VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS) Ibrahimbagh, Hyderabad-31

Approved by A.I.C.T.E., New Delhi and Affiliated to Osmania University, Hyderabad-07

Sponsored by VASAVI ACADEMY OF EDUCATION Hyderabad

SYLLABI UNDER CBCS FOR B.E VII & VIII SEMESTERS OF MECHANICAL ENGINEERING (R-19) WITH EFFECT FROM 2022-23

(For the students admitted in 2019-20)

DEPARTMENT OF MECHANICAL ENGINEERING

+91-40-23146060, 23146061 Fax: +91-40-23146090 Website: www.vce.ac.in

VISION OF THE INSTITUTE

Striving for a symbiosis of technological excellence and human values.

MISSION OF THE INSTITUTE

To arm young brains with competitive technology and nurture holistic development of the individuals for a better tomorrow.

VISION OF THE DEPARTMENT

To establish global leadership in the field of mechanical engineering and develop competent human resources with values and ethics

MISSION OF THE DEPARTMENT

To nurture an environment of research, innovation and knowledge through the latest teaching-learning practices in mechanical engineering

PRC	OGRAM OUTCOMES (POs)
1	Graduates demonstrate knowledge of basic sciences and mechanical engineering.
2	Graduates demonstrate an ability to identify, formulate and solve engineering problems
3	Graduates demonstrate an ability to design and conduct experiments, analyze and interpret data.
4	Graduates demonstrate an ability to design a system, component or process as per needs and specifications
5	Graduates demonstrate skills to use modern engineering tools, software and equipment to analyze for problem solving.
6	Graduates demonstrate an ability to visualize and work on laboratory and multi disciplinary tasks.
7	Graduate shows the understanding of impact of environment and society of engineering solutions and aim to provide sustainable solutions.
8	Graduates demonstrate knowledge of professional and ethical responsibilities.
9	Graduates shall be able to work independently and also in multi disciplinary teams
10	Graduates are able to communicate effectively in both verbal and written form.
11	Graduates will demonstrate the ability to handle the projects through appropriate project management techniques.
12	Graduates develop confidence for self education and ability for lifelong learning

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The mechanical engineering graduates will

PEO1	possess the required foundation and knowledge in the
	field of mechanical engineering.

PEO2	advance professionally as a result of their ability to solve
	technical problems and work in multidisciplinary teams
	leading to significant contribution to the industry

PEO3	acquire life long learning through training programs and higher qualifications.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1	Apply principles of basic sciences and engineering to
	mechanical systems

- **PSO2** Model, analyze, design, and realize mechanical components and processes
- **PSO3** Be prepared to work professionally and ethically in thermal, design and manufacturing areas of mechanical engineering

IBRAHIMBAGH, HYDERABAD - 500 031

Department of Mechanical Engineering THERMAL TURBO MACHINES

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:1:0	SEE Marks:60	Course Code: U19PC710ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
understand compressible flows and their application to normal shocks; study basic principles, governing equations and analysis of flow through turbo machines, jet propulsion and rocket propulsion systems.	 evaluate the basic properties of compressible flow. analyze the performance of centrifugal and axial flow compressors. explain the working principle of steam turbines and analyze their performance. estimate the performance of various gas turbine cycles. illustrate the working of jet and rocket propulsion systems.

UNIT-I: COMPRESSIBLE FLOWS

Speed of pressure waves, Mach number, acoustic velocity, Mach cone and Mach angle; pressure field due to a moving source of disturbance; static and stagnation properties; Introduction to shock waves — normal shock waves, governing equations, Prandtl—Meyer equation, Rankine—Hugoniot equation, stagnation pressure ratio.

UNIT-II: ROTO DYNAMIC COMPRESSORS

Classification, Comparison of reciprocating and rotary compressors; Centrifugal compressors: principle of operation, Euler Equation, velocity triangles, prewhirl, slip factor and its effect, work done. Performance characteristics; Axial flow compressors: construction, working principle, velocity triangles, Work done factor, stage efficiency, degree of reaction, performance characteristics, chocking, surging and stalling;

UNIT-III: STEAM TURBINES

Classification; Impulse turbine - nozzle efficiency, blade efficiency, gross and stage efficiencies; velocity triangles, optimum blade speed ratio, maximum work done and blade efficiency; Compounding of steam turbines.

Reaction turbine - velocity triangles, degree of reaction, blade efficiency, maximum work done; balancing of end thrust.

UNIT-IV: GAS TURBINES

Classification and applications; constant pressure and constant volume gas turbines, Joule cycle-configuration diagram and T-s diagram, thermal efficiency, maximum pressure ratio, optimum pressure ratio for maximum work done, inter-cooling, reheating and regeneration.

UNIT-V: JET PROPULSION

Introduction, jet engine types and applications, air craft propulsion theory, thrust, thrust power and propulsive efficiency; Turbo jet, Turbo prop, Turbo fan engines, Ramjet engines, pulse jet engines, thrust augmentation;

Rocket Propulsion: types of propellants and Rocket engines, Rocket propulsion theory and applications.

Learning Resources:

FINITE ELEMENT ANALYSIS

SYLLABUS FOR B.E. VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks: 60	Course Code : U19PC720ME
Credits : 3	CIE Marks: 40	Duration of SEE: 3 Hours

The objectives of this course are to: understand the concept of FEA and apply it to 1-dimensional and 2-dimensional problems of structural analysis and 1-dimensional problems of thermal analysis.

At the end of the course, students shall be able to:

- 1. understand the shape functions and formulate the finite element equations for 1-D elements.
- 2. evaluate the deflections, stresses and strains for trusses and beams.
- 3. analyze two dimensional problems for their deflections, stresses and strains.
- 4. understand the principles used in FE software tools and analyse one dimensional steady state heat transfer problems.
- 5. formulate the eigen value problem of dynamic systems and obtain the eigen values and eigen vectors for a stepped bar and a beam.

UNIT-I

Introduction to Finite Element Method, stress and Equilibrium, Strain, displacement, stress–strain relations.

One dimensional problems:

Finite element modelling coordinates and shape functions, Potential Energy approach, assembly of Global stiffness matrix and load vector, Finite element equations for one dimensional linear bar element, Penalty approach, introduction to quadratic shape functions.

UNIT – II :Analysis of trusses and beams:

Element stiffness matrix for a plane truss member. Analysis of plane trusses, element stiffness matrix for a 2D-beam member (one rotation and one translation at each node), analysis of 2D beams.

UNIT – III: Two dimensional problems:

Element stiffness matrix for constant strain triangle element (CST), two dimensional stress analysis using CST elements and treatment of boundary conditions, introduction to Finite element modelling of axi—symmetric solids, two dimensional four noded iso—parametric elements.

UNIT - IV

Introduction of Finite Element analysis software: Pre-processing, solution, post processing.

mesh requirements, type of elements and their degrees of freedom, convergence requirements.

Numerical integration using Gaussian Quadrature with two and three point formulae.

Steady state one dimensional heat transfer analysis of composite wall and a fin.

UNIT - V

Dynamic Analysis: Formulation of finite element model, properties of eigen vectors, lumped and consistent mass matrices, evaluation of Eigen values and Eigen vectors for a stepped bar and a beam.

Learning Resources:

ROBOTICS (PE-II)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P (Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE710ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COLLEGE OR LECTIVE	COLIDCE OUTCOMES		
COURSE OBJECTIVE	COURSE OUTCOMES		
The objective of the	On completion of the course, students will be able to		
course is to			
study robot anatomy, configuration, sensors, drives and applications of robots; forward & inverse kinematics, dynamics and control.	 explain basic terminology of robotics and summarize various industrial applications and specifications of robots. apply direct and inverse kinematics to different robot manipulators using principles of D-H transformation. utilize Jacobian matrix for velocity relationship of joints and end effector and plan trajectory of robots using different techniques. estimate robot dynamics using Lagrange and Newton-Euler methods and develop control laws. outline different types of end effectors, sensors and drives that are needed for effective working of robots. 		

UNIT-I

Laws of robotics, Basic terminology, Basic configurations, Degrees of freedom, work envelope, motion control methods. Applications in industry – material handling, loading & unloading, processing, welding & painting applications, assembly and inspection, Robot specification requirements.

UNIT-II

Rotation matrix. Euler angles. RPY representation, Homogeneous transformation matrix. Denavit – Hartenberg convention. Direct and inverse kinematics for industrial robots for position and orientation.

UNIT-III

Manipulator Jacobian. Joint–End effector velocity, Direct and inverse velocity analysis, Trajectory planning, interpolation, cubic polynomial, linear segments with parabolic blending, Static force and moment transformation, Singularities, Redundancy.

