VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS)

ACCREDITED BY NAAC WITH 'A++' GRADE Ibrahimbagh, Hyderabad-31
Approved by A.I.C.T.E., New Delhi and Affiliated to Osmania University, Hyderabad-07

Sponsored by VASAVI ACADEMY OF EDUCATION Hyderabad

SCHEME OF INSTRUCTION AND SYLLABI UNDER CBCS FOR B.E. (ECE) V and VI Semesters With effect from 2025-26 (For the batch admitted in 2023-24)

(R-23)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING Phones: +91-40-23146040, 23146041

Fax: +91-40-23146090

Institute Vision

Striving for a symbiosis of technological excellence and human values

Institute Mission

To arm young brains with competitive technology and nurture holistic development of the individuals for a better tomorrow

Department Vision

Striving for excellence in teaching, training and research in the areas of Electronics and Communication Engineering and fostering ethical values

Department Mission

To inculcate a spirit of scientific temper and analytical thinking and train the students in contemporary technologies in Electronics and Communication Engineering to meet the needs of the industry and society with ethical values

B.E	(ECE) Program Educational Objectives (PEO's)
PEO I	Graduates will be able to identify, analyze and solve engineering problems.
PEO II	Graduates will be able to succeed in their careers, higher education, and research.
PEO III	Graduates will be able to excel individually and in multidisciplinary teams to solve industry and societal problems.
PEO IV	Graduates will be able to exhibit leadership qualities and lifelong learning skills with ethical values.

	D.E. (ECE) DROCDAM OUTCOMES (DO/-)
Engine	B.E. (ECE) PROGRAM OUTCOMES (PO's) eering Graduates will be able to:
PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
PO3	Design / development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal and environmental considerations.
PO4	Conduct investigations of complex problems: Use research based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
PO5	Modern tool usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and team work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, give and receive clear instructions.
PO11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Lifelong learning: Recognize the need, and for have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

B.E	(ECE) PROGRAM SPECIFIC OUTCOMES (PSO's)
PSO I	ECE students will be able to analyze and offer circuit and system level solutions for complex electronics engineering problems, keeping in mind the latest technological trends.
PSO II	ECE students will be able to apply the acquired knowledge and skills in modeling and simulation of communication systems.
PSO III	ECE students will be able to implement signal and image processing techniques for real time applications.

CO5	3	2		2									3	1	1

UNIT - I:

8086 Architecture: 8086 Architecture, Register Organization, Memory segmentation, Pin configuration, latching of address bus, Buffering of data bus. Minimum and Maximum mode operations; control signal interfacing for read and write operations; Organization of stack, Interrupt Vector Table

UNIT - II:

8051 Microcontroller and On chip Programming using embedded C: Architecture of 8051, Pin configuration, built-in ROM & RAM organization, Stack organization, Addressing modes Instruction set of 8051. 8051 Timers in different modes Programming in all modes, 8051 Serial data communication and Programming, Interrupt programming

UNIT - III:

8051 Microcontroller and OFF chip Programming using embedded C

Off-chip EPROM, SRAM, Sensor interface— ADC0804, ADC0808; DAC interface, Interfacing Seven-segment display, 2x16 LCD, 4x3 Matrix Keyboard, DC Motor, Stepper Motor. Interfacing and programming

UNIT - IV:

ARM Architecture, Exceptions and Interrupts: Evolution of ARM architecture, ARM's role in embedded systems and real-time applications, ARM Core Data flow model, Overview of ARM processor modes, General purpose registers and special registers, ARM Cortex-A vs Cortex-M. Exceptions and Interrupt Handling, Interaction between CPU and interrupt controller in ARM SoCs.

UNIT - V:

ARM Memory Management & Policies, Applications: Addressing modes (physical vs virtual addresses), Virtual memory concepts and paging basics, Memory Management Unit (MMU) role and configuration, Typical memory map layout on ARM Cortex-A SoCs. Memory Management Policies: Page replacement algorithms (LRU, FIFO, Clock), Memory allocation strategies (contiguous, paging, segmentation).

AI Relevance: AI-assisted branch prediction and pipeline scheduling, Machine learning for memory hierarchy optimization, Introduction to NPUs and neural accelerators in ARM SoCs, AI in hardware security and anomaly detection.

Learning Resources:

CO3	2	3	3										3		
CO4	2	3	3	3									3		
CO5	2	3	3										3		

UNIT - I:

IC Amplifiers: Differential amplifier modes, basic current mirror, Wilson MOS mirror, Cascode amplifier (common source), Operational Transconductance amplifier.

UNIT - II:

Integrated Circuits and Op-Amp Applications: Chip Size and Circuit Complexity, Ideal and Practical Op-Amp, Op-Amp Characteristics - DC, AC-Slew Rate and Frequency Response, 741Op-Amp, Modes of Operation: Inverting, Non-Inverting and Differential.

Op-Amp Applications: Basic Applications of Op-Amp, Instrumentation Amplifier, Sample & Hold Circuits, Differentiators and Integrators, Comparators, Schmitt Trigger.

UNIT - III:

555 Timers: Functional Diagram, Monostable, Astable Operations and

Applications.

IC Regulators: Analysis and design of fixed voltage regulators & IC 723 voltage regulator

UNIT - IV:

Data convertors: Basic DAC Techniques – Weighted Resistor Type, R-2RLadder Type, Inverted R- 2R Type DAC's Different types of ADCs – Parallel Comparator Type, Successive Approximation Register Type and Dual Slope Type.

UNIT - V:

Logic Families: Classification of Digital Integrated Circuits, Standard TTL NAND Gate-Analysis, Tristate TTL, CMOS Tristate Outputs. Comparison of various Logic Families.

Digital IC Applications: TTL & CMOS 74XX Series ICs: BCD to 7-segment decoder/driver - 7447, IC Counters – 74163 & 7490, Shift Registers – 7495.

CO4	2	3		3	2		3							3	
CO5	2	2	2	2	3			3	3	3	3		•	3	3

UNIT - I:

Amplitude modulation: Principle of modulation, Quantitative analysis of amplitude modulation: AM, DSBSC, SSBSC. Square law modulator, Switching Modulator, Square law detector, Envelope detector. Balanced modulator, Ring modulator, coherent detection of DSBSC. Generation of SSBSC and coherent detection of SSBSC, frequency division multiplexing. Figure of merit and Noise considerations in AM, DSBSC, SSBSC, Costas loop.

UNIT - II:

Angle Modulation: Principle of angle modulation, Phase modulation, frequency modulation, Quantitative analysis of frequency modulation, NBFM, WBFM. Direct method of FM generation, Armstrong method of FM generation, Foster-Sealey detector, Spectrum Analysis of Sinusoidal FM Wave using Bessel functions, Pre emphasis and De-emphasis, Threshold effect in angle modulation, amplitude limiter.

Transmitters and receivers:

Functions of a transmitter and receiver. TRF receiver, Super heterodyne receiver: Intermediate frequency, Image frequency, AGC.

UNIT - III:

Pulse Modulation: Principles of Pulse modulation- generation and detection of PAM, Aperture effect, Generation and detection of PWM and PPM signals. Quantization, Types of quantization, Companding, Pulse code modulation (PCM), Delta modulation, Adaptive delta modulation, Time Division multiplexing. Noise considerations in PCM and DM.

UNIT - IV:

Digital communication: Baseband Pulse Transmission- Inter symbol Interference, Eye diagram, Error vector magnitude, Pass band Digital Modulation schemes- ASK, PSK, FSK, M- ary signaling. Generation and detection of digital modulation techniques. Optimum detection of signals in noise, Coherent receiver, matched filter -Probability of Error evaluations.

UNIT - V:

Error Control Coding: Types of transmission errors, need for error control coding, Source coding, Shannon – Fano algorithm and Huffman coding. Coding efficiency, Linear Block Codes (LBC):, Encoder, Syndrome and error detection, Convolutional code: Encoder, Decoder. AI-Powered Advancements in Digital Communication, Channel estimation, Error detection and correction, Noise analysis.

Guidelines for course based projects:

- Batch size shall be 3 to 4 students per batch.
- Project topics may be chosen by the student with advice and approval from the faculty members offering the course.
- Students have to submit a one-page abstract in the beginning of project work
- Output of the course based project should be demonstrable / measurable / outcome based.
- Finalization of the project topics, batches formation and project review schedule should be completed by the end of week-2. Project work will be carried out by the students from week-3 onwards.
- One review will be conducted for evaluating the project from week-10 to week-13 as per the schedules announced.
- Students will give a 20 minutes presentation through power point presentation followed by a 10 minutes discussion.
- Students are required to submit project report.

Assessment and Evaluation of Course Based Project:

The total marks should be a maximum of five (05) earmarked for Course-based project. The marks secured by the students in the respective Course-based project should be considered in lieu of one assignment i.e., for five marks. However, the total marks towards assignment marks for that course should be the average of marks secured in the other two assignments and marks secured in the Course-based project.

UNIT-I:

Antenna Basics: Principles of radiation-single wire, two wire, current distribution on a thin wire antenna, retarded potential, isotropic radiator. Antenna parameters: Radiation pattern, Beam area, Beam efficiency, radiation intensity, Antenna temperature, Antenna field regions, Gain, directivity, Antenna Polarization, effective length, Antenna Impedance, effective aperture and aperture efficiency, Friis transmission equation.

UNIT-II:

Analysis of wire Antennas: Infinitesimal dipole, region separation, Half

wave dipole, quarter wave mono pole, Ground effects, small circular loop Antenna.

ADS tool flow to carryout course based project.

UNIT-III:

Antenna Arrays: Introduction, Point sources, Array of two isotropic point sources, Linear Arrays of N isotropic point sources of equal amplitude and spacing, principle of pattern multiplication, Broad Side Array, End Fire Array, Binomial Array, Optimization of antenna arrays using AI tools to avoid grating lobes

UNIT-IV:

VHF, UHF and Microwave Antennas: Helical Antenna-Geometry, Helix modes, Design considerations for Helical Antenna, Horn Antenna, Parabolic Reflector Antenna, Yagi-Uda Array. Micro strip Antenna- Basic characteristics of micro strip antenna, feeding methods, Advanced antennas for spacecraft applications. Introduction to Fractal antenna.

UNIT-V:

Smart Antennas and Wave Propagation: Basic Concepts of Smart Antennas, types of smart antennas Different modes of Radio Wave propagation: Ground wave propagation, Sky wave propagation and Space wave propagation. Introduction to EMI/EMC.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Microprocessors and Microcontrollers Lab

SYLLABUS FOR B.E. (ECE) V - Semester

L:T:P (Hrs./week): 0:0:2	SEE Marks: 50	Course Code: U23PC511EC
Credits: 1	CIE Marks: 30	Duration of SEE: 3 Hours

COURSE OBJECTIVES 1. To provide hands-on experience with 8086 microprocessor assembly language programming, including arithmetic, data transfer, string operations, and sorting.

- To explore Embedded C programming for the 8051 microcontroller, including arithmetic/logical operations, timer programming, serial communication, and interrupt handling.
- To develop practical skills in interfacing external devices (motors, LCD, keypad, DAC) with the 8051 microcontroller using Embedded C and simulation tools (Keil IDE & Proteus).
- 4. To enable students to understand and apply low-level programming concepts of the ARM architecture by developing and simulating assembly language programs focusing on arithmetic, logical operations, addressing modes, and control flow using QEMU, thereby laying a strong foundation for bare-metal and embedded system development.
- To foster problem-solving skills by engaging students in course based projects, where they apply learned skills to interface sensors, actuators, and communication protocols on the ARM Development platforms.

