubuntu 16.04 LTS) & above host. 2. Develop programming constructs in embedded C for C51 targets to configure built-in peripherals. 3. Simulate actual hardware environment by designing hardware in Proteus7.x & above. 4. Implement Device Drivers for off-chip I/O & memories with C51 MCU. 5. Adopt debugging policies for validating the designed firmware. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Implement embedded C constructs to configure built-in registers of C51 target. 2. Demonstrate the hardware emulation of the design on Proteus 7.x IDE. 3. Design & Implement off-chip OS-less device drivers for C51 in Keil v5 μVision IDE 4. Demonstrate efficient Interrupt Service Routine coding principles in C/C++. 5. Analyze & suggest debugging methods for any given specifications with C51 target.

List of Experiments using Embedded C/Embedded C++:

1. To toggle LEDs connected to GPIOs of AT89S52 with some intentional Delay.
2. To design & implement 4x3 matrix Keypad Device Driver for ASCII mapping.
3. To design & implement 2x16 LCD Device Driver for displaying below text:

Line-1: **"Welcome@ESD Lab!"**

Line-2: **"Enter to Proceed"**

4. To Configure Timer0 and Timer1 for intended delay without interrupts.
5. To design & demonstrate the UART drivers for data transmission and data reception at 9600bps full duplex baud.
6. To design & implement the concept of writing Interrupt Service Routine (ISR) for external interrupt INT0, INT1.
7. To design & implement the concept of mixing of external ISRs with Internal ISRs and understanding the ISR handling process.
8. To design & implement LED Seven Segment driver with adjustable delay.
9. To design & implement User Centric template Menu designs in Embedded C
10. To design and implement embedded C/C++ constructs for programming LPC2148 ARM powered MCU.

Suggested tools for use:

Seminar

SYLLABUS FOR M.E. ECE (CE&SP) – I SEMESTER

L:T:P (Hrs./week) : 0:0:2	SEE Marks: -	Course Code: PII20PC138EC
Credits : 1	CIE Marks: 50	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
Prepare the student for a systematic and independent study of the state of the art topics in a broad area of his / her specialization.	On completion of the course, students will be able to <ol style="list-style-type: none"> 1. Selection of a suitable topic / problem for investigation and presentation. 2. Carryout literature survey and prepare the presentation. 3. Formulating the problem, identify tools and techniques for solving the problems. 4. Clear communication and presentation of the seminar topic. 5. Apply ethical principles in preparation of seminar report.

Oral presentation and technical report writing are two important aspect of engineering education. The objective of the seminar is to prepare the student for a systematic and independent study of the state of the art topics in the advanced fields of Communication Engineering and related topics.

Seminar topics may be chosen by the students with advice from the faculty members. Students are to be exposed to the following aspects for a seminar presentation.

- Literature survey
- Organization of the material
- Presentation of OHP slides / LCD presentation
- Technical writing

Each student required to:

1. Submit a one page synopsis before the seminar talk for display on the notice board.
2. Give a 20 minutes time for presentation following by a 10 minutes discussion.
3. Submit a detailed technical report on the seminar topic with list of references and slides used.

Seminars are to be scheduled from the 3rd week to the last week of the semester and any change in schedule shall not be entertained.

For award of sessional marks, students are to be judged by at least two faculty members on the basis of an oral and technical report preparation as well as their involvement in the discussions.

Explain objectives of research and research process. 2. search the relevant literature and summarize information for formulating the research problem. 3. collect and organize the data for the preparation of research report. 4. explain different types of intellectual property rights and related laws. 5. understand the patent administration system.

UNIT - I

Research Methodology: Meaning of research, Objectives and motivation of research, types of research, research approaches, significance of research, research methods versus methodology, criteria of good research, Research problem formulation.

UNIT - II

Literature survey: Importance of literature survey, sources of information, Literature review: Need of Literature review, Plagiarism, research ethics, errors in research, Assessment of quality of journals.

UNIT - III

Data collection & report preparation: Collection of primary data, secondary data, data organization, methods of data grouping, diagrammatic representation of data, graphic representation of data. Effective technical writing and how to write report, format of a research proposal, contents of a standard technical journal/conference paper, contents of dissertation.

UNIT - IV

Introduction to Intellectual property law: Basics and types of intellectual property, international organizations, agencies and treaties.

Law of Trademarks: Purpose and functions of trademarks, types of Marks, acquisition of trade mark rights, protectable matter and trade mark registration process, Trade Mark Act.

UNIT - V

Law of copyrights: Introduction, common law rights. Rights of reproduction, rights to display work publicly, other limitations of exclusive rights, copyright ownership issues, copy right registration and Berne convention.

Law of Patents: Administration of Indian patent system, Introduction, rights under patent law. Design patents, Plant patents. Patenting process. Patent ownership and transfer, new developments in IPR and international patent laws, Geographical Indications.

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PC210EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To study performance of different communication techniques in fading channels. 2. To study theory of Galois fields and design of block codes such as BCH, RS, LDPC and polar codes. 3. To get acquainted with the design of both convolution and turbo encoders and decoders. 4. To study space time coding for MIMO systems. 5. To get acquainted with applications of channel coding and evolution of 5G channel codes. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. understand different communication techniques and their performance in fading 2. understand theory of block codes such as BCH, RS, LDPC, QC-LDPC and polar codes 3. design encoders and decoders for BCH,RS,LDPC and polar codes 4. understand theory of conventional convolutional, and tail-biting convolutional codes and convolutional turbo, and tail-biting turbo codes and their encoders and decoders design 5. understand space time coding for MIMO systems 6. know applications of channel coding and evolution of 5G channel codes

UNIT – I

Introduction: Digital communication system, Wireless channel statistical models, BER performance in AWGN and fading channels for different modulation schemes, BER performance of CDMA, FH – CDMA and OFDM in AWGN and fading channels, capacity of fading channels with CSI, Diversity reception, channel coding Theorem, Channel coding gain.