UNIT-IV

Robot dynamics: Lagrangian and Newton–Euler formulation for RR & RP manipulators.

Control: individual joint, computed torque.

UNIT-V

End effectors: classification and working principle.

Sensors: Position, velocity, vision, proximity and range, tactile and force. Drives for robots: Electrical, hydraulic and pneumatic.

COMPUTER INTEGRATED MANUFACTURING (PE-II)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE720ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
understand the various islands of automation in an industry and also calculate the relevant parameters of	understand the effect of manufacturing automation strategies and derive production metrics. analyze automated flow lines and assembly
automation	 analyze automated flow lines and assembly systems, and balance the line. understand assembly systems with its quantitative analysis.
	4 expertise in understanding automated material handling and storage systems for a typical production system.
	5 understand the various inspection systems used in automation industry.

UNIT-I: MANUFACTURING AUTOMATION

Automated Manufacturing Systems, Computerized Manufacturing Support Systems, Reasons for Automation, Automation Strategies-The USA Principle, Ten Strategies for Automation and Process Improvement, Automation Migration Strategy.

UNIT-II

Automated Flow lines: System Configurations, Workpart Transfer Mechanisms, Storage Buffers, Control of Production Line, Analysis of Transfer Lines-Transfer Lines with No Internal Parts Storage, Transfer Lines with Internal Storage Buffers.

Manual Assembly Lines: Assembly Workstations, Work Transport Systems, Line Pacing, Coping With Product Variety, Analysis of Single Model Assembly Lines-Repositioning Losses, The Line Balancing Problem, Line Balancing Algorithms-Largest Candiate Rule, Kilbridge and Wester Method, Ranked Positional Weights Method.

UNIT-III: AUTOMATED ASSEMBLY SYSTEMS

System Configurations, Parts Delivery at Workstations, Applications, Quantitative Analysis of Assembly Systems- Parts Delivery System at Workstations, Multi-station Assembly machines, Single Station Assembly Machines, Partial Automation.

UNIT-IV: AUTOMATIC MATERIAL HANDLING AND STORAGE SYSTEMS

Design Considerations in Material Handling, Material Transport Equipment-Industrial Trucks, Automated Guided Vehicles, Monorails and Other Rail-Guided Vehicles, Conveyors, Cranes and Hoists, Analysis of Vehicle Based Systems, Conveyor Analysis. Automated Storage/Retrieval Systems, Carousel Storage Systems, Engineering Analysis of AS/RS and Carousel Systems.

UNIT-V: AUTOMATED INSPECTION SYSTEMS

Overview of Automated Identification Methods, Bar Code Technology, Radio Frequency Identification, Other AIDC Technologies-Mangnetic Stripes, Optical Character Recognition, and Machine Vision.

Learning Resources:

- 1. Mikell P Groover, "Automation, production Systems and Computer Integrated Manufacturing",3rd Edition, Prentice Hall Inc., New Delhi, 2007.

REFRIGERATION AND AIR CONDITIONING (PE-II)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE730ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
discuss basics of refrigeration and describe the working of different types of refrigeration systems; explain the principles of psychrometry, list different equipment used in air conditioning plant.	 classify the refrigerants and analyze the performance of air refrigeration. solve problems in vapour compression refrigeration systems and evaluate their performance. compare VAR and VCR systems and explain working principles of various refrigeration systems. define different properties of psychrometry. compute cooling loads of an air conditioning building and explain working of different Air conditioning systems.

UNIT-I

Introduction to Refrigeration: Definition of Refrigeration and Airconditioning –Necessity of Refrigeration and its applications – Methods of Refrigeration, unit of Refrigeration and COP. Reversed Carnot cycle – limitations, effect of operating temperatures.

Refrigerants: Classification, Nomenclature and Desirable properties. Alternative Refrigerants to HCFC refrigerants and Future refrigerants.

Air refrigeration System: Analysis of Bell Coleman cycle/reversed Brayton cycle, open and dense air system; Boot-strap air cycle refrigeration.

UNIT-II: Vapour Compression Refrigeration System

Working principle and essential components of a simple vapour compression refrigerator cycle. Analysis of the cycle, COP, Representation of the cycle on T-s, P-h planes. Dry and wet compression, effect of operating conditions like evaporating pressure, condenser pressure, liquid sub cooling and vapour super heating on performance of the system.

Applications of VCR system: Domestic Refrigerator and water cooler.

UNIT-III

Vapour absorption Refrigeration system: Simple absorption system, COP, practical Ammonia refrigeration absorption system, Lithium Bromide absorption system, Electrolux Refrigerator, common refrigerant and absorbents properties. Comparison with vapour compression refrigeration system.

Working principle, advantages and applications of Steam Jet Refrigeration System.

UNIT-IV

Psychrometry: Definition, properties, Psychrometric chart, Psychrometric processes – heating & cooling with humidification and dehumidification and adiabatic dehumidification, adiabatic chemical dehumidification and mixing processes; Types and working of psychrometers.

Introduction to Air conditioning: Requirement of comfort air conditioning, Thermodynamics of human body.

UNIT-V

Cooling load calculations for building air conditioning:

Different sources of heat: Heat flow due to conduction, sun load due to direct solar radiation, load from occupants, equipment load, infiltration air load and miscellaneous heat sources, fresh air load, Energy conservation for building air conditioning.

Design of Air conditioning system: All fresh air load, Re-circulated air, Recirculated air with Reheat coil. Concept of by-pass factor, sensible heat factor, Apparatus Dew Point, Room Sensible Heat Factor (RSHF), Gross Sensible Heat Factor (GSHF).

Air conditioning systems: Working of Window/Split air conditioner, packaged air conditioner and central air conditioning system.

Note: Use of R&AC tables and charts are permitted in the examination hall.

Learning Resources:

- 1. Stocker W.S., "Refrigeration & Air Conditioning", 2nd Edition, Tata McGraw-Hill, New Delhi, 1985.

SUPPLY CHAIN MANAGEMENT (PE-II)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE740ME	
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours	

COURSE OBJECTIVE	COURSE OUTCOMES	
The objective of the course is to	On completion of the course, students will be able to	
know the significance of supply chain management	1 Discern what supply chain management concepts are used in engineering applications.	
in engineering, maintain inventory and pricing.	2 Understand why planning an effective transportation and warehouse management systems is essential.	
	3 Know how to Design effective supply chain networks.	
	4 Tell how to Integrate and optimize demand and supply gaps.	
	5 Design pricing and revenue management systems	

UNIT-I: INTRODUCTION-SUPPLY CHAIN MANAGEMENT (SCM)

What is supply chain?, types of supply chains, major drivers of supply chain; objectives and importance of SCM, structure of a supply chain, drivers of supply chain performance, roles of facilities, inventory, transportation, information, and pricing in SCM. Examples of supply chains. Case study: Seven-Eleven Japan Co.

UNIT-II: DESIGNING SUPPLY CHAIN NETWORK

Design options for distribution network, online sales and the distribution network, Indian commodities distribution channels, role of network design in the supply chain, factors influencing network design decisions, impact of globalization on supply chain networks. Case Study: Blue Nile and Diamond Retailing.

UNIT-III: PLANNING DEMAND AND SUPPLY IN A SUPPLY CHAIN

Demand forecasting in a supply chain, role of forecasting, time-series forecasting methods, measures of forecast error, aggregate planning, and aggregate planning strategies, Supply chain planning, demand planning and forecasting operational practices in supply chain, Just-in-time, Kanban, Vendor-managed inventory, managing supply & demand, supply chain security management.

UNIT-IV: PLANNING AND MANAGING INVENTORIES IN A SUPPLY CHAIN

Classification of inventory, role of cycle inventory in supply chain, control of inventories in retail and services, economies of scale to exploit fixed costs and quantity discounts, short-term discounting: Trade promotions, managing uncertainty: safety inventory and optimal level of product availability.

UNIT-V: DESIGNING AND PLANNING TRANSPORTATION NETWORKS: Role of transportation in supply chain, modes of transportation and their performance characteristics, design options for a transportation network, Mumbai Dabbawalla's: A highly responsive distribution network. Sourcing Decisions in Supply Chain: Role of sourcing in a supply chain, Inhouse or outsource, supplier selection-auctions and negotiations, sharing risk and reward in the supply chain.

