COURSE OBJECTIVES	COURSE OUTCOMES
<i>The course will enable the students to :</i>	<i>At the end of the course students should be able to:</i>
1. <i>Study</i> the concepts and application of sampling distribution 2. <i>Describe</i> the role of the point estimation, interval estimation and Bayesian estimation about a parameter. 3. <i>Study</i> various methods of testing large samples. 4. <i>Analyze</i> standard statistical tests employed for small samples. 5. <i>Study</i> the difference between non-parametric and parametric tests.	1. <i>Apply</i> Central Limit Theorem to the real-world problems and calculate and interpret, in testing one sample mean (σ known). 2. <i>Apply</i> various estimators for estimating the parameters of standard distributions. 3. <i>Infer</i> properties of population conducting tests on samples 4. <i>Interpret</i> planned and unplanned comparisons for the one-way ANOVA. 5. <i>Solve</i> problems on the Sign test, Wilcoxon Signed test, Mann-Whitney U-test.