UNIT – II

Block Coding: Galois fields, polynomials over Galois fields, BCH codes, CRC codes, RS codes, Decoding Techniques for RS codes, LDPC and QC LDPC encoders and decoders, Performance analysis of RS, LDPC codes and QC LDPC codes.

Polar Codes: polar encoder and decoder, performance analysis of polar codes

UNIT – III

Convolution codes: Linear convolution encoders, Structural properties of Convolution codes, Viterbi decoding technique for convolution codes – Soft / Hard decision, tail biting convolutional codes, performance analysis of concatenation of block codes and convolutional codes. Concept of Trellis coded modulation.

UNIT – IV

Turbo Codes: Parallel concatenation, Turbo encoder, encoding tail biting codes with RSC (feedback) encoders. Enhanced turbo codes, Iterative decoding using BCJR algorithm, Performance analysis.

UNIT – V

Space – Time Coding: MIMO system, rate gain & diversity gain, transmit diversity, Alamouti scheme, OSTBC codes, Linear space – time codes, trellis space – time codes.

Learning Resources:

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PC220EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To provide design fundamental principles and concepts required to understand and solve problems in the area of wireless communication systems. 2. To apply concepts and techniques for characterization and estimation of wireless channels. 3. To provide problem solving skills required to analyse and evaluate the performance of wireless communication and networking using modern tools. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Demonstrate the fundamental knowledge of wireless communication systems and standards. 2. Apply the knowledge acquired to formulate and solve problems in the area of wireless communication and networking. 3. Analyze different radio channel models, wireless communication system architectures, standards and evaluate the performance of the system. 4. Carryout simulation using modern tools to understand different performance parameters of wireless communication systems. 5. Become acquainted with recent advancements and developments in the area of wireless communications and networking.

UNIT - I

Modern wireless communication systems and standards: Comparison of 1G, 2G wireless communication systems, GSM Services and Features, GSM System architecture, Radio Sub systems of GSM, GSM Channel Types, Frame structure and Signal processing. CDMAone (IS-95) standard, CDMA Forward Channel, CDMA Reverse Channel.

UNIT – II

Multipath Radio Propagation and Fading: Characterization of wireless channel, Basic propagation mechanisms, Free space propagation model,

Mobile radio propagation model, Multipath fading and factors influencing fading, Types of small-scale fading, Fading effects due to multipath time delay spread, Fading effects due to Doppler spread, Statistical models for multipath fading channel.

UNIT – III

Space-time Communication techniques to Mitigate Fading Effects:

Introduction to space-time communication, Equalization techniques, Diversity and diversity combining techniques, RAKE receiver, Channel Coding techniques, Modeling and simulation of wireless communication systems.

UNIT – IV

Wireless networking: Wireless data networking devices, Wireless data in GSM networks, IS – 95 and GPRS networks, 3GPP standard and features, UMTS network architecture and Radio Interface, 3G data networks, Introduction to 4G networks

UNIT – V

Signaling and call control in wireless networks: Call admission control, Location management for cellular networks, Location update, Call setup and paging, Two-tiered architecture of IS-41, signal flow diagrams for IS-41, SS7 signaling Network model and Common channel signaling, An example of SS7-global cellular network interoperability.

Microcontrollers and DSP Processors Architecture

Professional Core - VI

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PC230EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<p>To give an exposure to the C51 microcontroller, various fixed point and floating point DSP architectures and to implement various signal processing algorithms using TI DSPs.</p>	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand the architecture of C51 microcontroller and develop the microcontroller based programs for various applications. 2. Differentiate between DSP Processors and General Purpose processors. 3. Apply different number formats on DSP processors. 4. Understand the architecture details of fixed point DSPs and floating point DSPs. 5. Illustrate the features of on-chip peripherals and its interfacing with DSP processors. 6. Design and implement signal processing algorithms on DSP processors.

UNIT – I

Review of Microcontrollers: Review of C51 Architecture & addressing modes, Programming on-chip peripherals: Timers and Counters, Serial communication, in Embedded- C.

Introduction to DSP Processors: Differences between DSP and other micro processor architectures. Fixed point, Floating point and block Floating point formats, IEEE-754 Floating point, Dynamic range and precision, Q-notation.

UNIT – II

Architectural features of programmable Digital signal processing Devices: Introduction, Basic Architectural features, DSP computational

building blocks-Multipliers, shifter, MAC, ALU, Bus architecture and memory-on-chip memory, organization of on-chip memory, Data addressing capabilities, Address generation unit, Programmability and program execution, Speed issues.

UNIT – III

Programmable Digital signal processors: Introduction, Commercial Digital Signal Processing Devices, Overview of TMS320C54XX: Fixed point DSPs, Architecture of TMS320C54XX Processor, addressing modes, Instructions set, Interrupts of TMS320C54XX processors, Pipelining and on-chip peripherals.

UNIT – IV

Floating point DSPs, Architecture of TMS320C67XX Processor, addressing modes, Instructions set, Pipelining and on-chip peripherals.

UNIT – V

Implementation of algorithms on DSP processors - Convolution, FIR filter, IIR filter, Decimation and Interpolation of signals.