AUTOMOTIVE TRANSMISSION (PE-II)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE750ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Outcomes
The objective of this course is to	On completion of the course, students will be able
-	to
Study the various components	1. Calculation of gear and evaluate
of the transmission system of	performance characteristics in different
an automobile.	types of gear boxes
	2. Describe the construction and working of
	various types of planetary gear boxes
	3. Explain the working of advanced Fluid
	coupling and hydraulic transmission
	systems.
	4. Explain various types of advanced automatic
	transmission system
	5. Understand the basic terminology of
	Modern electric drive and summarize various
	hydrostatic drive systems.

UNIT - I

Gear Box: method of calculation of gear ratios for vehicles, performance characteristics in different speeds, different types of gear boxes, speed synchronizing devices, gear materials, lubrication.

UNIT - II

Spur and internal gear type planetary gearboxes, Ford T-model, Cotal and Wilson Gear box, determination of gear ratios, automatic overdrives.

UNIT - III

Fluid coupling: advantages and limitations, construction details, torque capacity, slip in fluid coupling, performance characteristics. Means used to reduce drag torque in fluid coupling.

Principal of torque conversion, single, multi stage and poly phase torque converters, performance characteristics, constructional and operational details of typical hydraulic transmission drives (e.g.) Leyland, White Hydro torque drives.

UNIT - IV

Automatic transmission: relative merits and demerits when compared to conventional transmission, automatic control of gears, study of typical automatic transmissions, Ford and Chevrolet drive, and automatic control of gear box.

UNIT - V

Hydrostatic drives: advantages and disadvantages, principles of hydrostatic drive systems, construction and working of typical hydrostatic drives, Janney Hydrostatic drive. Electrical drives: advantages and limitations, principles of Ward Leonard system of control, Modern electric drive for buses and performance characteristics.

Learning Resources:

THEORY OF ELASTICITY (PE-III)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE760ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE	COURSE OUTCOMES			
The objective of the	On completion of the course, students will be			
course is to	able to			
understand elasticity,	1 understand the concept of stress and			
various elastic constants,	significance of principal stresses.			
stress-strain relations	2 determine the stresses which produce volume			
and usage of various	change and shape change of the material for			
theories of failure.	the applied loading conditions.			
	3 understand the concept of strain and			
	significance of principal strains.			
	4 understand the 3-dimensional stress-strain			
	relationships of anisotropic, orthotropic and			
	isotropic materials.			
	5 calculate the strength of materials using			
	various theories and representation using			
	stress space diagram.			

UNIT-I: BASIC CONCEPTS OF STRESS

Definition, State of stress at a point, stress tensor, invariants of stress tensor, principal stresses, stress ellipsoid.

UNIT-II: ANALYSIS OF STRESS

Derivation for maximum shear stress and planes of maximum shear stress, octahedral shear stress, deviatoric and hydrostatic components of stress, invariance of deviatoric stress tensor, plane stress.

UNIT-III: ANALYSIS OF STRAIN

Deformation tensor, strain tensor and rotation tensor; invariants of strain tensor, principal strains, derivation for maximum shear strain and planes of maximum shear strain, octahedral shear strain, deviatoric and hydrostatic

components of strain tensor, invariance of deviatoric strain tensor, plane strain.

UNIT-IV: STRESS-STRAIN RELATIONS

Stress-strain relationships for an isotropic body for three dimensional stress space for plane stress and plane strain conditions, differential equations of equilibrium, compatibility equations, material (D) matrix for Orthotropic Materials.

UNIT-V: STRESS-STRAIN REPRSENTATION

True stress and true strain, Von-Mise's and Tresca yield criteria, Haigh-Westergard stress space representation of Von-Mise's and Tresca yield criteria, effective stress and effective strain.

NANO TECHNOLOGY (PE-III)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE770ME		
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours		

	COURCE OUTCOMES
COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
learn nano scale properties, various nano materials and structures along with corresponding nano fabrication techniques, nano tribology, special nano materials and nano bio materials.	 identify the basic concepts in nano technology and their importance Analyze Various properties and microstructure of Nano materials Interpret Zero and One dimensional Nano structures and their applications Study various Nano Material Fabrication Techniques and their advantages
	5 comprehend the engineering
	applications of special nano materials and nano bio materials

UNIT - I

Introduction: Nanoscale, Properties at Nanoscale, advantages and disadvantages, importance and challenges in Nanotechnology.

UNIT - II

Materials: Introduction, Si-based materials, Ge-based materials, Ferroelectric materials, Polymer materials, GaAs& InP (HI-V) group materials, Nanotribology and materials.

UNIT - III

Nano Structures: Zero dimensional Nanostructure, synthesis procedure by heterogeneous method, characterization techniques, properties and applications of Nano particles

One dimensional Nanostructures: Synthesis procedure, characterization procedure and principles involved, properties and applications of Nano Wires.

UNIT - IV

Nano Fabrication: Introduction, Basic fabrication techniques by Lithography and doping, MEMS fabrication techniques, Nano fabrication techniques by Ebeam, Nano-imprint fabrication, Epitaxy and strain engineering

UNIT - V

Special Nano Materials: Introduction, Synthesis procedure by metal-polymer, Characterization procedures, applications

Nano Biomaterials: Introduction, Biocompatibility, anti-bacterial activity, applications

Learning Resources:

- 1. Willia Tllsey Atkinson, "Nano Technology", Jaico Publishing House
- 2. George W. Hanson, "Fundamentals of Nanoelectronics", Pearson Education, 2009
- 3. T. Pradeep, "Nano: Essentials-understanding Nano Science and Technology" TMH 2009

ADVANCED IC ENGINES (PE-III)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE780ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course Objectives	Course Outcomes
The objectives of this	At the end of the course student shall be able
course are	to
	1. Understand the combustion phenomena of
To study the working	SI engines and identify various factors
principles of operation and	influencing the combustion process.
combustion process of	2. Understand the combustion phenomena of
different I.C. Engines.	CI engines and identify various factors
	influencing the combustion process.
To provide knowledge on	3. Identify various pollutants in the
pollutant formation,	combustion process of Internal Combustion
control, alternate fuels and	Engines and study emission norms.
new developments in I.C.	4. Study the feasibility of alternative fuels
Engines.	available to replace existing fuels in IC
	Engines.
	5. Study new technologies in the field of
	Internal Combustion Engines.

UNIT-I

Introduction to I.C. Engines: Combustion Engine, Classification into External and Internal Combustion Engines, Sub classification of I C Engines on the basis of different considerations.

Combustion in S.I. Engine: Stages of combustion in S.I. Engines, effect of engine variables on ignition lag, effect of engine variables on flame propagation, Abnormal combustion, effects of detonation, effects of engine variables on knock or detonation, control of detonation, Primary Standard Reference Fuels, Octane Number, SI engine combustion chamber design principles and types of combustion chambers in SI engines.

UNIT-II

Combustion in C.I. Engine: Combustion in the C.I. Engines, stages of combustion, delay period or ignition lag, variables affecting delay period,

diesel knock, factors tending to reduce knocking in SI and CI engines, methods of controlling diesel knock, Primary Standard Reference Fuels, Cetane Number, CI engine combustion chambers, methods of generating air swirl in the CI engine.

UNIT-III:

Pollutant Formation and Control: Pollutants – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbons, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Emission norms.

UNIT-IV

Alternative Fuels: Introduction, Merits and demerits: Liquid fuels (Methanol and Ethanol), Gaseous fuels (Hydrogen, Natural gas and Liquefied Petroleum Gas) and Bio-diesels.

UNIT-V

Recent Trends in I. C. Engines: Super charging and Turbo charging in I.C. Engines, Dual fuel and multi fuels engines, Lean Burn Engines, Stratified Charge Engines, homogeneous charge compression ignition (HCCI) Engines, Multi Point Fuel Injection (MPFI) systems, and Gasoline Direct Injection (GDI) concepts.

PRODUCTION AND OPERATIONS MANAGEMENT (PE-III)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE790ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Out comes
The objectives of this course are to: study the	On completion of the course, the student will be able to:
types of plant layout, forecasting methods, cost analysis, inventory control	classify the types of plant layouts, production systems based on product using the facilities of the plant
and project management.	estimate the future demand using forecasting methods through qualitative and quantitative models
	3. determine the requirement of resources to minimise the total cost using aggregate planning techniques.
	4. determine the optimal maintenance of inventory to minimise the total cost using different inventory models.
	5. construct network models to estimate the project completion time using PERT and CPM techniques.

Unit- I

Production & Operations Management: Introduction, Types of Production Systems – Job shop, Batch, Flow shop. Types of business organizations and organization structures. Calculations on productivity. Capacity planning and process planning calculations

Plant location and layout: Factors affecting plant location, Break even analysis, plant layout objectives, types of layouts, merits and demerits.