COURSE OUTCOMES On completion of the course, students will be

- Write and execute assembly programs on the 8086 microprocessor for arithmetic operations, data transfer, and string manipulations.
- Develop Embedded C programs for the 8051 microcontroller to implement arithmetic/logical operations, timers, UART serial communication, and interrupt handling.
- Interface peripherals (stepper motor, DC motor, LCD, keypad, DAC) with the 8051 microcontroller using Keil IDE and Proteus simulation software.
- Demonstrate the ability to develop, simulate, and debug ARM assembly language programs involving arithmetic, logical operations, addressing modes, and control flow using QEMU on a Linux/Windows environment.
- Design and implement a course based project using ARM Based Development Boards to demonstrate IoT communication, actuator control, and sensor data processing.

CO-PO/PSO Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO4	2	2	1	1	3			2	2				3	1	1
CO5	2	2	3	3	3	2		3	3	3	3	2	3	1	1

Cycle - I:

Assembly language programming for 8086 µP using Assembler

- 1. Execution of basic programs on 8086 microprocessor (8 bit and 16 bit arithmetic operations).
- 2. Programs for data transfer, String searching and sorting

Embedded C programming for 8051 µC using Keil IDE

- 3. Programs related to arithmetic, logical and Shift Instructions.
- 4. Timer programming.
- 5. Serial communication using UART protocols
- 6. Interrupt Programming

Cycle-II

Embedded C programming with 8051 using Keil IDE & Proteus for off chip peripheral interface

- 7. Interfacing motors- DC and Stepper
- 8. LCD display interfacing.
- Matrix Keypad interfacing.
- 10. DAC Interfacing with 8051µc

ARM Programming Using QEMU/ARM Simulator

- 11. Assembly language programs on arithmetic and logical operations
- 12. ARM Addressing modes and Branching Instructions

Course-Based Project: Students need to Carryout Course Based project using ARM development board/ ARM Processor boards. Course based projects related to: LED and Button Interfacing/Sensor Interfacing/Actuator Control / IoT Data Upload.

Guidelines for course based projects:

- Batch size shall be 3 to 4 students per batch.
- Project topics may be chosen by the student with advice and approval from the faculty members offering the course.
- Students have to submit a one-page abstract in the beginning of project work
- Output of the course based project should be demonstrable / measurable / outcome based.
- Finalization of the project topics, batches formation and project review schedule should be completed by the end of week-2. Project work will be carried out by the students from week-3 onwards.
- One review will be conducted for evaluating the project from week-10 to week-13
 as per the schedules announced.
- Students will give a 20 minutes presentation through power point presentation followed by a 10 minutes discussion.
- Students are required to submit project report.

The break-up of CIE:

1.	No. of Internal Test	:	1
2.	Marks earmarked for Course-based Project	:	05
3.	Marks earmarked for day-to-day lab class assessment	:	13
4.	Marks earmarked for lab internal test	:	12

CO4	3	3			3			2	3				3		
CO5	3	3	3	3	3			2	3				3		

CYCLE - I Experiments

- 1. Op-Amp Amplifiers: Inverting and Non-Inverting Amplifiers, Voltage Follower using Op-Amp.
- 2. Arithmetic Circuits: Summer, Integrator & Differentiator suing Op-Amp.
- 3. Triangle and Square wave Generators using Op-Amp.
- 4. IC Regulators and current boosting.
- 5. Applications of 555Timer.
- 6. Interfacing counters with 7-segment LED/LCD display units.

CYCLE - II Experiment

Simulation experiments using Cadence tool

- 1. Simulate two inputs CMOS NAND gate and plot its transfer characteristics.
- 2. Design and simulate Wilson Current mirror.
- 3. Design and simulate operational transconductance amplifier
- 4. Design and Simulate Schmitt trigger using Op-Amp
- 5. Simulate sample and hold circuit using Op-Amp.
- 6. Design and simulate R-2R ladder DAC

General Note:

- 1. Atleast 5 experiments from each part.
- 2. A total of not less than 10 experiments must be carried out during the semester.
- 3. Analysis and design of circuits, wherever possible, should be carried out using SPICE tools.

New / Additional experiments planned:

- 1. Simulate and analyze the behavior of a tristate CMOS inverter
- 2. Design and simulate flash type ADC

Mini Project(s):

Implementation/simulation of mini projects using linear and digital ICs.

Cycle-I

- 1. (i) Modulation and demodulation of DSB with full carrier.
 - (ii) AM radio signal reception using Superheterodyne receiver
- 2. (i)Generation of DSBSC and SSBSC signals and demodulation.
 - (ii) Frequency division multiplexing and demultiplexing
- 3. (i) Modulation and demodulation of FM Signal
 - (ii) FM signal reception using Superheterodyne receiver
- 4. (i)Characteristics of Pre emphasis and deemphasis
 - (ii) Spectrum analyzer and analysis of AM, FM signals
- 5. (i) Generation and detection of PAM signals

- (ii)Time division multiplexing of PAM signals
- 6. (i)Generation and detection of PWM signals (ii)Generation and detection of PPM signals

Cycle- II:

Simulation using MATLAB/Communication Toolbox/Simulink

- 7. Modeling and Simulation of a PCM Communication System
- 8. Simulation of ASK/PSK/FSK Transceiver Systems in Simulink
- 9. Implementation of AGC for Dynamic Signal Conditioning in Receiver Systems
- Estimate Symbol Rate/Bit error rate for QAM Modulation in AWGN Channel in MATLAB
- 11. End to end simulation of 8-PSK communication system in MATLAB
- 12. Modeling QPSK Modulation Scheme and evaluating its performance in noisy environments

General Note:

- 1. At least 5 experiments from each part.
- 2. A total of not less than 10 experiments must be carried out during the semester.

New / Additional experiments planned:

- 1. Introducing SystemVue tool for signal analysis.
- 2. Wireless transmission of signals using SDR platform.

Learning Resources/ Tools:

Tools: MATLAB, Simulink, SystemVue

CO4	2					2						3			
CO5									3	3	3				

Note: COs must be mapped with one of the relevant PSOs based on the domain of the project.

The students are required to carry out mini projects in relevant areas of electronics communication engineering such as Electronic Devices and Circuits, Embedded Systems, RF, Microwave and Wireless Communications, Communication Systems, Signal, Image and Video Processing, VLSI, Networking.

Students are required to submit a report on the Mini Project.

- > Batch size shall be 2 (or) 3 students per batch.
- > Allocation by department.

- > Two reviews One during 6th week and another during 12th week and final evaluation shall be conducted at the end of the semester.
- > Students are required to give Presentations / Demonstration of the work during the reviews.
- Students are required to submit the report.

Grades awarded to the Mini Project - II

Outstanding	_	≥ 45 marks
Excellent	_	\geq 40 - 44 marks
Very Good	_	\geq 35 - 39 marks
Good	_	\geq 30 - 34 marks
Average	_	≥ 25 - 29 marks

Continuous Internal Evaluation (CIE) – 30 marks:

Evaluation Criteria	Maximum Marks
Literature Survey	6
Problem Formulation	6
Design / Methodology	6
Implementation & Results	6
Presentation & Documentation	6

Semester End Examination (SEE) – 50 marks:

Evaluation Criteria	Maximum Marks
Literature Survey	10
Problem Formulation	10
Design / Methodology	10
Implementation & Results	10
Presentation & Documentation	10

Note: Rubrics are used for assessment and evaluation.

UNIT-I:

Review of electrical characteristics of MOSFET: CMOS inverter: VTC, switching threshold, noise margin, robustness, propagation delay, static and dynamic power dissipation. Static CMOS design: complementary CMOS, Ratioed logic, pass transistor logic.

Dynamic CMOS design: Dynamic logic, domino logic.

UNIT-II:

Introduction to CMOS fabrication process: Twin tub Process, latch up in CMOS circuits. CMOS circuit physical design process: MOS Layers, Stick diagrams, Euler Path in stick diagram, Design rules, types of design rules, Layout diagrams of Basic CMOS Logic gates.

UNIT-III:

CMOS Subsystem design: Architectural issues, Carry select adder, carry save adder and Carry Skip adder, Multiplication: array multiplication, Wallace tree multiplication. Multiplexer and D Flip-Flop using Transmission gates.

UNIT-IV:

Design of Basic Memory Cells: Classifications of Memories, one and three transistor dynamic RAM cells, six transistor Static RAM, static noise margin. Read only memory: Basic ROM architecture, EPROM, EEPROM, NOR and NAND based ROM Memory Design.

UNIT-V:

CMOS testing: Role of testing, types of testing, functionality tests, manufacturing tests, stuck-at faults, short circuit and open circuit faults, controllability, observability, delay fault testing, level sensitive scan design, Boundary scan architecture.

Learning Resources:

- Digital Integrated Circuits: A Design Perspective Jan M. Rabaey, Anantha Chandrakasan, Borivoje Nikolić. 2nd edition.

Introduction to Computer Organization and architecture, Digital arithmetic algorithms for Addition, Subtraction, Multiplication using Booth's algorithm and using restoring and non restoring algorithms. Floating point representation with IEEE standards and its arithmetic operations. General Register Organization, Stored Program Organization, Instruction formats-Zero, One, Two and Three-Address instructions

UNIT-II:

Introduction to GPU and Basic Processor Organization:

Introduction to GPU Architecture: Evolution of GPUs, GPU Memory model, Memory Hierarchy, GPU Processing Vs CPU Processing

Instruction cycle: Fetch and Decode, Register reference instructions; Memory

reference instructions and Input-output instructions. Hardwired control unit, Micro programmed Control organization, address sequencing and micro program sequencer.

UNIT-III:

Pipelining and Parallelism:

Features of CISC and RISC and their comparison, Amdhal's law, Concept of Pipelining, Data path and control path pipelining, Design of Arithmetic pipeline, Instruction Pipeline, performance issues in pipelining, Pipeline hazards, and techniques of Reducing pipeline branch penalties. Concept of parallelism, vector processors, Array processors. Advanced superscalar computers and vector computers.

UNIT-IV:

Input-Output Organization:

I/O Bus and interface modules, I/O versus Memory Bus, Asynchronous data transfer: Strobe control, Handshaking, Asynchronous serial transfer. Modes of Transfer: Programmed I/O, Interrupt driven I/O, Priority interrupt; Daisy chaining, Parallel Priority interrupt. Direct memory Access, DMA controller and transfer. Input output Processor, CPU-IOP communication.