Learning Resources:

Adaptive Signal Processing

Professional Elective - III

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE210EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To introduce some practical aspects of signal processing, and in particular adaptive systems 2. The basic principles of adaptation which cover various adaptive signal processing algorithms (e.g., the LMS algorithm) and its applications, such as adaptive noise cancellation, interference canceling, system identification. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Understand basic concepts of adaptive signal processing. 2. Derive & apply the principle of orthogonality 3. Understand the convergence issues, computational complexities and optimality of Weiner & scalar & vector Kalman filters. 4. Derive the Least Means Squares (LMS) & Recursive Least Square (RLS) adaptive filter algorithms & apply them to problems in system identification & linear prediction. 5. Develop adaptive systems for various applications.

UNIT – I

Approaches to the development of adaptive filter theory. Introduction to filtering, smoothing and prediction. Wiener filter theory, introduction; Error performance surface; Normal equation; Principle of orthogonality; Minimum mean squared error; example.

UNIT – II

Gradient algorithms; Learning curves; LMS gradient algorithm; LMS stochastic gradient algorithms; convergence of LMS algorithms.

UNIT – III

Applications of adaptive filter to adaptive noise canceling, Echo cancellation in telephone circuits and adaptive beam forming.

UNIT – IV

Kalman Filter theory; Introduction; recursive minimum mean square estimation for scalar random variables; statement of the Kalman filtering problem: the innovations process; Estimation of state using the innovations process; Filtering examples.

UNIT – V

Vector Kalman filter formulation. Examples. Application of Kalman filter to target tracking.

Learning Resources:

Detection and Estimation Theory

Professional Elective - III

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE220EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To a quick review of fundamental linear algebra and stochastic process concepts required in detection and estimation,. 2. To provide the statistical decision rules and performance metrics used for detection of signals in noise. 3. To apply decision rules in the detection of deterministic signals in noise. 4. To apply decision rules in the detection of random signals in noise. 5. To derive and apply methods for estimation of signal parameters in noise. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. recollect basic concepts required in detection and estimation 2. understand statistical decision theory and the performance measures for most of the signal detection and estimation problems . 3. understand the detection of deterministic signals 4. understand the detection of random signals 5. understand estimation theory of signals

UNIT – I

Review of Linear Algebra and Stochastic processes: Linear Algebra: vector and matrices properties, orthogonality, linear independence, Eigen values and eigenvectors. Stochastic Processes: wide sense stationary (WSS) process, auto correlation, cross correlation, Time averages, moments, ergodicity, power spectral density

UNIT – II

Statistical Decision Theory: Bayesian, minimax, and Neyman-Pearson decision rules, receiver operating characteristics, composite hypothesis testing, generalized likelihood ratio test, locally optimum tests, asymptotic relative efficiency.

UNIT – III

Detection of Deterministic Signals: Detection in white Gaussian noise, correlator, matched filter, multiple signals, linear model, Signal processing examples. Detection in colored Gaussian noise, Karhunen-Loeve expansions and whitening filters.

UNIT – IV

Detection of Random Signals: Estimator-correlator(energy detector), linear model, general Gaussian detection, detection of Gaussian random signal with unknown parameters, weak signal detection

UNIT – V

Estimation Theory: Minimum variance estimators, Cramer-Rao lower bound, Linear Models and Unbiased Estimators, Least squares estimation, ML estimation, Bayesian Estimation: MMSE,MAP; Kalman Filtering.

CODECS for Multimedia Applications

Professional Elective - III

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE230EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To get acquainted with components of multimedia and understand fundamental concepts in video and basics of digital audio 2. To study digital audio compression techniques and different CODECS. 3. To understand image transforms and different image compression standards 4. To study video compression techniques and standards 5. To get acquainted with current trends in digital signal processing. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Get familiarity with multimedia components and software tools and understand fundamental of multimedia. 2. Compress digital audio using different techniques and compress speech signal using different CODECS 3. Compress images using different standards such as JPEG, JPEG 2000 and SPIHT and EZW codes 4. Compress video signals using standards H261, H263 and MPEG4 and H264 CODECS 5. Have knowledge on the current trends in digital signal processing.

UNIT – I

Introduction to multimedia: components of multimedia; overview of multimedia software tools;

Graphics and Image Data Representations: Graphics/image data types, popular file formats;

Fundamental Concepts in Video: analog and digital video.

Basics of Digital Audio – Storage requirements for multimedia applications; Need for Compression - Taxonomy of compression techniques

UNIT – II

Digital audio: audio compression techniques; μ -Law and A-Law, companding, ADPCM.

Speech compression: waveform codecs; source codecs; hybrid codecs;
Shorten: lossless speech compressor, MPEG-1 audio layers

UNIT – III

Image Transforms – orthogonal transforms- DCT, JPEG, progressive image compression- JBIG, JBIG2 standards , Vector quantization, Differential lossless compression –DPCM Wavelet based compression- Filter banks, DWT, Multiresolution decomposition, SPIHT and EZW Coders, JPEG 2000 standard

UNIT – IV

Video signal components - Video compression techniques – MPEG Video Coding– Motion Compensation – H.261 , H.263 Standard , .MPEG4 and H.264 codecs.

UNIT – V

PLL, Image Processing, FSK modems, Voice detection and reverse play back, multi-rate filters, Current trends in digital signal processors.