Unit- II

Forecasting: Introduction, forecasting objectives and uses, demand patterns, qualitative models – market survey, delphi, quantitative models – moving average, weighted moving average, simple exponential smoothing, trend

adjusted exponential smoothing, least square method, simple regression, multiple regression.

Forecast Errors: mean absolute deviation (MAD), mean square error (MSE), Mean Forecast Error (MFE), mean absolute percentage Error (MAPE)

Work Study: Introduction to method study and work measurement, standard time calculations, methods of rating, work sampling.

Unit- III

Costs: Elements of Cost, overheads, determination of selling price of a product.

Aggregate planning and master scheduling: Introduction, objectives of aggregate planning, cost in aggregate planning, strategies in aggregate planning, master production scheduling.

Materials requirement planning MRP: Importance of MRP, MRP system inputs and outputs, MRP calculations.

Calculations of net amount required(units) and planned order releases in BOM structures.

Unit- IV

Inventory Control: Importance of inventory control, types of inventory models, inventory costs deterministic inventory models – basic EOQ model derivation, production model without shortages, purchase model with instantaneous replenishment and with shortages, production model with shortages, inventory model with price breaks, fixed order quality system, periodic review system, Probabilistic inventory models, determination of safety stock in deterministic and probabilistic inventory models, ABC and VED analysis, problems on ABC analysis.

Unit-V

Project Management: Network fundamentals, differences between PERT and CPM, scheduling the activities, Fulkerson's rule, Earliest and Latest times, determination of ES and EF in forward path, LS & LF in backward path, determination of critical path, Free float, independent float, Total float, program evaluation and review technique, crashing of network.

VEHICLE DYNAMICS (PE-III)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE712ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Outcomes	
The objective of this course is to	On completion of the course, students	
-	will be able to	
understand vibration response	1. Understand the basics of vibration,	
characteristics and stability of	when the vehicle is at dynamic	
dynamic systems and Analyze	condition.	
the damped, undamped vibration	2. Derive the effective cornering	
system in an Automotive	stiffness when considering the elastic	
	elements in the wheel suspension	
	and be able to analyze effect on the	
	dynamic characteristics of the vehicle	
	3. Understand the tyre dynamics with	
	respect to force & moments	
	4. Evaluate the Numerical methods for	
	multi degree of freedom systems	
	with different theories	
	5. Understand the various vibration	
	measuring instruments.	

UNIT-I

Fundamentals of Vibration: Introduction, classification of vibration: free and forced vibration, undamped and damped vibration, response of damped and undamped systems under harmonic force, analysis of single degree and two degree of freedom systems, torsional vibration, determination of natural frequencies.

UNIT-II

Vehicle Vibrations: Vehicle vibration with single degree of freedom free vibration, forced vibration, vibration due to road roughness, vibration due to engine unbalance, transmissibility of engine mounting vibration with two

degree of freedom, free vibration, compensated suspension systems forced vibration.

UNIT-III

Different types of tyres - Materials used: Tyre construction, physics of tyre traction on dry and wet surface, tyre traction on dry and wet surface, tyre forces and moments, SAE recommended terminologies of tyre road interaction.

UNIT-IV

Numerical methods for multi degree of freedom systems: Methods, influence coefficient. Maxwell's reciprocal theorem. Dunkley's equation, orthogonality principle, method of matrix iteration - method of determination of all the natural frequencies using sweeping matrix and orthogonality principle, Holzer's method for systems with free, fixed free and fixed ends.

UNIT-V

Vibration measuring instruments - Accelerometers and vibrometers, whirling of shafts with and without air damping, discussion of speeds above and below critical speeds.

Learning Resources:

CONTROL SYSTEMS THEORY (PE-IV)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE713ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE	COURSE OUTCOMES
The objective of the course is to	On completion of the course, students will be able to
describe physical systems through mathematical models and graphical representations and assess their response and stability in frequency and time domains and design suitable control methods.	 develop Transfer functions for various systems using mathematical modelling. simplify the systems given in pictorial representation and examine the steady state and transient behavior. estimate the system behaviour using Routh criterion, Root locus and Bode diagrams. assess the frequency response of the control systems using Polar and Nyquist plot and explain the principle of compensators. model the system in state space domain and test for controllability and observability.

UNIT-I: CONTROL SYSTEMS CLASSIFICATION

Examples of control systems, Open Loop & Closed Loop Systems. Mathematical models and Transfer functions from governing equations of mechanical, electrical, hydraulic, pneumatic, and thermal systems. Force-Voltage and Force-Current analogy.

UNIT-II

Block diagrams, Block diagram reduction. Signal flow graphs, Mason's gain formula. Transient response of first order system to step, ramp, parabolic and impulse inputs. Time domain specifications of second order systems, Response of second order systems to Step input. Steady state error, static and dynamic error coefficients, sensitivity.

UNIT-III

Routh stability criteria, Root Locus method for negative feedback systems.

Frequency Response, Bode plots. Experimental determination of transfer functions.

UNIT-IV

Polar and Nyquist plots, Nyquist stability criteria. Gain and phase margins.

Introduction to compensator design (**qualitative treatment only**): Lead, Lag and lag–lead compensators.

PID controller, correlation between transient and frequency response.

UNIT-V

State—space representation of linear control systems. Conversion of transfer function into state space, conversion of state-space into transfer function, solution of state equations by Laplace transformation technique and time domain technique. State transition matrix. Zero input response and zero state response. Concept of controllability and observability.

ADDITIVE MANUFACTURING TECHNOLOGIES (PE-IV)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE714ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE	COURSE OUTCOMES	
The objective of the	On completion of the course, students will be	
course is to	able to	
understand the fundamentals of various additive manufacturing technologies, learn different types of liquid, solid and powder based AM systems, discuss rapid tooling, applications of AM systems.	1 understand the fundamentals of Additive manufacturing Technologies to analyze Problems.	
	2 study the principle, process, advantages, limitations and case studies of liquid-based AM systems.	
	3 study the principle, process, advantages, limitations and case studies of solid based AM systems.	
	4 study the principle, process, advantages, limitations, and case studies of powder-based AM systems.	
	5 study the applications of AMT in rapid tooling, medical, Bio and other engineering industries.	

UNIT-I: INTRODUCTION

Prototyping fundamentals, Historical development, Fundamentals of rapid prototyping, Advantages of Rapid prototyping, commonly used terms, Rapid prototyping process chain, 3D modeling, Data Conversion, and transmission, Checking and preparing, Building, Post processing, AM data formats, Classification of AM processes.

UNIT-II: LIQUID BASED AM SYSTEMS

Stereo lithography Apparatus (SLA): Models and specifications, Process, working principle, photopolymers, Photopolymerization, Layering technology, laser and laser scanning, Applications, Advantages and disadvantages, Case studies.

Solid ground curing (SGC): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies.

UNIT-III: SOLID BASED AM SYSTEMS

Laminated object manufacturing (LOM): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies. Fused Deposition Modeling (FDM): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies.

UNIT-IV: POWDER BASED AM SYSTEMS

Selective laser sintering (SLS): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies.

Three-dimensional printing (3DP): Models and specifications, Process, Working principle, Applications, Advantages and disadvantages, Case studies.

UNIT-V

Rapid Tooling: Introduction to RT, conventional tooling v/s RT, need for RT, RT classification: Indirect RT methods: spray metal deposition, RTV epoxy tools, ceramic tools, Investment casting, spin casting, die casting, sand casting, 3Dkeltool process. Direct RT: direct AIM, LOM tools, DTM RT process, EOS direct tool process and direct metal tooling using 3DP.

Applications of AM systems: Application – material relationship, Application in design, Application in engineering, analysis and planning, aerospace industry, automotive industry, jewelry industry, coin industry, GIS Application, arts and architecture.

RP medical and bio engineering Application: planning and simulation of complex surgery, customized implant and prosthesis, design and production of medical devices, forensic science and anthropology, visualization of biomolecules.

RENEWABLE ENERGY SYSTEMS (PE-IV)

SYLLABUS FOR B.F.VII-SEMESTER

L:T:P(Hrs/week):3:0:0	SEE Marks:60	Course Code: U19PE715ME
Credits :03	CIE Marks:40	Duration of SEE:03Hours

COURSE	COURSE OUTCOMES
OBJECTIVES	On completion of the course, students will be able to
The objective of this	
course is to	
study the availability and applications of various renewable energy systems like solar energy, wind energy, geothermal energy, ocean thermal energy, tidal and wave energy, fuel cell energy and biomass energy.	 Illustrate the constructional details and working of solar energy conversion devices for various heating and cooling applications. describe the working of different wind and geothermal energy conversion systems used for power generation. explain the working of ocean thermal, tidal and wave energy power plants for power generation. illustrate the constructional details, working and applications of different fuel cells. discuss the constructional details, working of different types of bio gas plants for domestic cooking and other applications.