UNIT-V:

Memory Organization:

Memory hierarchy, Mapping of memory with CPU, Primary memory, Concept of memory interleaving, Associative memory, Cache memory organization and performance measures, cache mapping functions, Virtual memory organization, paging mechanism, address mapping using pages, Memory management hardware, Introduction to Multilevel Memories, Concept of cache Coherence

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Real Time Operating Systems

(Professional Elective-I)
SYLLABUS FOR B.E. (ECE) VI - SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: U23PE610EC
Credits: 3	CIE Marks: 40	Duration of SEE : 3 Hours

COURSE OBJECTIVES COURSE OUTCOMES On completion of the course, students will 1. To impart foundational understanding of Real-Time Operating Systems (RTOS), be able to 1. Describe the features and architecture emphasizing QNX Neutrino's microkernel architecture and its suitability for timeof real-time operating systems and analyse the advantages of QNX critical embedded applications. microkernel design. 2. To familiarize students with POSIX 2. Apply POSIX APIs to create and standards and real-time task management manage threads and implement realin QNX, enabling the development of time scheduling policies in QNX. portable and deterministic software 3. Implement inter-process systems. communication and synchronization 3. To equip students with the ability to design using QNX message passing and POSIX and implement efficient inter-process IPC mechanisms. communication and synchronization 4. Analyse and manage memory and file mechanisms using QNX messaging and systems for real-time applications using POSIX IPC. QNX memory management and POSIX 4. To develop competence in managing file I/O. memory and file systems in QNX, including 5. Design, deploy, and debug QNX-based allocation, dynamic virtual memory embedded systems with device mapping, and real-time file I/O operations. interfacing and system profiling tools. 5. To enable students to interface hardware and external devices with QNX, analyse system behaviour using profiling tools, and deploy ONX-based solutions on embedded

ARM platforms.

CO-PO/PSO Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	2	2	2		2								2		
CO3	2	2	2		2								2		2
CO4	2	2	2	2	2								2		
CO5	2	2	3		2	2						3	2		

UNIT-I: Introduction to RTOS and QNX Neutrino Architecture:

Real-Time System Requirements: Determinism, Latency, Throughput, RTOS vs General-Purpose OS; QNX Overview: Features, Architecture, Microkernel Design; QNX Software Development Platform (SDP) and Momentics IDE, System Boot

Process and Image Filesystem (IFS), Comparison with other RTOS: FreeRTOS, VxWorks, RT-Linux.

UNIT-II: POSIX Compliance and Task Management in QNX

POSIX Standards for RTOS: Threads, Scheduling, IPC, File I/O

QNX POSIX Conformance Levels, POSIX Thread Management (pthreads), Thread Creation, Attributes, Priorities, Scheduling Policies: FIFO, Round Robin, Sporadic etc.

Real-Time Clocks and Timers, Thread Affinity and Real-Time Determinism.

UNIT-III: Interprocess Communication and Synchronization

POSIX IPC Mechanisms: Semaphores, Shared Memory, Message Queues, QNX Message Passing APIs: MsgSend, MsgReceive, MsgReply, Pulses and Signals in QNX, Synchronization Tools: Mutexes, Condition Variables, Race Conditions and Deadlock Prevention, IPC Performance Considerations for Real-Time Systems.

UNIT-IV: Memory Management and File Systems in QNX

Virtual Memory and Address Space in QNX, Memory Mapping (mmap), Allocation (malloc), and Locking, Memory Partitioning and Protection, Filesystems in QNX: QNX4, QNX6, FAT, DevFS, File I/O APIs and POSIX Conformant File Operations, Debugging Memory Leaks and Performance Bottlenecks

UNIT-V: Device Management, Embedded Deployment & Case Studies

Resource Managers: Concept, Implementation, and Custom Devices

Device I/O using devctl, io_* APIs, Interrupt Handling in QNX: ISR and Threaded Interrupts.

Deploying QNX on ARM Cortex-A SoCs like Raspberry Pi,BSP (Board Support Package) and Boot Configuration, Performance Monitoring Tools: pidin, System Profiler, slogger.

Industrial Applications: Automotive (ADAS), Industrial Automation, Medical

Real Time Operating Systems Lab

(Professional Elective-I)
SYLLABUS FOR B.E. (ECE) VI - SEMESTER

L:T:P (Hrs./week) : 0:0:2 SEE Marks : 50 Course Code: **U23PE611EC**Credits : 1 CIE Marks : 30 Duration of SEE : 3 Hours

CO-PO/PSO Mapping

	DO1	DOO	DO3	DO4	DOE	DOG	DO7	$D \cap O$	DOO	DO10	DO11	PO12	DCO1	DC ()	DCO2
	PUI	PUZ	203	P04	PU3	200	PO/	200	PU9	POIU	POII	PUIZ	P301	P302	P3U3
CO1	3	2	1		3			2					2		
CO2	3	2	1		3			2					2		
CO3	3	2	1		3			2					2		
CO4	3	2	1		3			2					2		
CO5	3	2	1	2	3	2		3	3	3	3	3	2		

Cycle - I:

- 1. Write and deploy RTOS applications on QNX
- 2. Create and manage real-time threads with priorities
- 3. Implement inter-process communication using message passing
- 4. Use pulses and signals to trigger thread actions

- 5. Shared memory communication between processes
- 6. Develop a resource manager for a virtual device

Cycle-II

- 1. GPIO control from user space using QNX on Raspberry Pi or ARM SoC
- 2. Real-time scheduling: compare FIFO and RR through example
- 3. Interface a sensor (e.g., temperature/ultrasonic) and log data
- 4. Debugging with Momentics IDE: setting breakpoints and analyzing thread behavior

Course-based Project: Students are required to carry out a Mini Project using the Raspberry Pi development board, which involves designing and implementing a Real-Time Operating System (RTOS) application that effectively combines multithreading, inter-process communication (IPC), and hardware control.

Guidelines for course based projects:

- Batch size shall be 3 to 4 students per batch.
- Project topics may be chosen by the student with advice and approval from the faculty members offering the course.
- Students have to submit a one-page abstract in the beginning of project work
- Output of the course based project should be demonstrable / measurable / outcome based.
- Finalization of the project topics, batches formation and project review schedule should be completed by the end of week-2. Project work will be carried out by the students from week-3 onwards.
- One review will be conducted for evaluating the project from week-10 to week-13 as per the schedules announced.
- Students will give a 20 minutes presentation through power point presentation followed by a 10 minutes discussion.
- Students are required to submit project report.

The break-up of CIE:

The total marks should be a maximum of five (05) for Course-based project and are to be taken from the total CIE marks of the concerned lab course and accordingly, the new break-up for the award of lab CIE marks is as follows:

1.	No. of Internal Test	:	1
2.	Marks earmarked for Course-based Project	:	05
3.	Marks earmarked for day-to-day lab class assessment	:	13
4.	Marks earmarked for lab internal test	:	12

Duration of Internal Test: 3 Hours

COURSE OUTCOMES

semiconductor devices and materials.

VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS) ACCREDITED BY NAAC WITH 'A++' GRADE IBRAHIMBAGH, HYDERABAD – 500 031

CO4	3	2	3	3	2	2						3	3		
CO5	3	3		2	3							3	3		

UNIT-I:

CO-PO/PSO Mapping

Fundamentals of Semiconductors: Crystal lattices, Bulk crystal Growth, Epitaxial Growth, Bonding forces and energy bands in solids, Charge carriers in semiconductors, Carrier concentrations, Drift of carriers in Electric and Magnetic Fields, Hall effect, Fermi level at equilibrium, Intrinsic vs Extrinsic semiconductors, Excess carriers in semiconductors, Diffusion and recombination, Diffusion length, Properties of Silicon and compounds, Gallium Arsenide, Metals used in IC fabrication.

UNIT-II:

Fabrication Techniques I: Top-Down and Bottom-Up Approach, Wafer Cleaning, Silicon Oxidation Techniques: Thermal Oxidation process, Deal-Groove model of oxidation, types of oxidation techniques, growth mechanism, factors affecting the growth mechanisms, dry & wet oxidation. Film deposition: Chemical Vapour deposition, Physical Vapour deposition, Polysilicon deposition, Dielectric deposition.

UNIT-III:

Fabrication Techniques II: Diffusion: Basic diffusion process, Extrinsic diffusion, Lateral diffusion, Ion Implantation: Range of Implanted Ions, Implant damage and Annealing, Tilt- Angle Ion Implantation. Photolithography: Optical lithography, Photoresists, Masks, Pattern Transfer. Etching: Wet Chemical Etching, Dry Etching, Isotropic and Anisotropic etching.

UNIT-IV:

CMOS FinFET: Basic MOS Capacitor, MOSFET fabrication process, CMOS Technology, Challenges of STI versus LOCOS, FinFET architecture, Gate first versus gate last, contact resistance issues of simple metal-silicon contact, metal silicides, salicidation, evolution from Ti to Co to Ni silicide, Damascene and dual-Damascene process.

UNIT-V:

Characterization Techniques: Resistivity: Two-Point versus Four-Point Probe, Carrier and doping density: Capacitance-Voltage (C-V) characterization, Current-Voltage characterization, Optical characterization: Introduction to Ellipsometry, Scanning probe microscopy: SEM, TEM and AFM.

Experiments:

- 1. Generating and Visualizing Signals using GNU Radio
- 2. Implement an amplitude modulation (AM) transmitter and receiver using GNU Radio blocks.
- 3. BPSK (Binary Phase Shift Keying) Modulation and Demodulation using

- GNU Radio blocks.
- 4. QPSK (Quadrature Phase Shift Keying) Modulation and Demodulation using GNU Radio blocks.
- 5. Design of Digital filter for removing of noise
- 6. Design of Signal Recording and Playback
- 7. Receiving and Demodulating FM Radio Signals using RTL SDR
- 8. Exploring the Radio Spectrum using RTL SDR
- 9. Design of FM transmitter and using Pluto SDR
- 10. Experiment with different modulation schemes and observe the impact on communication performance using Pluto SDR
- 11. Implement a frequency-shift keying (FSK) transmitter and receiver using USRP.
- 12. Experiment with different modulation schemes and observe the impact on communication performance using USRP

New / Additional experiments planned:

- 1. Implement a simple OFDM transmitter by dividing the data stream into subcarriers using a Packet Packer block.
- 2. Implement a DTMF decoder in GNU Radio to identify the dialled digits based on the received frequencies.
- 3. Software Defined Radio (SDR) for GSM Signal Analysis using Pluto SDR.
- 4. Implement a real-time spectrum analyzer using USRP and GNU Radio for spectrum monitoring applications.

Mini Project(s):

Capture LoRa packets used in various IoT applications.

Learning Resources:

1. GNU radio

- 6. Generate Feedforward Neural Network

Cycle-II

- 1. Feedforward Neural Network with gradient descent and variable learning rate gradient descent.
- 2. Neural Network for Binary Classification
- 3. Neural Network for Multi Classification
- 4. Neural Network for Regression problem
- 5. Handwritten digit recognition using Neural Network
- 6. Image classification using Convolutional Neural Network

New/ Additional experiments planned:

- 1. Machine Learning using Neural Networks
- 2. Deep Learning using Neural Networks

Learning Resources/Tools

- 1. MATLAB 2023a.
- 2. B. Yegnanarayana Artificial neural network PHI Publication.2012.
- Kevin L. Priddy, Paul E. Keller Artificial neural networks: An Introduction -SPIE Press, 2005

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Voice and Data Networks

(Professional Elective-I) SYLLABUS FOR B.E. (ECE) VI - SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: U23PE650EC				
Credits: 3	CIE Marks: 40	Duration of SEE: 3 Hours				

COURSE OBJECTIVES To understand fundamental network design principles, performance issues, and terminology associated with voice

To explore network architectures including layered models, cross-layer designs, and switching mechanisms in voice and data networks.
 2

and data communication.