Network Security and Cryptography

Professional Elective - IV

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE240EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To understand the fundamentals of Cryptography 2. To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity. 3. To understand the various key distribution and management schemes. 4. To understand how to deploy encryption techniques to secure data in transit across data networks 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Analyze the vulnerabilities in any computing system and hence be able to design a security solution 2. Identify the security issues in the network and resolve it. 3. Evaluate security mechanisms using rigorous approaches 4. Compare and Contrast different IEEE standards and electronic mail security

UNIT- I

Introduction : Attacks, Services and Mechanisms, Security attacks, Security services, A Model for Internetwork security, Classical Techniques: Conventional Encryption model, Steganography, Classical Encryption Techniques. Modern Techniques : Simplified DES, Block Cipher Principles, Data Encryption standard, Strength of DES, Block Cipher Design Principles.

UNIT- II

Encryption : Triple DES, International Data Encryption algorithm, Blowfish, RC5, Characteristics of Advanced Symmetric block ciphers. Conventional Encryption: Placement of Encryption function, Traffic confidentiality, Key distribution, Random Number Generation.

UNIT – III

Public Key Cryptography: Principles, RSA Algorithm, Key Management, Diffie-Hellman Key exchange, Elliptic Curve Cryptography. Number Theory: Prime and Relatively prime numbers, Modular arithmetic, Fermat's

and Euler's theorems, Testing for primality, Euclid's Algorithm, the Chinese remainder theorem, Discrete logarithms.

UNIT- IV:

Message Authentication and Hash Functions: Authentication requirements and functions, Message Authentication, Hash functions, Security of Hash functions and MACs. Hash and Mac Algorithms: MD File, Message digest Algorithm, Secure Hash Algorithm. Digital signatures and Authentication protocols: Digital signatures, Authentication Protocols, Digital signature standards. Authentication Applications: Kerberos, Electronic Mail Security: Pretty Good Privacy, S/MIME.

UNIT – V:

IP Security: Overview, Architecture, Authentication, Encapsulating Security Payload, Key Management. Web Security: Web Security requirements, Secure sockets layer and Transport layer security, Secure Electronic Transaction. Intruders, Viruses and Worms: Intruders, Viruses and Related threats. Firewalls: Firewall Design Principles, Trusted systems.

Learning Resources:

1. Cryptography and Network Security: Principles and Practice - William Stallings, Pearson Education.
2. Network Security Essentials (Applications and Standards) by William Stallings Pearson Education.
3. Fundamentals of Network Security by Eric Maiwald (Dreamtech press)
4. Principles of Information Security, Whitman, Thomson.
5. Introduction to Cryptography, Buchmann, Springer.

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE250EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To provide students with contemporary knowledge in Data Compression 2. To equip students with skills to analyze and evaluate different mathematical aspects required for lossy and lossless Compression methods. 3. To study methods for compression of symbolic data as well as audio and video data, and to gain an appreciation of the ubiquity and importance of compression technologies. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Solve the problems associated different source coding techniques. 2. Understand the operation of scalar and vector quantizer. 3. Implement the compression techniques to compress the different raw data. 4. Summarize the concepts associated textual, image and video compression. 5. understand the most common file formats for textual, audio and video.

UNIT – I

Review of Information Theory, The discrete memory less information source - Kraft inequality; optimal codes Source coding theorem. Compression Techniques - Lossless and Lossy Compression - Mathematical Preliminaries for Lossless Compression - Huffman Coding - Optimality of Huffman codes - Extended Huffman Coding – Adaptive Huffman Coding - Arithmetic Coding - Adaptive Arithmetic coding, Run Length Coding, Dictionary Techniques - Lempel-Ziv coding, Applications - Predictive Coding - Prediction with Partial Match – Burrows Wheeler Transform, Dynamic Markov Compression.

UNIT – II

Rate distortion theory: Rate distortion function $R(D)$, Properties of $R(D)$; Calculation of $R(D)$ for the binary source and the Gaussian source, Rate distortion theorem, Converse of the Rate distortion theorem, Quantization - Uniform & Non-uniform - optimal and adaptive quantization, vector

quantization and structures for VQ, Optimality conditions for VQ, Predictive Coding - Differential Encoding Schemes.

UNIT – III

Mathematical Preliminaries for Transforms, Sub-bands and Wavelets, Karhunen Loeve Transform, Discrete Cosine and Sine Transforms, Discrete Walsh Hadamard Transform.

UNIT – IV

Transform coding – Sub-band coding – Wavelet transform based Compression.

UNIT – V

Basics of Compression standards: Audio Compression standards: MPEG, Dolby AC3; and Video Compression Standards: MPEG, H.261, H.263 and H.264.

Learning Resources:

DEPARTMENT OF ELECTRONICS AND COMMUNICATIONS ENGINEERING

Smart Antennas for Mobile Communications

Professional Elective - IV

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 3:0:0	SEE Marks: 60	Course Code: PII20PE260EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
Understand the cellular concepts and smart antennas.	On completion of the course, students will be able to <ol style="list-style-type: none"> 1. Demonstration of various cellular CDMA's 2. Estimation of CDMA – 2000 3. Explain the various beam forming networks and systems 4. Demonstration of array calculations for digital radio receivers techniques. 5. Explanation of smart antenna techniques for non-coherent and coherent CDMA\ 6. Demonstration of radio link beam forming, range improvement and various filtering algorithms.

UNIT – I

Cellular Radio concepts – Spread Spectrum CDMA – Antenna Systems – Radio wave propagation – fading – Cellular CDMA – IS-95 CDMA system work – Reverse Traffic Transmission – Forward Channel Signal – Evaluation of CDMA 2000.