UNIT I

Solar Energy: Availability of solar energy, Measurement of sunshine, solar radiation data, estimation of average solar radiation, solar energy selection, selective surfaces, constructional details and working of solar flat plate and evacuated tube collectors, solar heating and cooling; other solar thermal applications.

Photo-voltaic Energy: Solar cells - Photo-voltaic conversion efficiency, performance characteristics of solar cells as a function of light intensity, temperature and cell area, solar cell module and arrays.

UNIT II

Wind Energy: Wind mills and wind turbine systems; classification of wind machines: horizontal & vertical axis configuration; High and low solidity rotors, elements of wind mills and wind turbine systems; Site selection to establish wind turbine power plants, Aerodynamic models, Rankine Froud Actuator disc model.

Geothermal Energy: Earth as source of heat energy; Nature of Geothermal Fields, Geothermal sources. Hydrothermal sources; vapor dominated systems; Liquid dominated systems. Petro thermal systems and Geo pressure systems.

UNIT III

Ocean Thermal Energy: Ocean thermal energy sources, Ocean thermal energy power plant development; Closed and open cycles: advantages and operating difficulties.

Tidal Energy: Classification and working of Tidal power plants, Limitations of Tidal energy.

Ocean Wave Energy Technology: Classification of wave energy conversion devices; working of heaving float type, pitching type, heaving and pitching float type, oscillating water column type and surge devices.

UNIT IV

Fuel Cell Energy: Description, classification and operation of fuel cells; major components & general characteristics of fuel cells; working of Alkaline Fuel Cell, Direct Methanol Fuel Cell, Phosphoric Acid Fuel Cell, Solid Oxide Fuel Cell, Proton/Polymer exchange membrane fuel cell molten carbonate fuel cell systems.

UNIT V

Bio-mass Energy: conversion techniques for the production of liquid and gaseous fuels by bio-chemical methods - types of feed stock, constructional details and working of fixed dome, flexible bag and floating dome type bio gas plants, Digester design considerations of bio-gas plants.

Learning Resources:

Department of Mechanical Engineering VALUE ANALYSIS AND VALUE ENGINEERING (PE-IV)

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE716ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course Objectives	Course outcomes
The objectives of this course are to: 1. understand the importance of value engineering and its	On completion of the course the student will be able to: 1. applying the concept of engineering to their field of
application in their respective fieldsfamiliarize with the procedure of Value analysis and value engineering	engineering. 2. analyze the procedure of value analysis and value engineering and various phases of it. 3. auditing of value engineering and
3. implementation: of value engineering and how to get a certificate?	procedure for its certification

UNIT-I

Introduction: Meaning of Value Engineering (VE), Difference from other initiatives, Value and its types, Relationship between value vis-à-vis person, time and environment, History of Value Engineering / Value Analysis / Value Management, World bodies of Value Engineering & their activities, Multi-disciplinary team approach in Value Engineering study.

VALUE ENGINEERING JOB PLAN: Introduction, comparison of job plans of various value engineering. Finance and human relations in VE.

UNIT-II

ORIENTATION PHASE: training associates in Value Analysis and Value Engineering (VAVE). Different trainings and certifications available in VAVE, Method to conduct VAVE studies.

INFORMATION PHASE: information needed for VAVE, Method to collect and analyze information, ABC Analysis, Pareto Analysis, Breakeven analysis.

UNIT-III

FUNCTION ANALYSIS PHASE: Breakdown item into elements and subelements, questions to be asked, introduction to functions, practice session, types of functions (use and sell function), levels of function (basic and secondary), identify various functions, elements of cost, procedure for cost allocation, cost allocation to function, concept of worth, process flow for determining worth, discussions on worth, meaning of FAST, use of FAST, development history of FAST, different types of FAST. Ground rules of FAST, FAST diagram.

UNIT-IIV

CREATIVE PHASE: Definition of creativity, misconceptions about creativity, introduction to creative techniques like TRIZ, 3P, lateral adoption and others **EVALUATION PHASE:** selection of criteria, feasibility analysis, weighted evaluation methods, decision matrix.

UNIT-V

RECOMMENDATION PHASE: Need for recommendation, method to make presentation, impact analysis and justification report, implementation plan, presentation skills.

IMPLEMENTATION PHASE: Detailed design, verification and validation, certification, change implementation.

AUDIT PHASE: Need for audit, types of audit, how to do audit.

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE717ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives The objective of this course is to	Course Outcomes On completion of the course, students will be able to
Study of different types of vehicle body structures and load acting.	 Understand the constructional details, different types of car body and safety aspects. Describe the layout and types of bus body. Analyze the stresses acting on the structure by understanding the load distribution. Understand the design of the car body and driver's safety aspects. Explain the various types of materials and painting techniques used in automobiles

UNIT-I

Car body details: Types of Car body – Saloon, convertibles, Limousine, Estate Van, Racing and Sports car – Visibility regulations, driver's visibility, improvement in visibility and tests for visibility. Driver seat design -Car body construction-Various panels in car bodies. Safety aspect of car body.

UNIT-II

Types of bus body details: based on capacity, distance travelled and based on construction.— Bus body layout for various types, Types of metal sections used — Regulations — Constructional details: Conventional and integral. Driver seat design- Safety aspect of bus body.

UNIT-III

Load Distribution: Types of load carrying structures -closed, integral, open, flat types. Calculation of loading cases- static, asymmetric, vertical loads. Load distribution, stress analysis of structure, body shell analysis.

UNIT-IV

Body: Body design requirement, car body space nomenclature. Body frame of passenger car and commercial vehicle. Different type of car door and window regulator, car roof, wind shield, car seats and their various design. Safety aspect: Driver's safety, use of air bag and their details.

UNIT-V

Body materials: Different types of ferrous and non-ferrous materials used in vehicle such as cast iron. Steel. Alloy steel, plastic, GR.P.Glass etc. and their properties Painting: Corrosion and anticorrosion metho. Paint and painting process

ECONOMICS AND FINANCE FOR ENGINEERS

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 2:0:0	SEE Marks:60	Course Code: U19HS040EH
Credits: 02	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Outcomes
The objective of this course is to	On completion of the course, students will be
	able to
The objective of the Course is to equip the prospective engineers with the concepts and tools of economics, finance. Cost and	 Enable students to identify the essential components of demand and supply to decide upon the production quantities.
taxes that facilitate decisions at the work place.	2. Facilitate in deciding an appropriate price through the identification of the areas of cost control.
	3. Make better investment decisions both in short and long run by understanding the financial viability of given investment proposals in the wake of limited resources and manage routine business financial requirements.
	4. Analyze the given financial statements of a firm to understand the past performance and to make decisions for future.5. Identify the impact of the new tax policies on the company's financial structure individuals' incomes.

UNIT-I

Basics of Economics:

Scarcity Definition of Economics and its cntic1sms - Macro and Micro Economics - Managerial Economics - Nature and Scope of Managerial Economics - Meaning of a Firm and Industry - Demand concept and its determinants - Law of Demand with its assumptions and exceptions - Price elasticity of demand and its types, Income elasticity - Cross elasticity - Advertising elasticity - Meaning of Supply - Equilibrium Price and Quantity

- Production - Meaning of Production and Production function - Types of Production function - Economies of Scale. (Simple problems on computation of Price elasticity)

UNIT-II

Cost and Price:

Cost- Meaning- Types of Costs- Cost Sheet- Break- even Analysis- Methods of Pricing (Problems on Cost Sheet and Breakeven Analysis can be asked).

UNIT-III

Sources and uses of Finance:

Capital Budgeting - Discounting and Non-discounting Techniques (including simple problems) - Working Capital Management - Concepts and Components of Working Capital - Determinants of working capital - Sources of finance (long term and short term).

UNIT-IV

Understanding Financial Statements:

Financial Statements - Meaning - Types- Purpose - Ratios (Liquidity, Solvency, activity &

Profitability Ratios including problems)

UNIT-IV

Direct & Indirect Taxes:

Income tax - Heads of Income - Income from Salaries - Income from House Property - Income from Business or Profession - Income from Capital Gains - Income from Other Sources- Old and New regime tax rates and calculation of tax(Latest Tax Rates)- GST- Introduction to GST- CGST - SGST- IGST (Simple problems on Computation of Salaries and House property and Final tax computation)

understand the CAE software applicability for analyzing structural and thermal problems and correlate mathematical formulation using FE method.	select appropriate finite element and solve1-D,2-D and 3-D staticstructural problems. Perform Modal, Harmonic and Transient analysis on beams. select appropriate finite element and solve 1-D,2-D thermal problems. Understand the importing of complex models from modelling software and perform analysis using FE software.