- 3. To analyze the role of data and control planes in the network layer and examine routing protocols and SDN fundamentals.
- To apply queuing and traffic models for analyzing network performance, and understand medium access control in local area networks.
- 5. To provide a comprehensive understanding of VoIP systems, including their architecture, protocols, echo management, performance metrics, and Quality of Service (QoS) techniques.

COURSE OUTCOMES

On completion of the course, students will be able to

- Identify and describe key network design and performance issues relevant to centralized and distributed systems.
- 2 Apply switching techniques and layered architectures used in wired and wireless voice/data communication.
- 3 Demonstrate the ability to configure routing protocols and explain the fundamentals of software-defined networking.
- 4 Apply queuing theory and Markov models to evaluate the performance of traffic in various network scenarios.
- 5 Analyze and evaluate VoIP technologies and protocols, and apply QoS mechanisms to ensure efficient and reliable voice communication over IP networks.

CO5	3	3				2						2		3	3

UNIT - I

Network requirements, Network Performance parameters, Network Terminology, Voice and data networks, Issues in design of voice and data networks. Network architecture, Network software.

UNIT – II

Switching, Three Stage Space Division Switch, Blocking and Non-blocking switching, Introduction to Signaling System Number 7 (SS7), Circuit Switching and Packet Switching, Multiplexing.

UNIT - III

Network layer-date plane: Input and output processing, input and output queuing, packet scheduling. Control plane: Routing in Internet. OSPF, BGP,RIP,NAT, Software defined networking (SDN) fundamentals

UNIT-IV

Queuing Models of Networks, Traffic Models, Little's Theorem, Markov chains, M/M/1 and other Markov systems, Examples of LAN, Types of VLAN, Trunking, Advantages.

UNIT-V

Introduction to VOIP, VOIP architecture and components, VOIP protocols-SIP,H.23,RTP,RTCP, Echo cancellation, metrics: latency, jitter, packet loss, QoS techniques: DiffServ, IntServ, RSVP, security in VOIP

UNIT-1: Vocabulary- Reading for Content and Context Overview:

This course is designed for students to not just understand the importance of vocabulary but also to build on it by using the appropriate tools and methods. After which they will be able to solve vocabulary based questions and also use vocabulary as a tool to solve problems.

- 1.1 Concepts & Context Rules: Collocations & Phrasal Verbs
- 1.2 Prefixes/ Suffixes & Root Words
- 1.3 Phrases & Idioms; Questions based on it
- 1.4 One Word Substitution; Questions based on it
- 1.5 Antonyms, Synonyms & Incorrect Word Usage

UNIT-2: Fill in the Blanks- Applying Content and Context Overview:

This course is designed for students to identify the clue/ theme words in sentences, then understand the context in which the words are used and finally apply concepts like collocation, antonyms, and synonyms to solve questions.

- 2.1 Concepts & Rules: Single Fill in the Blanks
- 2.2 Double/ Triple Fill in the Blanks
- 2.3 Cloze Test

UNIT-3: Jumbles

Overview: This course is designed to develop and improve reading and study skills needed for college work. Topics include identifying main idea and supporting details, determining author's purpose and tone, distinguishing between fact and opinion, identifying patterns of organization in a sentence or passage and the transition words associated with each pattern, recognizing the relationships between words and sentences, identifying and using context clues to determine the meanings of words, identifying logical inferences and conclusions.

- 3.1 Concepts- Purpose, Tone, Point of view
- 3.2 Para jumbles
- 3.3 Jumbled Sentences

UNIT-4: Critical Reading Skills

Overview: Research shows that good reading skills can lead to well written assignments. In this unit, students will learn, develop and improve reading and study skills needed for college work. Building on these basic strategies, students will develop skills to critically analyze texts and then the ability to identify its theme.

- 4.1 Concepts- Basic Introduction & Short Passages
- 4.2 Article & Article Based Passages
- 4.3 Theme Detection

UNIT-5: Spotting the Errors

Overview: In this unit students will focus on identifying errors in sentences, rectifying them and improving the quality of sentences. Building on these skills will also have an impact on the written and spoken skills of students since they will be aware of the common and often made errors and therefore be able to avoid them while using language.

- 5.1 Concepts- Basic Introduction & Sentence Fillers
- 5.2 Spot the Errors
- 5.3 Sentence Improvement

METHODOLOGY

ASSESSMENTS

- Demonstration

- Online assignments

- Presentations

- Individual and Group

- Expert lectures
- Writing and Audio-visual lessons

CO4	2					2						3			
CO5									3	3	3				

Note: COs must be mapped with one of the relevant PSOs based on the domain of the project.

Guidelines for theme based projects

- Batch size shall be 2 (or) 3 students per batch.
- Allocation by department based on their academic performance.

- Themes shall be different for each batch i.e., sometimes main theme
 may be same, but sub topic shall be independent as for as possible.
 In case of big size theme, part of the theme can be allotted to
 different groups for final integration.
- Output of the theme based project should be demonstrable / measurable / outcome based.
- Two overall coordinators for each section for theme based project supervision and faculty supervisors for different batches should be assigned.
- Two reviews one after six weeks and another one after twelve weeks and final evaluation shall be conducted at the end of the semester.

GEO SPATIAL INFORMATION TECHNOLOGY

(Open Elective-III) SYLLABUS FOR B.E. V SEMESTER

L:T:P (Hrs./week):3:0:0	SEE Marks:60	Course Code: U230E510CE
Credits: 3	CIE Marks:40	Duration of SEE:3 Hrs

COURSE OBJECTIVES	COURSE OUTCOMES
Objectives of this course are to 1. To provide fundamental knowledge on geo spatial technology such as Remote sensing GPS and GIS.	Upon the completion of the course, students are expected to 1. Explain the fundamental principles of remote sensing, including EMR spectrum, radiation interactions, and spectral reflectance characteristics, and identify their applications in observing and analyzing earth surface features. 2. Identify and differentiate various remote sensing systems, satellite characteristics, image types, and digital data formats used in visual interpretation, and understand their applications in fields such as agriculture, water resources, urban planning, and disaster management. 3. Describe the structure and operational principles of GPS and other GNSS systems, and recognize their practical applications. 4. Analyze sources of GPS errors, evaluate position accuracy using DOP/UERE, apply differential and carrier phase positioning methods. 5. Explain the core concepts of GIS, spatial and non-spatial data types, map projections, and demonstrate methods of data input and editing, along with their applications in spatial analysis, infrastructure planning, and environmental monitoring.

UNIT-I: Introduction and Basic Concepts of Remote Sensing: Introduction, Basic concepts of remote sensing, Airborne and space born sensors, Passive and active remote sensing, EMR Spectrum, Energy sources and radiation principles, Energy interactions in the atmosphere, Energy interactions with earth surface features, Atmospheric windows, Spectral reflectance curves

UNIT-II: Remote Sensing Systems: Satellites and orbits, Polar orbiting satellites, Image characteristics and different resolutions in Remote Sensing, Multispectral, thermal and hyperspectral remote sensing. Some remote sensing satellites and their features, Map and Image, color composites, introduction to digital data, elements of visual interpretation techniques. Applications of Remote sensing in various fields.

UNIT-III: Global positioning Systems (GPS): Overview of GNSS and Introduction to GPS, GLONASS, GALILEO, COMPASS, IRNSS systems, Applications of GPS.

GPS: Basic concepts, Functional system of GPS – Space segment, control segment and user segment, Working principle of GPS, Signal structure and code modulation, Pseudo-range measurements and navigation message

UNIT-IV: Errors and Positioning methods of GPS: Errors and biases in GPS measurements, Accuracy of navigation position: UERE and DOP, Intentional degradation of GPS signals: Selective availability (SA) and Antispoofing (AS) Differential GPS: Space based augmentation systems (e.g., SBAS, GAGAN) and Ground based augmentation systems (e.g., WASS, EGNOS). GPS Carrier Phase measurements: Single Differencing, Double Differencing and Triple Differencing in GPS measurements.

UNIT-V: Basic Concepts of GIS: Introduction to GIS, Areas of GIS application, Components of GIS, Overview of GIS Software packages, Current issues and Trends in GIS. Variables-Point, line, polygon, Map projections, Map Analysis.

GIS Data: Data types – spatial, non-spatial (attribute data) – data structure, data format – point line vector – Raster – Polygon

Data Input: Keyboard entry, Manual Digitizing, Scanner, Remotely sensed data, Existing Digital data Cartographic database, Digital elevation data

Data Editing: Detection and correction of errors, data reduction, edge matching

CO5	3	2		2									3	2	

UNIT-I:

Introduction to operating systems: Definition, User view and System view of the Operating system, Operating system structure, Operating system services.

Process: Process concept, Process Control block, Context switching.

UNIT-II:

CPU Scheduling: Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, Round Robin

Device Management: Disk Scheduling algorithms: FCFS, SSTF, SCAN.

UNIT-III:

5

Memory Management: Swapping, Contiguous memory allocation: Fixed Partitioning, Variable Partitioning. Non-Contiguous memory allocation: Paging.

Virtual memory: Demand paging, Page replacement Algorithms: FIFO, Optimal, LRU.

UNIT -IV:

File System Interface: File Concept, Access Methods: Sequential, Indexed, and Direct

File System Implementation: File-System Structure, Allocation Methods: Contiguous, Linked and Indexed.

UNIT-V:

Deadlocks: System model, deadlock characterization: Mutual Exclusion, Hold and Wait, Non pre-emption, Circular wait. Deadlock Prevention, Deadlock Avoidance: Banker's algorithm.

Essentials of Operating Systems

(GENERAL TRACK: OPEN ELECTIVE-III)

(Common for CIVIL, ECE, EEE & MECH) SYLLABUS OF B.E V- SEMESTER

L:T:P(Hrs./week): 3:0:0	SEE Marks :60	Course Code: U230E510IT
Credits :3	CIE Marks: 40	Duration of SEE :3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES On completion of the course, students will be able to					
Learn the principles of modern operating systems i.e various functionalities provided by an operating system such as process management, memory management, Storage and I/O management.	 Analyze the importance and its key principles by differentiating and categorizing the functionalities of an operatingsystem Examine mechanisms involved in memory management to handle processes and threads. Evaluate and solve deadlocks by assessing various handling strategies related to each of the conditions for deadlock. Interpret the mechanisms adopted for storage organization and access. Interpret the mechanisms adopted for I/O organization and access. 					

UNIT-I: Introduction and Process Management:

Operating System Functionalities, Types of Operating Systems, User Operating System Interface, System calls, System Boot. Process Concept: Overview, Threads. Process Scheduling - Uniprocessor scheduling algorithms, Multiprocessor and Real-time scheduling algorithms.

UNIT-II: Memory Management:

Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation. Virtual Memory Management: Demand Paging, Page replacement algorithms, Thrashing.

UNIT-III: Process Synchronization:

Inter Process Communication, Process Synchronization - Peterson's Solution, Bakery Algorithm, Semaphores, Critical Section, Monitors. Classical problems of synchronization. Deadlocks: Deadlock prevention, deadlock avoidance and Deadlock Detection and Recovery - Bankers Algorithm.

UNIT-IV: Storage Management:

File System-Basic Concepts, File System Structure, File System Mounting, Directory Structure, Allocation Methods, Free Space Management.