UNIT – II

Introduction to Smart Antennas – Spatial processing for wireless systems – Fixed beam forming networks – Switched beam systems – Adaptive Antenna Systems – Wide band Smart Antennas – Digital Radio Receiver techniques - Array calibrations.

UNIT – III

Smart Antennas Techniques for CDMA: Non Coherent CDMA – Coherent CDMA – Multi user spatial processing – Re sectoring using Smart Antennas – Down link beam forming for CDMA.

UNIT – IV

CDMA System Range and Improvements using Spatial Filtering – Range extensions in CDMA – Spatial filtering at IS-95 base station – Reverse channel performance – Spatial filtering at WLL subscriber unit – Range and Capacity Analysis.

UNIT – V

Optimal Spatial Filtering and Adaptive Algorithms – Array performance in Multipath – under loaded, over loaded adaptive arrays – Adaptive algorithms for CDMA – Multi Target Decision Directed Algorithms – Estimation Algorithms – RF position location systems.

Learning Resources:

1. Joseph C. Liberti Jr., Theodore S Rappaport, “Smart Antennas for wireless communications IS-95 and third generation CDMA applications”, PTR – PH publishers, 1st edition, 1989.
2. T.S Rappaport, “Smart Antennas Adaptive arrays algorithms and wireless position location”, IEEE press 1998, PTR – PH publishers 1999.
3. Garg, “IS-95 CDMA and CDMA 2000, “Cellular / PCs systems implementation”, Pearson Education, 2002.

Communication Systems Simulation Laboratory

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 0:0:3	SEE Marks: -	Course Code: PII20PC211EC
Credits : 2	CIE Marks: 50	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<p>This lab course complements EE341 as students conduct experiments with signals, systems, and communication systems. Systems are built with discrete components and also verified through matlab and analytically</p>	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Study signal and linear time invariant system properties. 2. Study, design, and build amplitude modulation systems examining tradeoffs in different communication systems. 3. Study, design, and build angle modulation systems examining tradeoffs in different communication systems. 4. Perform experiments in converting analog information into digital data via sampling, quantization, and coding.

Section - 1:

1. Simulation study of wavelength division multiplexing and de-multiplexing.
2. Study of digital modulation schemes using Spectrum analyzer.
3. Study and implementation of different simulation techniques.
4. Error detection codes in data communications.
5. Analysis of error coding, parity check and hamming check.
6. Simulation of a communication channel using convolutional encoding and Viterbi decoding using MATLAB.
7. Simulation of Channel coding / decoding using MATLAB and SIMULINK.

Section – 2:

1. Study of wireless LAN
2. Using Wireless digital communication trainer, study of:
 - a) Baseband digital communication link
 - b) Quadrature modulation schemes
 - c) Adaptive equalization techniques
 - d) GSM and Basics of DS-CDMA
 - f) Basics of OFDM.
3. Implementation of DPSK modulators and demodulators using MATLAB.
4. Simulation of software radio system using MATLAB.
5. Simulation study of collaborative transmission schemes for Multiuser wireless systems using MATLAB.

Note: The experiments will be decided and modified if necessary and conducted by the lecturer concerned.

DSP Processors Applications Laboratory

SYLLABUS FOR M.E. ECE (CE&SP) – II SEMESTER

L:T:P (Hrs./week) : 0:0:3	SEE Marks: -	Course Code: PII20PC221EC
Credits : 2	CIE Marks: 50	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. To understand the architecture of a digital signal processor and programming issues in fixed-point/floating digital signal processor. 2. To learn to design a real-time signal processing algorithms using the fixed-point processor. 3. To implement signal processing projects on the processor. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Develop and Implement DSP algorithms in CCS software using a computer language such as C with TMS320C6748 floating/fixed point Processor. 2. Analyze and observe the magnitude and phase characteristics of digital IIR Butterworth, Chebyshev filters. 3. Analyze and Observe Magnitude and phase characteristics of digital FIR filters using window techniques. 4. Implement C code for fast fourier transform on fixed point processor.

List of Experiments:

1. Introduction and Preview: Digital Signal Processing and Digital Signal Processors
2. Linear convolution of two given sequences
3. Circular convolution of two given sequences
4. Computation of N- Point DFT of a given sequence
5. Impulse response of first order and second order system
6. Design of FIR (LP/HP) using windows
7. Design of IIR (HP/LP) filters
8. Sine Wave Generation
9. Speech Processing-Noise suppression in speech signal
10. Raster Example for Image Processing

11. Implementation of Decimation and Interpolation.

12. Pif Video Processing (Video Loopback)

Note: The experiments will be decided and modified if necessary and conducted by the lecturer concerned.

MIMO Communication Systems

Professional Elective - V

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PII20PE310EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
6. To learn about the MIMO communication system and modelling the MIMO channel and evaluation of MIMO system capacity. 7. To know the significance of the diversity scheme in improving the communication link reliability and to learn about different diversity techniques with the usage of multiple antennas at transmitter and/or receivers, space time codes, and receiver designs for MIMO spatial multiplexing. 8. To study the basics of orthogonal frequency division multiplexing (OFDM), and the design of OFDM system and MIMO OFDM system 9. To learn about the MIMO channel techniques and thereby CSI required for signal detection in MIMO systems. 10. To understand beam forming and Pre-coding techniques for MIMO systems	On completion of the course, students will be able to 6. model MIMO channels and evaluate MIMO channel capacity. 7. Design space time codes to alleviate the wireless channel fading effects and get the knowledge of receiver designs for MIMO spatial multiplexing. 8. understand the basics of OFDM, and able to design OFDM system, and MIMO OFDM system. 9. estimate MIMO channel coefficients and thereby CSI, which required for signal detection in MIMO systems. 10. Develop beam forming and pre-coding for MIMO systems

UNIT – I

MIMO Channel modeling and MIMO capacity: Basics of wireless channel modeling, Classical i.i.d. random MIMO channel model, MIMO frequency selective channel model, extended channel models, and MIMO correlated channel model, Capacity of MIMO channels, Ergodic and Outage Capacity, Influence of channel properties on capacity, Capacity limits of MIMO channels.