List of Experiments

I. CAE Lab

- 1. Introduction to FEA software. Analysis using 1-d bar elements.
- 2. Analysis of Trusses
- 3. Analysis of Beams with different boundary conditions
- 4. Analysis of Beams with different loading conditions
- 5. Analysis of Plane stress and Plane strain problems
- 6. Analysis of axi-symmetric problems
- 7. Analysis of three dimensional objects by modeling them in FEA software
- 8. Modal Analysis of Beams.

- 9. Harmonic Analysis of Beams
- 10. Transient Analysis of Beams
- 11. Steady state Heat Transfer Analysis of a composite wall and a Fin
- 12. Developing a 3-D Model in a modeling software and analyzing it by importing into FEA software
- 13. Demonstration of non-linear trash analysis.
- 14. Dynamic analysis of mechanisms

From the above experiments, each student should perform at least 12 (Twelve) experiments.

PROJECT SEMINAR

SYLLABUS FOR B.E.VII-SEMESTER

L:T:P(Hrs/week): 0:0:2	SEE Marks:	Course Code: U19PW719ME
Credits: 01	CIE Marks:30	Duration of SEE:

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOME On completion of the course, students will be able to
actively involve the students in the initial work required to undertake the final year project.	 do the literature search to identify the project. define the problems understand tools and techniques to be used in the project design, manufacturing and analysis of the chosen project.

The objective of the project seminar is to actively involve the students in the initial work required to undertake the final year project. It may comprise of:

- 1. Problem definition and specifications.
- 2. A broad understanding of the available techniques to solve a problem of interest.
- 3. Presentation (oral and written) of the project.
- 4. Submission of brief report.

The Department can initiate the work related to project allotment at the end of III year II semester and complete it in the first two weeks of the fourth year I semester.

First 4 weeks of IV year Ist semester will be spent on special lectures by faculty members, research scholar and speakers from industries and R&D institutions. The objective of these talks is to expose students to real life / practical problems and methodologies to solve them.

A seminar schedule will be prepared by the coordinator for all the students. It should be from the 5^{th} week to the last week of the semester and should be strictly adhered to.

Each student will be required to

- 1. Submit a one page synopsis of the seminar to be delivered.
- 2. Give a 20 minute presentation followed by 10 minutes discussion.
- 3. Submit a technical write up on the talk delivered.

At least two teachers will be associated with the evaluation of the project seminar for the award of the sessional marks which should be on the basis of performance of all the three items stated above.

No. of Presentations	1	Max. Marks for presentation:	30		
Marks will be awarded based on synopsis, presentation and write-up using rubrics.					
Duration of Presentation: 20 i	min

product planning and product life cycle management.	4 describe the interaction between design, manufacture, quality, testing and introducing new products.
	5 Learn new concepts in product development and life cycle management.

UNIT - I

Product Design and Process Design functions. Selection of right product. Systematic procedure of product innovation. Factors contributing to successful technological innovation – need for creativity and innovation. Techniques of innovation like brain storming and Delphi techniques.

UNIT - II

Project selection and evaluation: Function of design — Design with Human Machine Interaction (HMI), Collection of ideas and purpose of project. Selection criteria — screening ideas for new products using evaluation techniques. Principles of ergonomics.

UNIT - III

New Product Development: Research and new product development. Patents, definitions, patent search, patent laws, international code for patents – Intellectual Property Rights (IPR).

UNIT - IV

New Product Planning: Interaction between the functions of design, manufacture, quality, testing, and marketing. Steps for introducing new products after evaluation.

UNIT - V

Concepts in product development: estimation of costs for manufacture. Value engineering in product design, group technology, concepts of concurrent engineering.

Product life cycle management: Definition, PLM Life cycle model, threads of PLM, need for PLM, opportunities and benefits of PLM, views, components and phases of PLM, PLM feasibility study, PLM visioning.

INTRODUCTION TO FLEXIBLE MANUFACTURING SYSTEMS (PE-V)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE820ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COLLEGE OBJECTIVE	COURCE OUTCOMES		
COURSE OBJECTIVE	COURSE OUTCOMES		
The objective of the	On completion of the course, students will be able to		
course is to	,		
1 to understand all the various aspects of flexible manufacturing systems and analyze the various systems of FMS.	 Interpret the meaning and understand the importance and utility of various layouts Specify equipment for FMS operations after detailed study through group technology process planning and Plan for FMS operations and its schemes using JIT etc. Study the Various Manufacturing, Cleaning and Quality control aspects of FMS. Distinguish material handling requirements for traditional manufacture and those needed in FMS 		
	environment Specify the hardware and software requirements and integrate different subsystems		

UNIT-I: EVOLUTION OF MANUFACTURING SYSTEMS

FMS definition and description, General FMS considerations, Manufacturing cells, Cellular versus Flexible Manufacturing. Systems Planning: Objective, introduction planning, preparation guidelines, the project team, supplier selection, system description and sizing, facility preparation planning, FMS layouts. Human resources: staff considerations, team work, communication and involvement, the supervisor's role, personnel selection, job classifications, employee training.

UNIT-II: MANUFACTURING'S DRIVING FORCE

Definition, description and characteristics. Just in-time manufacturing, definition and description, benefits and relationship to FMS, implementation cornerstones, quality and quantity application principlesGroup Technology: Concepts, classification and coding, benefits and relationship to FMS, design of group technology using rank order clustering technique.

UNIT-III: FMS DESIGN — USING BOTTLENECK, EXTENDED BOTTLENECK MODELS, PROCESSING AND QUALITY ASSURANCE

Turning centres, Machining centre, construction and operations performed, axes, programming, and format information, work-holding and work-changing equipment,

automated features and capabilities, cleaning and deburring – station types and operation description, importance to automated manufacturing, coordinate measuring machines, types, construction and general function, operation cycle description, importance to flexible cells and systems.

UNIT-IV: AUTOMATED MOVEMENT AND STORAGE SYSTEMS

AGVs, Robots, automated storage and retrieval systems, storage space design, queuing carousels and automatic work changers, coolant and chip Disposal and recovery systems, auxiliary support equipment, cutting tools and tool Management – introduction, getting control of cutting tools, Tool Management, tool strategies, data transfer, tool monitoring and fault detection, guidelines, work holding considerations, General fixturing, Modular fixturing. FMS and the relationship with workstations – Manual, automated and transfer lines design aspects.

UNIT-V: FMS

Computer Hardware, Software, Communications networks and Nanotechnology – general functions, and manufacturing usages, hardware configuration, programmable logic controllers, cell controllers, communications networks. FMS implementation.

POWER PLANT ENGINEERING (PE-V)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE830ME		
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours		

COURSE OBJECTIVE The objective of the course is to	COURSE OUTCOMES On completion of the course, students will be able to
impart knowledge on various sources of energy, types of power plants, their working and economics of power generation.	 describe various sources of energy, working of steam power plant and fuel handling equipment. explain combustion processes, ash handling systems and cooling towers of steam power plant. analyze principles and working of hydro-electric power plant. describe principles and working of nuclear power plant. estimate the cost of power generation and the environmental effects of power plants.

UNIT – I

Introduction to sources of Energy: Resources and development of Power in India. Principles of power generation for various conventional and non-conventional power plants.

Steam Power plant: selection of site for a thermal power plant, Plant Layout, Working of different circuits, Types of Coal, Properties of Coal, Coal Handling, Fuel handling equipment and their choice, Coal storage systems.

UNIT-II

Combustion Process: Overfeed and underfeed fuel beds, Travelling grate stokers, Spreader stokers, Retort stokers, Pulverized fuel burning systems and its components, working principle of Cyclone furnace, Ash Handling Systems, draught system, Dust collectors.

Cooling Towers and Heat rejection, Corrosion and feed water treatment.

UNIT-III:

HYDRO ELECTRIC POWER PLANT

Hydroelectric Power Plant:

Water Power, Hydrological Cycle, measurement of run-off, selection of site for a hydro electric power plant, Essential features of a hydro power plant.

Hydrographs, Flow duration curve and mass curve-related numerical problems, Storage and Pondage, Classification of dams and spillways.