UNIT-V: I/O Management:

I/O Management: Disk Structure, RAID Structure, Disk Scheduling, Protection: Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix.

techniques for better	computation.				
optimization for intelligent	5. Define the fuzzy systems, ethics and				
systems.	risks of AI.				

UNIT-I:

Introduction to AI: What is AI, Foundations of AI, History of AI, State of the Art, Applications of AI.

Intelligent Agents: Agents and Environments, Good Behaviour: The Concept of Rationality, The Nature of Environments, The Structure of Agents.

UNIT-II:

Solving Problems by Search: Problem Solving Agents, Example problems, Searching for Solutions, Uninformed Search Strategies: Breadth first search, Depth-first search, Depth limited search, Iterative deepening depth first search

Informed (Heuristic) Search Strategies: Greedy best first search, A* Search, Optimality of A*, Heuristic Functions.

UNIT-III:

Beyond Classical Search: Local search and optimization problems, Local search in continuous spaces, Searching with non-deterministic actions and partial observations.

Adversarial Search: Games, Optimal decisions in games, Alpha-Beta Pruning, Imperfect real time decisions.

UNIT-IV:

Constraint Satisfaction Problems: Defining Constraint Satisfaction Problems, Constraint Propagation, Backtracking Search for CSPs, Local Search for CSPs, The Structure of Problems.

Introduction to Evolutionary Computation: Representation – The Chromosome, Initial Population, Fitness Function, Selection, Reproduction Operators, Stopping Conditions, Evolutionary Computation versus Classical Optimization.

UNIT-V:

FUZZY Systems, Logic and Reasoning: Fuzzy Sets- Formal Definitions, Membership Functions, Fuzzy Operators, Fuzzy Set Characteristics, Fuzziness and Probability, Fuzzy Inferencing.

Philosophical foundations: Weak AI, Strong AI, Ethics of AI and Risks of AI.

CO4	3	3	3	2	3					2		2	2	2	2
CO5	3	3	3	2	3					2		2	2	2	2

UNIT-I

Introduction to Control Systems: Examples of control systems, Transfer function of spring-mass-damper system, Transfer function of simple RLC circuit. Block diagrams, Block diagram reduction.

UNIT-II

Steady-State and Transient Response: Transient Response of first order and second order system to step input. Concept of steady-

state error. Stability: Introduction to the concept of stability using Routh-Hurwicz criterion.

UNIT-III

State—space representation of linear control systems: Basic concepts. State—space representation of spring-mass-damper system, State—space representation of simple RLC circuit. Conversion of Transfer function into State Space, Conversion of State-Space in to Transfer Function.

UNIT-IV

Independent Joint Control: Transfer function of Armature Controlled DC Motor, Proportional (P) Control, Proportional-Integral (PI) Control, Proportional-Derivative (PD) Control, Proportional-Integral-Derivative (PID) Control.

UNIT-V

Computed Torque Feed-forward Control, Force Control: Compliance Control, Impedance Control, Hybrid Force/Motion Control.

UNIT-I ROBOT BASICS

Robot-Basic concepts, Definition, Need, Law, History, Anatomy, specifications.

Robot configurations-cartesian, cylindrical, polar ,articulated and SCARA, Robot wrist mechanism, Precision and accuracy of robot.

UNIT-II ROBOT ELEMENTS

End effectors-Classification, Robot drive system types: Electrical, pneumatic and hydraulic. Robot joints and links-Types, Robot

trajectories2D and 3D Transformation- Scaling, Rotation and Translation, Homogeneous transformation

UNIT-III ROBOT KINEMATICS AND CONTROL

Robot kinematics – Basics of direct and inverse kinematics. D-H matrix. Forward kinematics for a 2-link RR planar manipulator.

Control of robot manipulators – Point to point and Continuous Path Control. Robot programming methods.

UNIT-IV ROBOT SENSORS

Sensors in robots – Touch sensors-Tactile sensors – Proximity and range sensors. Force sensors, Light

Introduction to Machine Vision and Artificial Intelligence.

UNIT-V ROBOT APPLICATIONS

Applications of robots in Industries, Medical, Household, Entertainment, Space, Underwater, Defense, and Disaster management.

Applications of Micro and Nanorobots, Future Applications of robots.

Modelling and Simulation of Photovoltaic Systems

(Open Elective-III) SYLLABUS FOR B.E. V SEMESTER

L:T: P (Hrs/Week):3:0:0	SEE Marks: 60	Course Code: U230E510EE			
Credits:3	CIE Marks: 40	Duration of SEE: 3Hours			

COURSE OBJECTIVES The course will enable the students to:	COURSE OUTCOMES On completion of the course, students will be able to
Understand photovoltaic systems concepts, design criteria and conclusions, Verify model of photovoltaic systems using PSpice.	 Understand basics of solar radiation and PSpice software. Use a simplified analytical model of solar cell which can be implemented in PSpice. Examine basic equations of a solar cell and develop PSpice models Describe the association of solar cells to form PV arrays and PV modules. Interface PV systems to supply either DC or AC loads.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1				1					
CO2	3	2	1				1					
CO3	3	2	1				1					
CO4	3	2	1				1					
CO5	3	2	1				1					

Unit-1 Introduction to Photovoltaic Systems and PSpice

Photovoltaic system: Introduction, Important definitions: irradiance and solar radiation, Learning some of PSpice basics, Using PSpice subcircuits to simplify portability, PSpice piecewise linear (PWL) sources and controlled voltage sources, Energy input to the PV system: solar radiation availability, Problems

Unit-2 Spectral Response and Short-Circuit Current

Introduction: Absorption coefficient and Reflectance, Analytical solar cell model, PSpice model for the short-circuit spectral current density, Short-circuit current, Effects of solar cell material, DC sweep plots and I(V) solar cell characteristics, Ideal circuit model: series and shunt resistances and recombination terms, Problems

Unit-3 Electrical Characteristics of the Solar Cell

Ideal equivalent circuit, PSpice model of the ideal solar cell, Open circuit voltage, Maximum power point, Fill factor (FF) and power conversion efficiency, Generalized model of a solar cell, Effects of the series resistance on the short-circuit current and the open-circuit voltage, Effects of the shunt resistance, Effects of the recombination diode, Temperature effects, Problems

Unit-4 Solar Cell Arrays, PV Modules and PV Generators

Introduction, Series connection of solar cells, Identical solar cells in series, Bypass diode in series strings of solar cells, Shunt connection of solar cells, Shadow effects, The terrestrial PV module, Photovoltaic arrays, Photovoltaic generators and PV plants, Problems

Unit-5 Interfacing PV Modules to Loads and Battery Modelling

DC loads directly connected to PV modules, Photovoltaic pump systems, DC series motor PSpice circuit, Centrifugal pump PSpice model, PSpice simulation of a PV array-series DC motor-centrifugal pump system, PV modules connected to a battery and load, Lead–Acid battery PSpice model, PSpice model to commercial batteries, Simplified PSpice battery model, Problems

Learning Resources:

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Introduction to Biomedical Electronics

(Open Elective - III)

SYLLABUS FOR B.E. V – SEMESTER (Civil, CSE, CSE (AI&ML), EEE, IT & Mechanical)

L:T:P (Hrs./week): 3:0:0	SEE Marks: 60	Course Code: U230E510EC
Credits: 3	CIE Marks: 40	Duration of SEE: 3 Hours

COURSE OBJECTIVES

- To provide foundational knowledge of physiological systems and the origin of biomedical signals relevant to medical instrumentation.
- To introduce the basic components and performance requirements of medical instrumentation systems, including intelligent and noninvasive systems.
- To familiarize students with various electrodes and transducers used in biomedical applications, including their working principles and characteristics.
- 4. To develop understanding of therapeutic and prosthetic devices such as pacemakers, defibrillators, and ventilators, and their role in patient care.
- To explore modern medical imaging technologies such as Xray, CT, MRI, and thermography, and their applications in diagnostic medicine.

COURSE OUTCOMES

On completion of the course, students will be able to

- Recognize the fundamental need for biomedical signal acquisition and describe the structure and function of basic biomedical instrumentation systems.
- Explain the principles and applications of bioelectric signals, and evaluate the use of electrodes and transducers in biomedical measurements.
- Demonstrate the working principles and clinical relevance of therapeutic, prosthetic, and non-invasive biomedical instruments used in diagnosis and treatment.
- Apply mathematical, physical, and computational principles to interpret and analyze data from modern medical imaging systems such as Xray, CT, and MRI.
- Integrate knowledge of biomedical instrumentation systems to analyze constraints and design considerations for safe, reliable, and intelligent healthcare solutions.

CO3	2	1	3			2									2
CO4	3	2	2			2									3
CO5	2	2	2			2							1		2

UNIT-I:

Basics of Biomedical Electronics: Physiological systems of the body, sources of biomedical signals, basic medical instrumentation system, performance requirements of medical instrumentation systems, Intelligent medical instrumentation systems, General constraints in design of medical instrumentation systems.

UNIT - II:

Bioelectric Signals, Electrodes, Transducers: Origin of bioelectrical signals, recording electrodes, electrodes for ECG, EEG, EMG, microelectrodes. Transducer: Introduction, classification of transducers, performance characteristics of transducers, displacement position and motion transducers, pressure transducers, photoelectric transducer.

UNIT - III:

Therapeutic and Prosthetic Devices: Cardiac pacemaker, defibrillators, hemodynamic & haemodialysis, ventilators, infant incubators, surgical instruments, therapeutic applications of laser.

UNIT - IV:

Non-invasive Instrumentation: Temperature measurements, principles of ultrasonic measurements and its applications in medicine, medical thermography, physics of thermography infrared detectors and thermographic detectors.

UNIT - V:

Modern Medical Imaging System: Radiography: Production of X-rays, units of X-radiation, block diagram of X-ray machine, MRI, computed tomography: Block diagram and working.

Learning Resources:

- 1. L. Cromwell, Biomedical Instrumentation and Measurements, Prentice Hall.
- 2. Handbook of Biomedical Instrumentation by R.S. Khandpur.

UNIT – I: Introduction to General Signaling (8 Hours)

Opening of Railways: Duties of Commissioners, Sanction to Open Railway for Public Carriage of Passengers, Requirements & Recommendations for Signaling and Interlocking Installations, Catechism for Signaling and Interlocking Installations, for 25KV AC, Spl layouts: Isolation, Ruling gradients, Slip, Catch sidings

Schedule of Dimensions: General, Station Yards, Electric Traction 25KV AC 50 Cycles, Clearances required for 25KV single phase AC Electric Traction.

General Rules: Definitions, Type of Signals; Adequate Distance, System of Working, Absolute Block system, Automatic Block System, Block Working, Level Crossings, Station Working Rules.

UNIT – II: Railway Signaling (6 Hours)

Station Layouts: MACLS, Signal Aspects, Location of Signals; Station Layouts: Single Line, Double Line, 2-Road, 3-Road, 4-Road.

Signaling Elements: Track Circuits & Axle Counters, Block Instruments, point machines, Relays, Relay Interlocking and Electronic Interlocking, Requirement of Signaling in 25KV AC Electrified Area.

Signaling Interlocking Plan: Essentials of Interlocking, Train Detection, Point Switching, Signal, Block Control, Aspect Control Chart.

UNIT – III: Signaling Equipment – I (8 Hours)

Details of Relays, Signal Cables. Signals, Control Panel & Operation – Safety features, Working.