UNIT – II

MIMO Diversity and Spatial Multiplexing: The concept of diversity, Receive diversity and transmit diversity, Common diversity performance metrics, Design criteria for space-time codes, Orthogonal space-time block codes(OSTBC), Spectral efficiency of a STBC, delay diversity, cyclic delay diversity, space frequency codes, concept of spatial multiplexing, MIMO zero forcing(ZF) receiver, MIMO MMSE receiver, MIMO ML receiver,

Nonlinear MIMO receiver (V-BLAST receiver), Diversity and multiplexing gains trade off in MIMO systems.

UNIT – III

Orthogonal frequency division multiplexing: Single carrier approach versus multi carrier approach for data transmission, Basic principle of OFDM, OFDM system configuration, choice of OFDM parameters, effect of frequency offset on OFDM, frequency offset estimation, impact of cyclic prefix on data rate, Peak to average power ratio, PAPR reduction techniques, BER of OFDM, MIMO OFDM.

UNIT – IV

MIMO channel estimation: Training symbol based LS and MMSE channel estimation, Correlative channel sounding, Relation between OFDM system measurement model and compressive sensing reconstruction model, Estimation of OFDM channel using OMP algorithm, MIMO OFDM channel estimation. Performance analysis of channel estimation techniques

UNIT – V

MIMO Beam forming: Beam forming principles, Digital Beam forming, Adaptive Beam forming, Beam forming with CSI known at the transmitter, Linear precoding structure, Precoding design criteria, Forced Zero (ZF) precoding method, MMSE precoding method, SVD precoding method, Codebooks for MIMO.

Learning Resources:

Voice and Data Networks

Professional Elective - V

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PII20PE320EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
Understand the concepts of voice networks, queuing models and data networks.	On completion of the course, students will be able to 1. Protocol, algorithms, trade-offs rationale. 2. Routing, transport, DNS resolutions 3. Network extensions and next generation architectures.

UNIT - I

Network Design Issues, Network Performance Issues, Network Terminology, centralized and distributed approaches for networks design, Issues in design of voice and data networks.

UNIT – II

Layered and Layer less Communication, Cross layer design of Networks, Voice Networks (wired and wireless) and Switching, Circuit Switching and Packet Switching, Statistical Multiplexing.

UNIT – III

Data Networks and their Design, Link layer design- Link adaptation, Link Layer Protocols, Retransmission. Mechanisms (ARQ), Hybrid ARQ (HARQ), Go Back N, Selective Repeat protocols and their analysis.

UNIT – IV

Queuing Models of Networks, Traffic Models , Little's Theorem, Markov chains, M/M/1 and other Markov systems, Multiple Access Protocols, Aloha System , Carrier Sensing, Examples of Local area networks,

UNIT – V

Inter-networking, Bridging, Global Internet, IP protocol and addressing, Sub netting, Classless Inter domain Routing (CIDR), IP address lookup,

Routing in Internet. End to End Protocols, TCP and UDP. Congestion Control, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery, Congestion avoidance, RED TCP Throughput Analysis, Quality of Service in Packet Networks. Network Calculus, Packet Scheduling Algorithms.

Software Defined and Cognitive Radio Networks

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PII20PE330EC
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
1. To understand basic architecture of software defined radio 2. To study signal processing devices and architectures 3. To describe spectrum sensing techniques of cognitive radio	On completion of the course, students will be able to 1. Gain knowledge on software defined radio and cognitive radio. 2. Describe about signal processing devices and architectures 3. Discuss on software and hardware architecture of Software Defined and Cognitive Radio. 4. Analyze spectrum sensing methods 5. Implement CR and SDR applications on to FPGA and ASICS.

UNIT – I

Introduction to SDR: What is Software-Defined Radio, The Requirement for Software-Defined Radio, Legacy Systems, The Benefits of Multi-standard Terminals, Economies of Scale, Global Roaming, Service Upgrading, Adaptive Modulation and Coding, Operational Requirements, Key Requirements, Reconfiguration Mechanisms, Handset Model, New Base-Station and Network, Architectures, Separation of Digital and RF, Tower-Top Mounting, BTS Hoteling, Smart Antenna Systems, Smart Antenna System Architectures, Power Consumption Issues, Calibration Issues, Projects and Sources of Information on Software Defined Radio,

UNIT – II

Basic Architecture of a Software Defined Radio: Software Defined Radio Architectures, Ideal Software Defined Radio Architecture, Required Hardware Specifications, Digital Aspects of a Software Defined Radio, Digital Hardware, Alternative Digital Processing Options for BTS Applications, Alternative Digital Processing Options for Handset Applications, Current Technology Limitations, A/D Signal-to-Noise Ratio and Power Consumption, Derivation of Minimum Power Consumption, Power Consumption Examples, ADC Performance Trends, Impact of Superconducting Technologies on Future SDR Systems.