UNIT-IV: NUCLEAR POWER PLANT

selection of site for a nuclear power plant, Nuclear fuels, conversion and breeding, fertile materials, methods of enriching uranium, Nuclear Reactors, working of reactors, Pressurized water reactor, Boiling Water Reactor, Sodium Graphite Reactor, Fast Breeder Reactor, Gas cooled Reactor, Radiation Hazards and Shielding, Radioactive waste disposal.

UNIT-V

Power plant Economics and Environmental considerations

Capital cost, Investment of fixed charges, Operating costs, General arrangement of power distribution, Load curves, Average Load and Load Factor, Delivery Factor, Related exercises.

Effluents from Power plants and impact on environment Pollutants and Pollution standards, Methods of Pollution control.

OPTIMIZATION TECHNIQUES (PE-V)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE840ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE The objective of the	COURSE OUTCOMES On completion of the course, students will be able to			
course is to	on completion of the course, students will be usic to			
understand the importance of optimization to various practical problems and solve them with simple mathematical techniques.	 apply the concept of simple mathematics for practical problem to find the best solution to it. analyze the one Dimensional problem and their application to Mechanical engineering to minimize/maximize the objective function. Evaluate the objective functions for constrained/unconstrained situation for optimization. Demonstrate the concept of dynamic programming techniques to solve day to day problems in a production shop floor. 			

UNIT-I

Introduction: Engineering applications, Statement of optimization, classification of optimization.

Classical optimization: Single variable, multi variable with and with optimization. Mutli variable with inequality constraints Khun -Tucker conditions.

UNIT-II: ONE DIMENSIONAL MINIMIZATION

Uni-modal Function, Unrestricted search, Exhaustive search, Dichtomous search, Interval Halving method, Fibonacci and golden bisection Method, Newton and Quasi Newton method.

UNIT-III: NON LINEAR-UNCONSTRAINED OPTIMIZATION-I

classification, scaling of design variables, Random search methods, Universate search, pattern Directions, Hook Jeeves, Powel method, Rosenbrock method.

UNIT-IV: NON LINEAR-UNCONSTRAINED OPTIMIZATION-II

characteristics, Random search methods, complex method, sequential linear programming, Zoutendijk's method, Penality method,

UNIT-V

Dynamic programming: Multi stage decision processes, concept of sub optimization, few example problems like System reliability, Cargo loading problems,.

Integer programming: Gomory's cutting plane method, Branch and bound method.

AUTOMOTIVE AERODYNAMICS (PE-V)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks: 60	Course Code: U19PE850ME
Credits: 03	CIE Marks: 40	Duration of SEE: 03Hours

Course objectives	Course Outcomes		
The objective of this	On completion of the course, students will be		
course is to		able to	
Study the wind effect on	1.	Understand the basic fluid theory and of	
vehicles by automotive		vehicle aerodynamics.	
aerodynamics	2.	Analysis of aerodynamic drag And Apply	
		CFD to a range of problems	
	3. Analyzing the shape of the vehicle for		
	optimization and understand lift, drag ar		
	down force definitions and calculations		
	4. Evaluating and understanding of		
		aerodynamics in automotive with wind	
		effects	
	5.	Evaluating and explain the principles and	
		functions of Wind Tunnels for Automotive	
		Aerodynamic.	
		, ici da ji ici ici	

UNIT-I

Scope of automotive aerodynamics - historical development trends - Fundamental of fluid mechanics - Flow phenomenon related to vehicles - External & Internal flow problem - Resistance to vehicle motion - Performance - Fuel consumption and performance - Potential of vehicle aerodynamics.

UNIT-II

Aerodynamic Drag of Cars: Cars as a bluff body - Flow field around cardrag force - types of drag force - analysis of aerodynamic drag - drag coefficient of cars - strategies for aerodynamic development - low drag profiles.

UNIT-III

Shape Optimization of Cars: Front end modification - front and rear wind shield angle - Boat tailing - Hatch back, fast back and square back - Dust flow patterns at the rear - Effects of gap configuration - effect of fasteners.

UNIT-IV

Vehicle Handling - The origin offerees and moments on a vehicles - side wind problems - method to calculate forces and moments - vehicle dynamics under side winds - the effects of forces and moments - Characteristics offerees and moments - Dirt accumulation on the vehicle - Wind noise - drag reduction in commercial vehicles.

UNIT-V

Wind Tunnels For Automotive Aerodynamic: Principle of wind tunnel technology - Limitation of simulation - Stress with scale models - fill scale wind tunnels - measurement techniques - Equipment and transducers - road testing methods - Numerical methods.

Learning Resources:

COMPOSITE MATERIALS (PE-VI)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE860ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

COURSE OBJECTIVE	COURSE OUTCOMES
The objective of the	On completion of the course, students will be able to
course is to	
understand the basic principles and importance of composite materials and analyse the micro and macro mechanics of composite materials.	 Understand the importance of composite materials in Engineering applications Interpret the manufacturing of composites Analyse the composites for various elastic constants at macro level and micro level Understand the basic theories of failures associated with composites.
	5 Estimate and Calculate the strength of laminated composites.

UNIT-I: INTRODUCTION

Definition and classification of Composites (PMC, MMC, CMC), FRP Composites, Fiber Reinforcements: Fiber Types and its properties, Fiber Forms, matrix materials and its properties: Thermoset Matrices, Thermoplastic matrices, Applications of Composite Materials.

UNIT - II

Manufacturing Processes: Hand— Lay— Up, Spray technique Bag Molding, Autoclave processing, compression Molding, Resin Transfer Molding, Pultrusion, filament winding, Gel time test for resins, curing cycle.

UNIT-III: MICROMECHANICS OF COMPOSITES

Basic concepts: Volume and Mass fraction, Heterogeneous, Anisotropic, Orthotropic, Transversely Isotropic and Isotropic Materials.

Mechanical Properties: Prediction of Elastic constants, micromechanical approach, Halpin–Tsai equations.

Thermal properties: Thermal Expansion, Moisture Expansion, Transport Properties.

UNIT-IV: MACRO MECHANICS OF COMPOSITES

Elastic constants of a lamina, relations between engineering constants and reduced stiffness and compliances, variation of lamina properties with orientation, Classification of Laminated composites, analysis of laminated composites, stresses and strain with orientation, Inter laminar stresses and edge effects.

UNIT-V: STRENGTH OF ORTHOTROPIC LAMINA

Tensile and compressive strength of unidirectional fiber composites, fracture modes in composites, delamination failure, Maximum stress theory, maximum strain theory Tsai— Hill Criterion, Tsai— Wu Criterion.

Laminate Strength: First ply Failure, Fiber Failure, Truncated Maximum – Strain Criterion.

manufacturing, PLM	collaborative product development and gain				
strategy and	knowledge on Design and optimization of products.				
management.	5 Understand the importance of Digital manufacturing				
	and developing a PLM strategy and assessment.				

UNIT-I

Introduction to Product Life Cycle Management: Definition, PLM Lifecycle model, Threads of PLM, Need for PLM, Opportunities and benefits of PLM, Views, Components and Phases of PLM, PLM feasibility study, PLM visioning.

PLM Concepts, Processes and Workflow

Characteristics of PLM, Environment driving PLM,PLM Elements, Drivers of PLM, Conceptualization, Design, Development, Validation, Production, Support of PLM. Case study for PLM execution.

Unit-II

Product Data Management (PDM) Process and Workflow: PDM systems and importance, reason for implementing a PDM system, financial justification of PDM implementation. Versioning, check-in and checkout, views, Metadata, Lifecycle, and workflow. Applied problems and solution on PDM processes and workflow. Case study for implementation of PPM.

Unit-III

Collaborative Product Development : Engineering vaulting, product reuse, smart parts, engineering change management, Bill of materials and process

consistency, Digital mock-up and prototype development, design for environment, virtual testing and validation, marketing collateral, case studies.

Unit-IV

Tools of Communication for collaborative work : Creation of 3DXML and CAD drawing using CAD software. Creation of an animation for assembly instructions on 3D via composer, creation of an acrobat 3D document. Applied problems and solutions on tools of communication for collaborative work.

Knowledge and optimization of design products: Know how, best practices, parameterization of design, Applied problems and Solution on optimization of products using power copy, publication, parameters, formula, rule, check, design table, configuration, reaction.

Unit-V

Digital Manufacturing-PLM: Digital manufacturing, benefits manufacturing, manufacturing the first-one, Ramp up, virtual learning curve, manufacturing the rest, production planning.

Developing a PLM strategy and conducting a PLM assessment

Strategy, Impact of strategy, implementing a PLM strategy, PLM initiatives to support corporate objectives. Infrastructure assessment, assessment of current systems and applications, two corporate case studies.