Details of Point Machines – Components, Working, Circuit Progression, Testing, Safety features,

Level Crossing Gates – Working, Circuit Progression, Safety features **Details of Track Circuits, Axle Counters** - Single section, Multisection, Subsystems; Working and Application.

UNIT – IV: Signaling Equipment – II (8 Hours)

Details about Block Instruments — Types, Working, Circuit Progression, safety features Data Acquisition System — Interfaces, Fault Logic.

Details of Integrated Power Supply, CLS Panel, Lightning and Surge Protection.

Practicals at IRISET Laboratory (12 Hours)

- 1. Relays, Signal Cables. Signals, Control Panel & Operation.
- 2. Point Machines Components, Working, Circuit Progression, Testing.
- 3. Level Crossing Gates Working, Circuit Progression.
- 4. Track Circuits, Axle Counters Single section, Multi-section, Subsystems; Working and Application.

For B.E., V - Semester - CBCS (Common to CSE, AIML & IT Branches)

L:T: P (Hrs/Week): 3:0:0	SEE Marks: 60	Course Code: U23OE510MA
Credits:3	CIE Marks: 40	Duration of SEE: 3Hours

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable the	At the end of the course students will be
students to:	able to:
1. Understand the Definition of	1. Evaluate Laplace transforms of
Laplace and its Properties.	functions.
2. Understand the Definition of	2. Evaluate Inverse Laplace transforms of
inverse Laplace Transforms-	functions.
Properties.	3. Apply Laplace transforms to evaluate
3. Understand the applications of	integrals and to solve ordinary
Laplace Transforms.	differential equations arising in
4. Study the Definition of Z-	engineering problems.
Transforms and its properties.	4. Evaluate Z- transforms of Sequences
5. Understand the applications of	5. Apply Z-transforms to solve ordinary
Z- Transforms	difference equations arising in
	engineering problems.

<u>UNIT – I: (8 Hours)</u> LAPLACE TRANSFORMS

Introduction to Laplace transforms - Existence of Laplace Transform - Properties of Laplace Transform-First shifting theorem - Second shifting theorem - Change of scale property - Differentiation of Laplace transform - Integration of Laplace Transform - Laplace Transform of Derivatives - Laplace Transform of Integrals

<u>UNIT – II: (8 Hours)</u>

INVERSE LAPLACE TRANSFORMS

Introduction to Inverse Laplace transforms -Properties of Inverse Laplace Transform-First shifting theorem - Second shifting theorem -Change of scale property- Multiplication with s - Division by s - Convolution Theorem (without proof).

<u>UNIT – III: (8 Hours)</u> APPLICATIONS OF LAPLACE TRANSFORMS

Applications of Laplace transforms to Initial and Boundary Value Problems upto second order —Laplace transform of periodic functions — Triangular wave — Square wave — Saw tooth wave.

<u>UNIT – IV: (8 Hours)</u> Z-TRANSFORMS

Introduction - Z-transforms of Standard sequences - Linearity Property - Scaling Property - Shifting Properties- Initial value theorem - Final value theorem - Differentiation of Z-transform.

<u>UNIT – V: (8 Hours)</u> INVERSE Z-TRANSFORMS

Introduction –Inverse Z-transforms of Standard functions - Convolution Theorem – Application of Z-Transforms to solve Difference Equations.

INTRODUCTION TO PHILOSOPHY

B.E-V SEMESTER GENERAL POOL-OE

Instruction: 3 Hrs/week	SEE Marks: 60	Course Code: U23OE330EH
Credits: 3	CIE Marks:40	SEE: 3 hrs.

Course Objectives	Course Outcomes
 What the course aims to achieve To introduce students to the major branches, questions, and methods of philosophy. To develop critical and logical thinking through philosophical analysis. To explore key philosophical texts and thinkers from various traditions. To encourage reflection on ethical, metaphysical, and epistemological issues. To cultivate the ability to construct and evaluate arguments. 	 What students should be able to demonstrate after completing the course 1. Define and explain foundational philosophical concepts and theories. 2. Analyze and critique philosophical arguments using logical reasoning. 3. Compare perspectives from different philosophical traditions and historical periods. 4. Apply philosophical thinking to contemporary ethical and social issues. 5. Formulate clear, coherent arguments in both oral and written form.

Unit 1: What Is Philosophy?

Definition and scope of philosophy

Branches of philosophy: metaphysics, epistemology, ethics, logic, aesthetics

Philosophical methods and the role of reasoning

Unit 2: Knowledge and Reality (Epistemology and Metaphysics)

What can we know? (Skepticism, rationalism, empiricism)

Appearance vs. reality

The mind-body problem

Unit 3: Ethics and Moral Philosophy

What is the good life?

Major ethical theories: utilitarianism, deontology, virtue ethics

Moral dilemmas and applied ethics

Unit 4: Political and Social Philosophy

The state and justice

Liberty, rights, and social contract theory Civil disobedience and authority

Unit 5: Logic and Critical Thinking

Arguments, premises, and conclusions Fallacies and sound reasoning Introduction to symbolic logic

Basics of Entrepreneurship

(Open Elective-III) SYLLABUS FOR B.E V Semester

L:T: P (Hrs./week):3: 0 :	SEE: 60	Course Code: U23OE540EH
Credits: 3	CIE: 40	Duration of SEE: 3 Hours

	Course objectives	C	Course Outcomes
The	e objectives of this course are		of the course the student will
to:		e able to:	
1.	Deeply understand and discover entrepreneurship	. Take-up choice	entrepreneurship as a career
2.	Build a strong foundation for the students to start, build, and grow a viable	Build a Mi . Identify v	nd Validate business models. nimum Viable Product (MVP). arious costs and revenue streams
3.	and sustainable venture Develop an entrepreneurial mind-set equipped with the	for a vent . Build succ skills.	ure. cessful teams and acquire sales
	critical skills and knowledge required		nd the business regulations and overnment schemes available.

UNIT-I

Introduction to Entrepreneurship: Definition of Entrepreneurship, Entrepreneurship as a career choice, Benefits and Myths of Entrepreneurship; Characteristics, Qualities and Skills of an Entrepreneur. Impact of entrepreneurship on the Economy and Society.

Opportunity and Customer Analysis: Identify your Entrepreneurial Style, Identify Business Opportunities, Methods of finding and understanding Customer Problems, Process of Design Thinking, Identify Potential Problems, Customer Segmentation and Targeting, Customer Adoption Process, Crafting your Value Proportions, Customer-Driven Innovation.

UNIT-II

Business Model and its Validation: Types of Business Models, Lean Approach, the Problem-Solution Test, Solution Interview Method, Difference between Start-up Venture and small Business, Industry Analysis, Identify Minimum Viable Product (MVP), Build-Measure-Lean Feedback Loop, Product-market fit test.

UNIT-III

Economics and Financial Analysis: Revenue streams and pricing, Income analysis and Cost Analysis-Product Cost and Operation Cost, Basics of Unit Costing, Profit Analysis, Customer Value Analysis, Different Pricing Strategies, Investors' Expectations, Pitching to Investors and Corporate.

UNIT-IV

Team Building and Project Management: Leadership Styles, Team Building in Venture, Role of good team in Venture, Roles and Respondents, Explore Collaboration Tools and Techniques-brainstorming, Mind Mapping. Importance of Project Management, Time Management, Work Flow, Network Analysis Techniques.

UNIT-V

Marketing & Business Regulations: Positioning, Positioning Strategies, Building Digital Presence and Leveraging

Social Media, Measuring effectiveness of Channels, Customer Decision-making Process, Sales plans and Targets, Unique Sales Proposition (USP), Follow-up and Close Sales. Business Regulations of starting and operating a Business, Start-up Ecosystem, Government schemes.

Introduction to Financial Analytics

(Stream based Open Elective)

Instruction: 3 Hrs/week	SEE Marks: 60	Course Code: U230E520EH
Credits: 3	CIE Marks:40	SEE: 3 hrs.

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable the learners to: 1. To gain knowledge of tools of financial analysis 2. To understand valuation methodologies of Financial Debt instruments 3. To understand corporate valuation methodologies	On completion of the course, students will be able to: 1. Differentiate effective rates of interest vs normal rates of interest. Understand time value of money 2. Analyse financial statements of a company. Understand efficient usage of capital. 3. To understand the impact of debt on the capital structure and valuations of a company. 4. Understand basis of financial projections, Valuation methods etc.

This course gives an overview of key inputs, covering time value of money, interest rates and others, required to take rational financial decisions. This course gives an insight of tools used to analyse and interpret financial statements of a company and thereby value a company's worth.

This is a theory cum numerical/case-study based paper. Provides exposure to students regarding Profit & Loss statement, Balance sheet & cash flow statement. Objectives of capital structure etc

Creates awareness about analysing a company from an investment perspective.

Unit 1 (5 hours)

introduction to Financial Management - Meaning - Financial Decisions-Interrelation between Financial decisions - Time Value of Money - concept of Present Value and Future value - Effective Vs Nominal rates of interest - Amortization (including simple numerical problems)

Unit 2 (10 hours)

Financial statement Analysis - Financial statements- components of financial statements- Profit and Loss - Balance sheet - cashflow statement- building blocks of financial statements- sensitivity of various components on the profitability - Inter and Intra Company comparision - Ratio Analysis, common Size statements.(Including numericals on Inter and Intra company comparison)

Unit 3 (8 hours)

Debt Securities - Types of Bonds - Bond Indenture -Valuation of Bonds - Bonds witirAnnual and Semi AnnualInterest payments - Current Yield-Yield to Maturity and Yield to Call - Bond Duration importance and Computation - Bond Portfolio management

Unit 4 (5 hours)

Capital Structure - Concept - Sources of Finance - Determinants of capital Structure - EBIr - EPS Analysis - Effect of Taxation - consideration of Management control.

Unit 5 (15 hours)

Business Valuation - concept -purpose and Hindrances -Projected Financials- Methods of Valuation Discounted Free cash Flow Method- Net Assets Based - comparable company- Market multiples Business Valuation in Mergers- Real life Examples

Text Books Units 1,2,3,4 -Financial Management by M Y Khan

Unit 5 * Institute of Company Secretaries Study book

Marketing Management For Engineers

(Stream based Elective)
SYLLABUS FOR B.E - V SEMESTER

Instruction: 2 Hours	SEE: 60	Course code: U230E510EH
Credits: 3	CIE: 40	Duration of SEE: 3 Hours

COURSE OBJECTIVES

The course will enable the learners to:

- To introduce fundamental concepts and principles of marketing relevant to engineering fields.
- To help students understand market needs and consumer behavior in technical markets.
- To develop skills in product development, pricing strategies, and promotion techniques for engineering solutions.
- 4. To explore the role of marketing in innovation, technology, and B2B (business-to-business) sectors.
- 5. To enable engineers to communicate the value of technical products to diverse stakeholders.

COURSE OUTCOMES

At the end of the course the learners will be able to: -

- 1. Define and explain core marketing concepts such as segmentation, targeting, and positioning.
- Analyze consumer and industrial buyer behavior using data and market research.
- Design basic marketing plans including product, price, place, and promotion strategies for technical products.
- Apply marketing principles to launch and promote innovations or engineering solutions.
- 5. Communicate complex technical features in a customer-centric, value-driven language..