UNIT – III

Signal Processing Devices and Architectures: General Purpose Processors, Digital Signal Processors, Field Programmable Gate Arrays,

Specialized Processing Units, Tileria Tile Processor, Application-Specific Integrated Circuits, Hybrid Solutions, Choosing a DSP Solution. GPP-Based SDR, Non real time Radios, High-Throughput GPP-Based SDR, FPGA-Based SDR, Separate Configurations, Multi-Waveform Configuration, Partial Reconfiguration, Host Interface, Memory-Mapped Interface to Hardware, Packet Interface, Architecture for FPGA- Based SDR, Configuration, Data Flow, Advanced Bus Architectures, Parallelizing for Higher Throughput, Hybrid and Multi-FPGA Architectures, Hardware Acceleration, Software Considerations, Multiple HA and Resource Sharing, Multi-Channel SDR.

UNIT – IV

Cognitive Radio : Techniques and signal processing History and background, Communication policy and Spectrum Management, Cognitive radio cycle, Cognitive radio architecture, SDR architecture for cognitive radio, Spectrum sensing Single node sensing: energy detection, cyclostationary and wavelet based sensing- problem formulation and performance analysis based on probability of detection Vs SNR. Cooperative sensing: different fusion rules, wideband spectrum sensing- problem formulation and performance analysis based on probability of detection Vs SNR.

UNIT V

Cognitive Radio: Hardware and applications: Spectrum allocation models. Spectrum handoff, Cognitive radio performance analysis. Hardware platforms for Cognitive radio (USRP, WARP), details of USRP board, Applications of Cognitive radio

Learning Resources:

1. "RF and Baseband Techniques for Software Defined Radio" Peter B. Kenington, ARTECH HOUSE, INC, 2005.

Fundamentals of Python Programming

Open Elective

SYLLABUS FOR M.TECH. III-SEMESTER

L:T:P(Hrs./week): 2:0:0	SEE Marks : 60	Course Code: PX19OE310CS
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES		COURSE OUTCOMES	
		On completion of the course, students will be able to	
1	Acquire problem solving skills	1	Develop Python programs with conditional statements and loops.
2	Write programs using Python language	2	Write programs using functions,
		3	Construct Python data structures programs using Strings Lists
		4	Design programs using tuples, and set.
		5	Develop programs using dictionaries

UNIT-I:

Basics of Python Programming: Features of Python, variables and identifiers, operators and expressions.

Decision control Statements: Selection/Conditional branching statements, basic loop structures/iterative Statements, nested loops, break, continue, and pass Statements.

UNIT-II:

Functions and Modules: function definition, function call, more on defining functions, recursive functions, modules.

UNIT –III:

Data Structures: Strings : Introduction, built-in string methods and functions, slice operation, String Module. Regular Expressions.

Lists : Introduction, nested list, cloning lists, basic list operations, list methods. Functional programming-filter(),map(),reduce() function.

UNIT-IV:

Tuples : Introduction, basic tuple operations, tuple assignment, tuples for returning multiple values, nested tuples, tuple methods and functions.

Set: Introduction, Set operations.

UNIT-V:

Dictionaries : Basic operations, sorting items, looping over dictionary, nested dictionaries, built-in dictionary functions.

Learning Resources:

Industrial Safety

Open Elective

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PX190E320XX
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

UNIT – I

Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

UNIT-II

Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment. Model Curriculum of Engineering & Technology PG Courses [Volume -II] 295

UNIT-III

Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

UNIT-IV

Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine,

v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

UNIT-V

Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Learning Resources:

1. Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services.
2. Maintenance Engineering, H. P. Garg, S. Chand and Company.
3. Pump-hydraulic Compressors, Audels, MCGraw Hill Publication.
4. Foundation Engineering Handbook, Winterkorn, Hans, Chapman & Hall London.

The break-up of CIE: Internal Tests + Assignments + Quizzes

| 1. No. of Internal Tests | : 2 | Max. Marks for each Internal Tests | : 30 |
| 2. No. of Assignments | : 3 | Max. Marks for each Assignment | : 5 |
| 3. No. of Quizzes | : 3 | Max. Marks for each Quiz Test | : 5 |

Duration of Internal Tests: 90 Minutes

VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS)

IBRAHIMBAGH, HYDERABAD – 500 031

DEPARTMENT OF MECHANICAL ENGINEERING

Advanced Operations Research

Open Elective

SYLLABUS FOR M.E. III SEMESTER

L:T:P(Hrs./week): 3:0:0	SEE Marks : 60	Course Code: PX19OE330ME
Credits : 3	CIE Marks : 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
The objective of this course is to: understand Linear & non-linear programming, transportation modelling, CPM & PERT for project scheduling and control, replacement, game theory and sequencing	On completion of the course, the student will be able to: 1. understand simplex, dual simplex, Sensitivity and transportation and their applications for shop floor problems. 2. understand the importance of Sensitivity analysis and various advanced LPP techniques 3. apply the techniques like CPM and PERT for project management. 4. apply various replacement techniques to find optimum replacement time period for equipment. 5. identify the best strategy to win the game and optimum sequence for minimum elapsed time.

UNIT-I: OPERATIONS RESEARCH-AN OVERVIEW

Meaning and Origin of Operations research, Introduction to Linear programming problems (LPP) -Formulation of LPP-Solution to LPP by Graphical method and simplex method.

UNIT-II: ADVANCED TOPICS IN LINEAR PROGRAMMING

Dual simplex method, special cases in LPP, Duality in LPP, Differences between primal and dual, shadow prices, sensitivity analysis. Non linear programming Khun Tucker conditions.