Computational Fluid Dynamics (PE-VI)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE880ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Out comes
The objectives of this course are to: 1. equip the students with the	After completing the course, the student will be able to:
necessary governing equations to use computational techniques to solve problems related to fluid flow and heat transfer. 2. provide the essential numerical background for solving the partial differential equations governing the fluid flow and	 familiarize with the differential equations for fluid flow & heat transfer and apply numerical methods for their solution find solution of partial differential equations to estimate the behaviour of the flow phenomena. develop flow simulation code for heat transfer and fluid flow applications using FDM and FVM.
heat transfer	 4. make use of different iterative methods to solve algebraic equations for Heat transfer and fluid flows 5. apply suitable grid generation methods to decompose the fluid /solid domain for obtaining the numerical solution

UNIT - I

Introduction to computational Fluid flows, CFF applications, comparison amongst Numerical, Analytical and Experimental approaches.

Review of the basic fluid dynamics: Continuity, Momentum and Energy equations, Navier Stokes equations, Reynolds and Favre averaged N– S equations. Heat transfer conduction equation for steady and unsteady flows, steady convection— diffusion equation.

Unit- II

Classification of partial differential equations – Elliptic, parabolic and hyperbolic equations. Practical examples of elliptic, parabolic and hyperbolic partial differential equations, Well posed problem; Initial and boundary value problems.

Turbulence - Introduction, Mixing length model, K– epsilon turbulence model.

Unit- III

Concepts of Finite difference methods— forward, backward and central difference. Finite difference solution — 1-D steady state heat conduction without and with constant source term parabolic partial differential equations— Euler, Implicit method, Crank Nicholson method.

Errors, Consistency, Stability analysis – von Neumann analysis, Convergence criteria

Unit- IV

Solution of System of Linear Algebraic Equations: Tridiagonal matrix algorithm (TDMA): Thomas algorithm Iteration methods: Jacobi, Gauss-Seidel and ADI methods.

Viscous incompressible flow, stream function—Vorticity method.

Introduction to grid generation— Types of grid —Structured and Unstructured grids— O,H,C; Grid quality parameters: Aspect Ratio, grid density, skewness, tet Vs hex.

Unit-V

Introduction to finite volume method: Finite volume formulations for diffusion equation, 1-D steady state heat conduction without and with constant source term convection diffusion equation: Central difference scheme, Upwind scheme, Exponential scheme, power law scheme. Solution algorithm for pressure velocity coupling in steady flows staggered grid, SIMPLE Algorithm.

ARTIFICIAL INTELLIGENCE AND NEURAL NETWORKS (PE-VI)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE890ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

	COURSE OBJECTIVE The objective of this course is to		COURSE OUTCOMES completion of the course, students be able to
1. 2.	Introduce artificial intelligence and problem-solving search methods Present knowledge representation,	1.	Understand the concept of artificial intelligence and learn various search methods
3.	reasoning, planning and decision making Introduces neural network, artificial	2.	Discuss the knowledge representation, logic with sequential control of reasoning
	neuron, neuron properties, interference, learning algorithm along with functional models	3.	Analyze reasons under uncertainty with networks, and planning with sequential and complex decisions.
		4.	Understand the basic of neural networks, hybrid intelligence,
		5.	artificial neuron
			Interpret neural properties, node
			properties, learning algorithm,
			various functional models.

UNIT-I

AI and AI problem solving-Introduction to artificial Intelligence, Problem solving as state space search, Uniformed search

Problem solving by search-Heuristic search,Informed search, constraint satisfaction problems, Searching AND/OR graphs, Game playing, Minimax+Alpha-Beta.

UNIT-II

Knowledge representation and Reasoning-Introduction to knowledge representation, Propositional logic, First order logic -I, First order logic-II, Interference in first order logic-I, Interference in first order logic-II, Answer extraction, Procedural control of reasoning.

UNIT-III

Reason Under uncertainty- Reason Under uncertainty, Bayesian network, Decision network

Planning- Introduction to planning, Plan space planning, Planning graph and graph plan

Planning and decision making- Practical planning and acting, Sequential decision problems, Making complex decisions.

UNIT-IV

Introduction-Knowledge based information processing-A general view of knowledge based algorithm. Neural information processing. Hybrid intelligence-Artificial neuron.

UNIT-V

Basic Neuron computation models-Basic concepts of neural network-Network properties-Node properties-Sigmoid functions-System dynamics. Inference and learning algorithm. Data representation. Functional classification models- Single layer perceptions, multilayer perceptions.

UNMANNED AERIAL VEHICLES (PE-VI)

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week): 3:0:0	SEE Marks:60	Course Code: U19PE812ME
Credits: 03	CIE Marks:40	Duration of SEE: 03Hours

Course objectives	Course Outcomes
To understand fundamentals of Microprocessors and apply them for automobiles	After successfully completing the course students will be able to: 1. Describe microprocessor's components and 8085 microprocessor using the internal organization for the given specification instruction sets 2. Explain Assembly Language Programming to use in microprocessors 3. Interpret various data transfer schemes used in microprocessors 4. Explain various interfacing peripherals devices such as 8255, 8212, 8251,8255 and 8279 for microprocessors 5. Explain microcontroller application like temperature control, Engine coolant control, Power Windows, Wiper Control, Engine control

UNIT-I Introduction to UAV:

UAV: Definition, History; Difference between aircraft and UAV; DGCA Classification of UAVs; Types and Characteristics of Drones: Fixed, Multi-rotor, and Flapping Wing; Applications: Defense, Civil, Environmental monitoring.

UNIT-II Basics of Flight:

Different types of flight vehicles; Components and functions of an airplane; Forces acting on Airplane; Physical properties and structure of the atmosphere; Aerodynamics – aerofoil nomenclature, aerofoil characteristics, Angle of attack, Mach number, Lift and Drag, Propulsion and airplane structures.

UNIT-III

UAV Elements, Navigation and Guidance:

Components: Arms, motors, propellers, electronic speed controller (ESC), flight controller; Propulsion; Data Link; Sensors and Payloads: GPS, IMU, Light Detection and Ranging (LiDAR), Imaging cameras, Classification of payload based on applications; Hyper-spectral sensors; Laser Detection and Range (LADAR); Synthetic Aperture Radar (SAR); Thermal cameras; ultra-sonic detectors; Case study on payloads. Introduction to navigation systems and types of guidance; Mission Planning and Control.

UNIT-IV Design & Simulation of UAV:

Introduction to CAD; Design of UAV components; Structural Analysis using CAE; Manufacturing of the components of UAVs: 3D printing; Case studies – Design of nano size(hand held) multirotor UAV, design of landing gear for multirotor

UNIT-V

Aerodynamic analysis: Introduction to Modeling and CFD analysis of UAV, Multirotor Aerodynamic Interaction and Investigation, CFD Analysis – Multi rotor, Fixed Wing for materials carbon fiber, glass fiber; case study- Small Scale UAV wing design and CFD analysis to obtain maximum efficiency, Aerodynamic and stability analysis of VTOL.

Department of Mechanical Engineering

Project /Internship

SYLLABUS FOR B.E.VIII-SEMESTER

L:T:P(Hrs/week):: 0:0:12	SEE Marks: 50	Course Code: U19PW819ME
Credits: 6	CIE Marks: 50	Duration of SEE:

COURSE OBJECTIVE	COURSE OUTCOMES	
The objective of the course	On completion of the course, students will be	
is to	able to	
solve a real life problem	1. define the problem by literature study.	
related to Mechanical	2. design and conduct experiments using	
engineering using relevant	Mechanical Engineering tools to collect	
tools and techniques, write	data.	
a thesis and give a	3. analyze and interpret data using graphs.	
presentation.	4. make logical conclusions to justify the	
	results.	

The department will appoint a project coordinator who will be in-charge of the following.

- Grouping of students (Maximum of 3 in a group)
- Allotment of project guide
- Project progress monitoring at regular intervals
- Attendance monitoring for those students doing project in Industry/Internship.

The project allotment should be completed by the IV week of VII semester so that students get enough time for completion of their project.

All the projects are to be checked for progress at least twice in a semester. CIE marks (50 marks) are based on the performance in the two presentations which are awarded by a committee based on project rubrics.

The SEE marks (50 marks) are awarded by an external examiner based on a viva-voce exam.

Norms of final documentation of the project report will be provided by the Department.

With effect from the Academic Year 2022-23

No. of Presentations for	2	Max. Marks for each CIE	25		
CIE marks	presentation:				
Marks are awarded based on literature study, technical details, presentation					
and conclusions using rubrics.					
Duration of Presentation: 20 min