UNIT-1: Introduction

Concept and importance of Marketing - Market Vs Marketing - Interface with Finance and Production - Marketing Mix - Marketing Environment - Internal and External

UNIT-2: Market Segmentation and Positioning

Concept - Levels and Bases for Segmentation - Segmenting Consumer Markets and Business Markets - Evaluation of Market Segments - Selecting Market Segments - Product Positioning, Positioning Strategies

UNIT-3: Buyer Behaviour

Introduction to buyer behaviour - Contemporary dimensions of buyer behaviour - Motivation and buyer behavior, Consumer decision making and buyer attitude: Information search, evaluation of alternatives. Steps between evaluation of alternatives and purchase decision, Post-purchase behaviour.

UNIT-4: Advertisement and Promotion

Promotion Decision - Promotion mix - Advertising Decision, Advertising objectives - Advertising and Sales Promotion — Developing Advertising Programme — Role of Media in Advertising - Advertisement effectiveness

UNIT-5: Digital Marketing

Importance of digital marketing - Difference between traditional marketing and digital marketing - Trends and scenario of the industry. Importance of Search Engine Optimization (SEO), Digital Campaign (creation, Site targeting, Keyword targeting, Demographic targeting/bidding) - Blogging, Social networking, Video creation & Sharing, Use of different social media platforms, Web analytics.

PROJECT MANAGEMENT

(OPEN ELECTIVE-IV) SYLLABUSFORB.E.VI-SEMESTER

L:T:P(Hrs/Week):3:0:0	SEE Marks:60	Course Code: U23OE610CE	
Credits: 3	CIEMarks:40	DurationofSEE:3Hours	

COURSE OBJECTIVES	COURSE OUTCOMES		
Objectives of this course are to:	Upon the completion of this course the students will be expected to:		
1. Learn the concept of project management along with function and objectives.	1. Understand the objectives, functions and principles of management in projects.		
 Understand various techniques used for project planning such as bar charts, CPM, PERT and crashing of networks. Acquire knowledge on various 	2. Practice the network techniques like CPM and PERT for better planning and scheduling of engineering works.		
types of contracts, tenders.	3. Analyse the importance of cost and time in network analysis and planning the work accordingly.		
	4. Knowledge on Contracts, Tenders, and Work orders related to the projects.		
	5. Interpret the concept of Linear Programming and solve problems by Graphical and Simplex methods.		

UNIT-I: Significance of Project Management: Importance of Project Management, Types of projects, Project Management Cycle, Objectives and functions of project management, management team, principles of organization and types of organization.

UNIT-II: Planning: Project Planning, bar charts, network techniques in project management – CPM Expected likely, pessimistic and optimistic time, normal distribution curve and network problems of PERT.

UNIT-III: Time Cost Analysis: Cost time analysis in network planning, updating

UNIT-IV: Contracts: Introduction, types of contracts and their advantages and disadvantages, conditions of contracts, Introduction to Indian contract act.

Tender: Tender form, Tender Documents, Tender Notice, Work Order

UNIT-V: Linear Programming and Optimization Techniques: Introduction to optimization-Linear programming, Importance of optimization, Simple problems on formulation of LP. Graphical method, Simplex method.

INDUSTRY 4.0

(Open Elective-IV) SYLLABUS FOR B.E VI Semester

L:T: P (Hrs./week):3: 0 : 0	SEE Marks:60	Course Code: U23OE610ME
Credits: 3	CIE Marks:40	Duration of SEE: 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
The objectives of the course is to	On completion of the course, students will be able to
provide an overview of Industry 4.O and its impact on modern manufacturing and develop skills for implementing industry 4.O technologies in production	 analyse the basic principles and technologies for smart factories and identify their applications in modern manufacturing. evaluate the concepts of Cyber-Physical Systems (CPS) and Cyber-
processes.	Physical Production Systems (CPPS) and their role in creating new business models. 3. apply the concepts of Digital Twins and Assistance Systems in production processes and their benefits. 4. develop strategies for ensuring
	safety and security in networked production environments and analyse the challenges and opportunities of Human-Robot Collaboration (HRC). 5. analyse the benefits and challenges of Cloud Manufacturing and the Connected Factory and develop strategies for implementing smart work pieces.

UNIT – I Introduction

Definition of Industry 4.0, Comparison of Industry 4.0 Factory and today's Factory, Difference between conventional automation and Industry 4.0.

Basic principles and technologies of a Smart Factory

Internet of Things (IoT) & Industrial Internet of Things (IIoT) & Internet of Services, Big Data, Cyber-Physical Systems, Value chains in manufacturing companies, Customization of products, Digital Twins, Cloud Computing / Cloud Manufacturing, Security issues within Industry 4.0 networks.

UNIT - II

Cyber-Physical Systems (CPS) and Cyber-Physical Production Systems (CPPS)

Definition of Cyber-Physical System, Core elements of Cyber-Physical Systems and Cyber-Physical Production Systems, Control theory and real-time requirements, Self-organization principles, Communication in cyber-physical systems, Design Methods for Cyber-physical Systems, Applications for cyber-physical systems.

Cyber-Physical Systems and new Business Models

How CPS can induce new Business Models, The Role of horizontal and vertical value streams, New Business Models for the Smart Factory, Characteristics of Business Models within the Smart Factory, Examples of new Business Models: Service provider, Data provider, Technology provider, Platform provider.

UNIT - III

Digital Twins in Production

Basic concepts of Digital Twins, Benefits, impact and challenges of Digital Twins, Features and Implementation of Digital Twins, Types of Digital Twins, Digital Twin use cases, Applications for digital twins in production.

Assistance systems for production

The connected worker within the Industry 4.0 scenario, Diversity-driven workplaces, Human-and task-centered assistance systems, Technical tools ("Ambient Assisted Working" (AAW)), Mobile information technologies, Shop floor information systems, Production line support systems, Manipulator systems and intelligent chairs, Human work support by using exoskeletons, Applications of assistance systems in production.

UNIT-IV

Human-Robot Collaboration

Human-Robot Collaboration in Industry, Collaborative Robots: tasks, examples, Types of Human-Robot Collaboration, Safety of Human-Robot Collaboration, Applications with Collaborative Robots.

Safety and Security in networked Production Environments

Definition of Safety with Industry 4.0, Safety for connected Machines and Systems, Safety in Human Robot cooperation, Optimizing Safety with Industry 4.0, Security & Security Risks with Industry 4.0.

UNIT - V

Cloud Manufacturing and the connected factory

Virtualization, Cloud Platforms, Big data in production, Cloud-based ERP and MES solutions, Connected factory applications, IT security for cloud applications.

The smart work piece

Intelligent work piece, Work piece tagging, QR codes and RFID, Communication between work piece and environment, Multi-agent systems in production, Applications for smart work pieces.

Learning Resources:

Security concepts	5. Analyze and evaluate web security attacks.			

UNIT-I: Introduction

Introduction: World Wide Web, Web Browsers, Web Servers, URL, HTTP, TCP Port. HTML: Standard HTML document structure, Basic Tags, Images, Hypertext Links, Lists, Tables, Frames. CSS: In-line style sheets, Internal Style sheets and External Style sheets.

UNIT-II: Basics of JavaScript

JavaScript: Introduction, Basics of JavaScript-variables, data types and operators, Control Structures, Arrays, Functions, HTML Forms, Events and event handling.

UNIT-III: Bootstrap

Bootstrap: The Grid system, Layout components: Tables, Images, alerts, buttons, badges, progress bars, cards, drop downs, pagination, Collapse, Navbar, Carousel.

UNIT-IV: XML

XML- The Syntax of XML, XML Document Structure, Document Type Definitions.

Introduction to MVC - Introduction to Model View Controller Architecture

UNIT-V: Web Security Fundamentals

Web Hacking Basics, HTTP & HTTPS URL, Evolution of Web Applications - Web Application Security - Core Defence Mechanisms - Handling User Access - Handling User Input- Handling Attackers - Managing the Application, Introduction to Web 2.0

Learning Resources:

(AI&ML TRACK : OPEN ELECTIVE-IV)

(Common for ECE, EEE, MECH & CIVIL) SYLLABUS FOR B.E VI- SEMESTER

L:T:P (Hrs./week): 3:0:0	SEE Marks :60	Course Code: U230E620IT
Credits: 3	CIE Marks: 40	Duration of SEE :3Hrs

	COURSE OUTCOMES
COURSE OBJECTIVES	On completion of the course, students will be able
	to
Introduce the fundamental concepts, techniques and	Demonstrate knowledge of the Artificial intelligence and machine learning literature.
modern tools in Artificial intelligence and Machine	Understand and apply latest Python libraries for Machine learning models.
Learning field to effectively apply it to the real-world	3. Apply an appropriate algorithm for a given problem.
problems.	4. Apply machine learning techniques in the design of computer systems.
	 Explain the relative strengths and weaknesses of different machine learning methods and approaches.

UNIT-I:

Introduction to AIML: Foundations of AI, Sub areas of AI, Applications. Introduction to learning, Types of Learning: Supervised Learning, Unsupervised Learning, Reinforcement Learning.

Introduction to Python and ML libraries: intro to python data types, control flow, loops, functions, modules & packages. Intro to NumPy & Scikit-learn.

UNIT-II:

Supervised learning: ML Task, ML Experience or Data, ML Performance metric, Linear Regression, Linear regression Simulator, Logistic Regression.

Supervised Non-parametric learning: Introduction to Decision Trees, K-Nearest Neighbor, Feature Selection.

UNIT-III:

Supervised Parametric learning (Neural networks): Perceptron, Multilayer Neural Network, Playground Simulator, Backpropagation.

UNIT-IV:

Supervised Parametric learning: Support Vector Machine, Kernel function and Kernel SVM.

Supervised Parametric Bayesian learning: Introduction, Naive Bayes Classification, Bayesian Network.

UNIT-V:

Unsupervised leaning: Clustering, K-means Clustering, DBSCAN

CO2	2	1	1				1					1
CO3	2	1	1				1					1
CO4	2	1	1				1					1
CO5	2	1	1				1					1

UNIT -I: Introduction to Battery Management System:

Cells & Batteries, Nominal voltageand capacity, C rate, Energy and power, Cells connected in series, Cells connected in parallel, Electrochemical and lithium-ion cells, Rechargeable cell, Charging and Discharging Process, Overcharge and Undercharge, Modes of Charging.

UNIT -II: Battery Management System Requirement:

Introduction and BMS functionality, Battery pack topology, BMS Functionality, Voltage Sensing, Temperature Sensing, Current Sensing, High-voltage contactor control, Isolation sensing, Thermal control, Protection, Communication Interface, Range estimation, State-of-charge estimation, Cell total energy and cell total power.

UNIT —III: Battery State of Charge and State of Health Estimation, Cell Balancing:

Battery state of charge estimation (SOC), voltage-based methods to estimate SOC, Model-based state estimation, Battery Health Estimation, Lithium-ion aging: Negative electrode, Lithium-ion aging: Positive electrode, Cell Balancing, Causes of imbalance, Circuits for balancing.

UNIT -IV: Modelling and Simulation:

Equivalent-circuit models (ECMs), Physics-based models (PBMs), Empirical modelling approach, Physics-based modelling approach, simulating an electric vehicle, Vehicle range calculations, simulating constant power and voltage, Simulating battery packs.

UNIT -V: Design of battery BMS:

Design principles of battery BMS, Effect of distance, load, and force on batterylife and BMS, energy balancing with multi-battery system.