UNIT-III

Transportation Model: Definition of the transportation model-matrix of Transportation model-Formulation and solution of transportation models-Methods for calculating Initial basic feasible solution, optimal solution by Stepping stone method and MODI method.

Assignment Problem: Hungarian method of assignment problem, maximization in assignment problem, unbalanced problem, problems with restrictions, travelling salesman problems.

UNIT-IV: PROJECT SCHEDULING

Introduction to network analysis, Rules to draw network diagram, Fulkerson rule for numbering events, Critical path method, Summarisation of CPM calculations. PERT, Estimation of probability and its corresponding duration in PERT, Crashing of project and finding of optimal project duration in crashing.

UNIT-V

Replacement models: Introduction, replacement of items that deteriorate ignoring change in money value, replacement of items that deteriorate considering change in money value with time, replacement of items that fail suddenly – individual replacement policy, group replacement policy.

Game theory: Introduction, 2 person zero sum games, maximi– minima principle, principle of dominance, solution for mixed strategy problems graphical method for 2 x n and m x 2 games

Sequencing models: introduction, general assumptions, processing to jobs through 2 machines, processing 'n' jobs through m machines processing 2 jobs through m machines.

Learning Resources:

1. S. D.Sharma, "Operations Research", 10th edition, Newage India Pvt Ltd, New Delhi
2. Hamady.A.Taha An Introduction to Operations Research, "8th edition, TMH
3. Prem Kumar Gupta and Dr. DS Hira, "Operations Research ", S.Chand & Company Pvt. Ltd., 2014.
4. R. Paneerselvam, "Operations Research", PHI Learning Pvt Ltd., 2009.
5. NVS Raju, "Optimization methods for Engineers ", PHI Learning Pvt. Ltd. ., 2014
6. Col D.S. Cheema, "Operations Research", University science press, 2nd edition, India

Cost Management of Engineering Projects

Open Elective

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PX190E340XX
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

Introduction and Overview of the Strategic Cost Management Process
Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Learning Resources:

1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4. Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

Composite Materials

Open Elective

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PX190E350XX
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

UNIT-I

INTRODUCTION: Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT – II

REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

UNIT – III

Manufacturing of Metal Matrix Composites: Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. **Manufacturing of Ceramic Matrix Composites:** Liquid Metal Infiltration – Liquid phase sintering. **Manufacturing of Carbon – Carbon composites:** Knitting, Braiding, Weaving. Properties and applications.

UNIT-IV

Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

UNIT – V

Strength: Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount

truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Learning Resources:

1. Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, West Germany.
2. Materials Science and Engineering, An introduction. WD Callister, Jr., Adapted by R. Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2007.
3. Hand Book of Composite Materials-ed-Lubin.
4. Composite Materials – K.K.Chawla.
5. Composite Materials Science and Applications – Deborah D.L. Chung.
6. Composite Materials Design and Applications – Danial Gay, Suong V. Hoa, and Stephen W. Tasi.

Waste to Energy

Open Elective

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PX19OE360XX
Credits : -	CIE Marks: 40	Duration of SEE : 3 Hours

UNIT-I

Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

UNIT - II

Biomass Pyrolysis: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

UNIT – III

Biomass Gasification: Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for Model Curriculum of Engineering & Technology PG Courses [Volume -II] 299 thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

UNIT - IV

Biomass Combustion: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

UNIT – V

Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants –

Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

Learning Resources:

1. Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.
2. Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.
3. Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
4. Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

Business Analytics

Open Elective

SYLLABUS FOR M.E. ECE (CE&SP) – III SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: PX19OE370XX
Credits : 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Understand the role of business analytics within an organization. 2. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization. 3. To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making. 4. To become familiar with processes needed to develop, report, and analyze business data. 5. Use decision-making tools/Operations research techniques. 6. Manage business process using analytical and management tools. 7. Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Students will demonstrate knowledge of data analytics. 2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics. 3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making. 4. Students will demonstrate the ability to translate data into clear, actionable insights

UNIT - I

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

UNIT - II

Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business

Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

UNIT – III

Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization

UNIT – IV

Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

UNIT – V

Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.

UNIT – VI

Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

Learning Resources:

1. Business analytics Principles, Concepts, and Applications by Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, Pearson FT Press.
2. Business Analytics by James Evans, persons Education.

L:T:P (Hrs./week): 0:0:8	SEE Marks:	Course Code: PII20PW319EC
Credits : 4	CIE Marks:100	Duration of SEE :

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> 1. Selection of a suitable for investigation for the project 2. Literature survey 3. Carrying out investigation / experiments including the selection of approaches to be adopted 4. Analysis of the results in interaction with the project guides. 5. Preparation of presentations and technical report. 	<p>On completion of the course, students will be able to</p> <ol style="list-style-type: none"> 1. Students go through the foundation needed for carrying out new investigations 2. Students would be ready with the problem to be investigated in phase II 3. They also get the training needed for presentations of their work.

The students must be given clear guidelines to execute and complete the project on which they have delivered a seminar in the 3rd semester of the course.

All projects will be monitored at least twice in a semester through student's presentation. Sessional marks should be based on the grades/marks, awarded by a monitoring committee of faculty members as also marks given by the supervisor.

Efforts be made that some of the projects are carries out in industries with the help of industry coordinates.

Common norms will be established for documentation of the project report by the respective department.

The final project reports must be submitted two weeks before the last working day of the semester.

The project works must be evaluated by an external examiner and based on his comments a viva voice will be conducted by the departmental committee containing of HOD, two senior faculty and supervisor.