Learning Resources:

UNIT - I : OVERVIEW

Introduction to IoT – Improving Quality of life.

IoT-An Architectural Overview, M2M and IoT Technology Fundamentals-Devices and gateways, Data management, Introduction to cloud IOT platforms like MS Azure, AWS IOT, Google Cloud IOT, Thingworx, Business processes in IoT, IoT Enabling Technologies, IoT Levels & Deployment.

UNIT - II : Real-World Design Constraints

Real-World Design Constraints- Introduction, Technical Design constraints-hardware is popular again, Data representation and visualization, Interaction and remote control. Power Management in IoT device, Power conditioning using energy harvesting.

UNIT - III: IOT PROTOCOLS

Introduction to MQTT, Quality of services in MQTT, standards and security in MOTT.

Introduction and implementation of AMQP, Implementation of CoAP and MDNS.

UNIT - IV: Device for IoT

Choice of Microcontroller, Introduction to Raspberry Pi, Features of Pi, Programming platform, Phython programming for Pi. Building basic IoT Applications using Raspberry Pi.

UNIT - V : IoT case studies

Smart Cities and Smart Homes, Connected Vehicles, Agriculture, Healthcare, Activity Monitoring.

Automatic Train Protection System - Kavach

SYLLABUS FOR B.E. VI - SEMESTER

(CSE, CSE(AI&ML), ECE, EEE, IT & Mechanical)

L:T:P (Hrs./week): 2:0:1	SEE Marks: 60	Course Code:U23OE630PH	
Credits: 3	CIE Marks: 40	Duration of SEE: 3 Hours	

	COURS	SE OBJECTI	VES					
1.	To provide	students	with	а				
	comprehensiv	e understa	understanding of					
	automatic	train	protec	ction				
	technologies,	focusing	on	the				
	architecture Kavach systen		g of	the				

- To impart knowledge about the components and subsystems of Kavach, including both onboard and wayside equipment, communication protocols, and signaling interfaces.
- 3. To equip students with the skills required to explain layout-specific plans, diagrams, and implementation strategies for deploying Kavach systems in railway networks.
- 4. To enable students to simulate, test, and validate Kavach configurations using testbench environments to ensure functionality, reliability, and safety compliance.

COURSE OUTCOMES

On completion of the course, students will be able to

- Acquire knowledge about the Train Protection Systems in general and Kavach - Indian Railways Automatic Train Protection System in detail.
- Acquire knowledge about various elements, subsystems associated with Kavach, those on the ground wayside, those on the train - onboard and related concepts.
- Illustarte various plans & diagrams required for implementation of Kavach for typical station layout.
- Simulate, test, and evaluate the performance of the Kavach system using testbench environments, ensuring correctness of configuration, data validation, and compliance with safety standards.

UNIT – I: Introduction to Train Protection Systems (8 Hours)

Train Protection Systems: Auxiliary Warning Systems, European Train Control Systems Communication Based Interlocking System, Spot and Continuous Relay of Information

Working of Train Protection System – Kavach: Overview of Kavach and its Working, Features, Subsystems, Communication Interfaces, Signalling Interfaces

Subsystem: Onboard Kavach: Driver Machine Interlocking, Braking Interface, Radio Equipment, Onboard Computer, Transponder Receiver, Odometry, GNSS, GPRS, GSM

Subsystem: Stationary Kavach Station Kavach, Track Side Equipment, Signalling Interface, Radio & Tower, GNSS, Transponders, Network Monitoring System

UNIT – II: (6 Hours)

Concepts: Location Referencing - Train position, Modes of Onboard subsystem, Train Characteristics, Mode Transitions, Braking Curves, Speed Profiles, Speed Limits, Speed Monitoring, Target Speed, Target Distance, Movement Authority, Communication Protocols, Key Management System (KMS), Messages & Language

UNIT - III: Design -Kavach: (8 Hours)

Survey, Assessment & Estimation: Station Layout, Radio Signal Strength, Tower Location, Power Requirement, Cable Survey, Loco Fitment Survey

Station Design: Kavach Scheme Plan, Kavach Control Table, Signalling Interface Diagram, Connectivity Plans for Remote Interface Units (RIUs), Power Supply Plan

Tower Design: Soil Testing, Foundation design, Super Structure Design

UNIT – IV: Installation, Deployment & Testing (8 Hours)

Stationary Kavach: Interlocking Interface, RFID Tags, Station Master Operation Console Indication Panel (SM_OCIP), GPS/GSM Antennas, Precommissioning Checklist, Testing

Onboard Kavach: DMI, Speed Sensors, RFID Reader, Onboard Computer, Brake Interface Unit, Pre-commissioning Checklist, Testing

Practicals at IRISET Laboratory (12 Hours)

- Testbench, Preparation and deployment of Stationary Kavach Data: Configuration involving Topographical Information - Arrangement of Signals/Markers, Transponders, Inter signal Distances, Signal Routes, Gradients, Speed Restrictions
- 2. Verification and Validation of Onboard Data Ceiling

INTRODUCTION TO PSYCHOLOGY

SYLLABUS FOR B.E-VI SEMESTER: GENERAL POOL - OE

Instruction: 3 Hrs/week	SEE Marks: 60	Course U23OE630EH	Code:
Credits: 3	CIE Marks:40	SEE: 3 hrs.	

Course Objectives:	Course Outcomes:
The course aims to:	By the end of the course, students will be able to:
1. Introduce students to the foundational concepts, theories, and branches of psychology.	1. Explain core psychological theories and their relevance to everyday life.
2. Develop an understanding of human behaviour and mental processes through scientific approaches.	2. Analyze behaviour using major psychological perspectives (e.g., behavioural, cognitive, humanistic, etc.).
3. Encourage critical thinking and analytical reasoning in the study of psychological phenomena.	3. Apply psychological principles to real- world situations such as learning, motivation, and social interaction.
4. Foster awareness of the biological, cognitive, and socio-cultural influences on behaviour.	4. Demonstrate basic skills in psychological research, including hypothesis formulation, data collection, and analysis.
5. Equip students with basic research skills and ethical considerations in psychological practice.	5. Evaluate ethical issues and cultural factors that influence psychological practice and research.

Course Description:

This course provides an overview of psychology as a scientific discipline. Students will explore the biological, cognitive, social, and developmental foundations of human behaviour. No prior knowledge is required.

Unit 1: Foundations of Psychology

- 1. History of psychology (structuralism, functionalism, behaviourism, etc.)
- 2. Major perspectives (biological, cognitive, behavioural, humanistic, psychodynamic)
- 3. Research methods in psychology

Unit 2: Biological Bases of Behaviour

- 1. The nervous system and the brain
- 2. Neurotransmitters and hormones
- 3. Sleep and consciousness

Unit 3: Development across the Lifespan

- 1. Cognitive and emotional development (Piaget, Erikson)
- 2. Social development
- 3. Nature vs. nurture debate

Unit 4: Learning and Memory

- 1. Classical and operant conditioning
- 2. Observational learning
- 3. Memory processes and types

Unit 5: Social and Abnormal Psychology

- 1. Attitudes, conformity, and group behaviour
- 2. Psychological disorders and diagnosis (DSM overview)
- 3. Basic treatment approaches (CBT, psychotherapy)

Unit I: Pivoting and New Business Model

Introduction to Advanced Course and Recapping the key concepts; Revisit of idea/ solution, business model and team members, Need for a mentor; Pivoting and its need; Types of Business models; Refining business model; Analyzing the Business Model of Competitors; Adding new customer segments to existing business model.

Unit II: Business Planning

Product Management: Need for a product management with examples; Making a sales plan; Building sales organization: Entrepreneur interview, Hiring sales team; Making a people plan for the venture; Introduction and understanding financial planning and forecasting template; Discussing financial planning and revisiting business model; Creating a procurement plan; Negotiation.

Unit III: Customer Life cycle and Building the A-team

Customer life cycle; identifying secondary revenue streams; Funding Landscape: Funding options for an entrepreneur; Investor hunt: Creating funding plan and designing the pitch deck; Attracting right talent — I: Intro to building the A-team; Examples; Setting the team for success.

Unit IV: Branding and Channel Strategy, Leveraging TechnologiesCreating brand Strategy: Drawing venture's golden circle; Defining the positioning statement: values; Creating a Public Image and Presence of the Venture; Identifying the right channel; Platforms for Marketing and Promotion; Platforms for Communication and Collaboration; Making the Tech Plan.

Unit V: Measuring Progress, Legal Matters and Role of Mentors & Advisors

Metrics for Customer Acquisition and Retention; Financial Metrics: Finding new revenue streams based on key financial metrics; Re-forecasting financial plan to increase margin; Professional Help and Legal & Compliance Requirements; Selecting IP for organization; Identifying mentors and advisors; Scouting board of directors; Capstone Project.

BUSINESS INTELLIGENCE

(Common to all branches) SYLLABUS FOR B.E. VI Semester Stream- Based – Open Elective

Instruction: 3 Hours	SEE:	60	Course code: U23OE620EH
Credits: 3	CIE:	40	Duration of SEE: 3 Hours

COURSE OBJECTIVES	COURSE OUTCOMES
The course will enable he	By the end of this course, students will
leaners to	be able to : -
1. To introduce the concepts	1. Define the architecture, evolution,
and architecture of	and benefits of Business Intelligence.
Business Intelligence (BI)	2. Explain data warehousing and mining
systems.	techniques, and apply them in real-
2. To familiarize students	time data environments.
with data warehousing,	3. Use Business Performance
data mining, and analytics	Measurement (BPM) tools and
tools.	performance dashboards for
3. To provide insights into	managerial decision-making.
BI implementation and its	4. Employ Business Analytics and data
role in decision-making.	visualization techniques in business
	contexts.
	5. Discuss the challenges in BI
	implementation and emerging trends
	such as social BI and reality mining.

Unit-I: Introduction to Business Intelligence (BI)

Definition, History and Evolution, Styles of Business Intelligence, Benefits of Business Intelligence, Real-time Business Intelligence, Business Intelligence Value chain, Architecture of Business Intelligence.

Unit- II: Data ware housing and Data mining

Date Warehousing (DWH): Definition, Characteristics, types,-Date warehousing frame world, Data Warehousing architecture, Alternative architectures, Data ware housing integration, Data ware housing-Development approaches, Real time data warehousing.

Data Mining: Definition, Characteristics, Benefits, Data mining functions, Data mining applications, Data mining techniques and tools. Text mining, Web mining.

Unit -III: Business Performance Measurement (BPM)

Definition, BPM v/s BI, Summary of BPM Process, Performance measurement, BPM methodologies, BPM architecture and applications, Performance dash boards.

Unit-IV: Business Analytics and Data Visualization

Business Analytics-Definitions, Tools and techniques of BA, Advanced business analytics Business Analytics and Web usage, Benefits and success factors of Business Analytics.

DataVisualization: Definition, New direction in Data Visualization, GIS, GIS v/s GPS

Unit-V: Business Intelligence implementation and emerging trends

Implementing Business Intelligence-Implementation Factors, Critical success factors of Business implementation, Managerial issues related to BI implementation, Business Intelligence and integration -Types, Need, and Levels of Business Intelligence integration.

Emerging trends in Business Intelligence implementation, Social networks and Business Intelligence, Collaborative decision making, Reality mining.
